## Latest Microsoft AZ-305 Test Questions & Reliable AZ-305 Study Plan

If you are quite worried about you exam and want to pass the exam successfully, you can choose us. AZ-305 training materials is high quality and valid. They can help you prepare for and pass your exam easily. We have experienced experts compile AZ-305 exam braindumps, therefore the quality can be guaranteed. Besides, AZ-305 Training Materials cover most knowledge points for the exam, and you can master most knowledge for the exam. We provide you with free update for one year for AZ-305 exam dumps, that is to say, you can obtain the latest information for the exam timely.

Microsoft AZ-305 is an exam that is designed for professionals who are seeking to validate their expertise in designing Microsoft Azure infrastructure solutions. AZ-305 exam is intended for individuals who have an in-depth understanding of cloud computing technologies and architectures, as well as the ability to design, deploy, and manage solutions that leverage Azure services.

Microsoft AZ-305 Exam covers a broad range of topics, including designing compute infrastructure, designing networking infrastructure, designing storage infrastructure, designing security and identity solutions, and designing solutions for business continuity. AZ-305 Exam consists of 40-60 multiple-choice questions that should be answered within 150 minutes. AZ-305 exam fee is \$165, and the certification is valid for two years. The Microsoft AZ-305 Exam is a challenging test that requires a thorough understanding of Azure infrastructure solutions, and passing AZ-305 exam is a significant accomplishment for any cloud architect.

## Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q253-Q258):

### NEW QUESTION # 253

You plan to move a web application named App1 from an on-premises data center to Azure.

App1 depends on a custom COM component that is installed on the host server.

You need to recommend a solution to host App1 in Azure. The solution must meet the following requirements:

App1 must be available to users if an Azure data center becomes unavailable.

Costs must be minimized.

What should you include in the recommendation?

- A. In two Azure regions, deploy a load balancer and a web app.
- **B. Deploy a load balancer and a virtual machine scale set across two availability zones.**
- C. In two Azure regions, deploy a Traffic Manager profile and a web app.
- D. In two Azure regions, deploy a load balancer and a virtual machine scale set.

**Answer: B**

Explanation:

(<https://docs.microsoft.com/en-us/dotnet/azure/migration/app-service#com-and-com-components>) Azure App Service does not allow the registration of COM components on the platform. If your app makes use of any COM components, these need to be rewritten in managed code and deployed with the site or application. <https://docs.microsoft.com/en-us/dotnet/azure/migration/app-service>

"Azure App Service with Windows Containers If your app cannot be migrated directly to App Service, consider App Service using Windows Containers, which enables usage of the GAC, COM components, MSIs, full access to .NET FX APIs, DirectX, and more."

#### NEW QUESTION # 254

You have an Azure subscription that contains a custom application named Application1 developed by an external company named fabric, Ltd. Developers at Fabrikam were assigned role-based access control (RBAC) permissions to the Application1 components. All users are licensed for the Microsoft 365 E5 plan.

You need to recommend a solution to verify whether the Fabrikam developers still require permissions to Application1. The solution must meet the following requirements.

- \* To the manager of the developers, send a monthly email message that lists the access permissions to Application1.
- \* If the manager does not verify access permission, automatically revoke that permission.
- \* Minimize development effort.

What should you recommend?

- **A. In Azure Active Directory (Azure AD), create an access review of Application1**
- B. In Azure Active Directory (AD) Privileged Identity Management, create a custom role assignment for the Application1 resources
- C. Create an Azure Automation runbook that runs the Get-AzureRmRoleAssignment cmdlet
- D. Create an Azure Automation runbook that runs the Get-AzureADUserAppRoleAssignment cmdlet

**Answer: A**

Explanation:

Explanation

<https://docs.microsoft.com/en-us/azure/active-directory/governance/manage-user-access-with-access-reviews> Azure Active Directory (Azure AD) access reviews enable organizations to efficiently manage group memberships, access to enterprise applications, and role assignments. User's access can be reviewed on a regular basis to make sure only the right people have continued access. Have reviews recur periodically: You can set up recurring access reviews of users at set frequencies such as weekly, monthly, quarterly or annually, and the reviewers will be notified at the start of each review. Reviewers can approve or deny access with a friendly interface and with the help of smart recommendations.

Why are access reviews important?

"Azure AD enables you to collaborate with users from inside your organization and with external users. Users can join groups, invite guests, connect to cloud apps, and work remotely from their work or personal devices.

The convenience of using self-service has led to a need for better access management capabilities."

#### NEW QUESTION # 255

Your company has the divisions shown in the following table.

You plan to deploy a custom application to each subscription. The application will contain the following:

- \* A resource group
- \* An Azure web app
- \* Custom role assignments
- \* An Azure Cosmos DB account

You need to use Azure Blueprints to deploy the application to each subscription.

What is the minimum number of objects required to deploy the application? To answer, select the appropriate options in the answer

area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation

Box 1: 2

One management group for East, and one for West.

When creating a blueprint definition, you'll define where the blueprint is saved. Blueprints can be saved to a management group or subscription that you have Contributor access to. If the location is a management group, the blueprint is available to assign to any child subscription of that management group.

Box 2: 2

Box 3: 4

One assignment for each subscription.

"Assigning a blueprint definition to a management group means the assignment object exists at the management group. The deployment of artifacts still targets a subscription. To perform a management group assignment, the Create Or Update REST API must be used and the request body must include a value for properties.scope to define the target subscription."

<https://docs.microsoft.com/en-us/azure/governance/blueprints/overview#blueprint-assignment>

**NEW QUESTION # 256**

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company plans to deploy various Azure App Service instances that will use Azure SQL databases. The App Service instances will be deployed at the same time as the Azure SQL databases.

The company has a regulatory requirement to deploy the App Service instances only to specific Azure regions. The resources for the App Service instances must reside in the same region.

You need to recommend a solution to meet the regulatory requirement.

Solution: You recommend using an Azure policy initiative to enforce the location.

Does this meet the goal?

- A. Yes
- B. No

**Answer: A**

Explanation:

Azure Resource Policy Definitions can be used which can be applied to a specific Resource Group with the App Service instances. In Azure Policy, we offer several built-in policies that are available by default. For example:

\* Allowed Locations (Deny): Restricts the available locations for new resources. Its effect is used to enforce your geo-compliance requirements.

Reference:

<https://docs.microsoft.com/en-us/azure/governance/policy/overview>

**NEW QUESTION # 257**

You have an on-premises file server that stores 2 TB of data files.

You plan to move the data files to Azure Blob storage in the Central Europe region.

You need to recommend a storage account type to store the data files and a replication solution for the storage account. The solution must meet the following requirements:

Be available if a single Azure datacenter fails.

Support storage tiers.

Minimize cost.

What should you recommend? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:
