The field of information technology has seen multiple advancements lately. Reputed companies around the globe have set the Certified Manager of Quality/Organizational Excellence Exam CMQ-OE certification as criteria for multiple well-paid job roles. Only CMQ-OE certified will easily get high-paying posts in popular companies. Additionally, a ASQ CMQ-OE Certification holder can climb the career ladder and get promotions within the current organization.

## CMQ-OE Qualification Details

The ASQ CMQ-OE is an executive-level certification that is used to validate an individual's commitment to quality in the workplace. A certified professional is considered a valuable asset in most companies because of the benefits and potential that return to the company. What's more, a certified individual leads teams successfully to develop stakeholder relations, supports, and monitors decision-making & strategic planning activities and develops measurement systems to monitor the performance of the organization. After certification, the individual should be capable of handling projects and human resources, motivating as well as encouraging staff members, identifying and mitigating risks, analyzing financial situations, and utilizing the right knowledge management strategy to achieve organizational success. All in all, such validation is suitable for managers, engineers, quality auditors, and anyone looking to create a positive impact at the workplace. Then, this certification is also ideal for executives and employees looking for a promotion.

The Certified Manager of Quality/Organizational Excellence (CMQ-OE) is a certification exam conducted by the American Society for Quality (ASQ) for individuals aiming to obtain the affiliated CMQ-OE designation that identifies and verifies specialists that initiate and lead organizational improvement processes across a variety of service and industrial settings.

### ASQ Certified Manager of Quality/Organizational Excellence Exam Sample Questions (Q151-Q156):

#### NEW QUESTION # 151

The manager for a quality improvement project at an organization receives the project charter during the initiation phase of a project. Which of the following information should the expect to find in this document?

- A. The work breakdown description (WBS) for the project
- B. The initial project requirements, constraints, and assumption
- C. The communications plan for this project
- D. The detailed risk assessment and the corresponding contingency plans for each risk

**Answer: B**

Explanation:

The project charter is a critical document that outlines the purpose, objectives, and scope of a project. During the initiation phase, the project manager receives the project charter, which serves as a formal authorization to proceed with the project. Here's what the project charter typically includes:

- \* Project Purpose and Objectives: Clearly states why the project is being undertaken and what specific outcomes or goals it aims to achieve.
- \* High-Level Requirements: Describes the initial project requirements, including what needs to be delivered, any specific features, and quality expectations.
- \* Constraints: Identifies limitations or restrictions that may impact the project, such as budget, time, resources, or regulatory compliance.
- \* Assumptions: Lists assumptions made about the project environment, stakeholders, or external factors.
- \* High-Level Stakeholder Identification: Identifies key stakeholders and their roles in the project.
- \* Project Scope: Defines the boundaries of the project-what's included and what's excluded.
- \* High-Level Risks: While not detailed risk assessments, the charter may highlight major risks or uncertainties.
- \* Project Sponsor and Authorization: Specifies who sponsors the project and authorizes its initiation.

The work breakdown structure (WBS), communications plan, and detailed risk assessments are typically developed later in the project planning phase, not within the project charter itself.

#### NEW QUESTION # 152

Which of the following is not a type of organizational structure?

- A. Strategic
- B. Matrix
- C. Process
- D. Collateral

**Answer: A**

#### NEW QUESTION # 153

A company that wants to achieve a goal of zero defects must have which of the following processes in place?

- A. Customer satisfaction surveys
- B. Internal auditors
- **C. Data-based management**
- D. 100% final inspection

**Answer: C**

#### **NEW QUESTION # 154**

A good tool to use in managing multiple-customer requirements is a

- A. Pareto chart by customer type
- B. process control chart
- **C. house of quality matrix**
- D. customer segmentation study

**Answer: C**

Explanation:

The house of quality matrix is a powerful tool for managing multiple-customer requirements. Here's how it works:

\* Customer Needs: Begin by identifying and capturing customer needs, desires, and expectations. These can be gathered through surveys, interviews, feedback, and market research.

\* Translation to Technical Requirements: The house of quality matrix translates customer needs into specific technical requirements. These requirements are often related to product features, performance, reliability, safety, and other aspects.

\* Matrix Structure:

\* The matrix has two main sections: the left side (customer requirements) and the top side (product features or characteristics).

\* Each cell in the matrix represents the relationship between a specific customer requirement and a product feature.

\* The strength of the relationship is indicated using symbols (e.g., +, ++, -) or numerical values (e.

g., 1, 2, 3).

\* Prioritization and Alignment:

\* Cross-functional teams collaborate to prioritize the technical requirements based on their impact on customer satisfaction.

\* The matrix helps align different departments (such as design, engineering, marketing, and manufacturing) around common goals.

\* Action Plans:

\* Once the matrix is complete, teams develop action plans to address each requirement.

\* These action plans guide product development, process improvement, and resource allocation.

\* Continuous Improvement:

\* The house of quality matrix is revisited throughout the product lifecycle to ensure ongoing alignment with customer needs.

\* It supports continuous improvement efforts by allowing teams to track progress and make adjustments.

In summary, the house of quality matrix provides a structured approach to managing customer requirements, fostering collaboration, and ensuring that products or services meet customer expectations2.

#### **NEW QUESTION # 155**

A transportation company offers a discount to companies that complete a customer- satisfaction survey. The purpose of offering this kind of discount is to

- A. improve customer satisfaction levels
- **B. increase the response rate**
- C. improve the quality of the responses
- D. increase market share

**Answer: B**

Explanation:

\* Offering incentives, like discounts, is a common tactic to boost survey participation rates. This is the primary aim of such a strategy.

\* While there's potential for improvement in customer satisfaction (A) and response quality (B), those are indirect benefits and not the main goal of the discount.

\* Market share (C) is not directly impacted by an increased survey response rate, although insights from the survey might later influence strategies to increase market share.
