CramPDF is a website to achieve dreams of many IT people. CramPDF provide candidates participating in the IT certification exams the information they want to help them pass the exam. Do you still worry about passing Amazon certification AIF-C01 exam? Have you thought about purchasing an Amazon certification AIF-C01 exam counseling sessions to assist you? CramPDF can provide you with this convenience. CramPDF's training materials can help you pass the certification exam. CramPDF's exercises are almost similar to real exams. With CramPDF's accurate Amazon Certification AIF-C01 Exam practice questions and answers, you can pass Amazon certification AIF-C01 exam with a high score.

## Amazon AIF-C01 Exam Syllabus Topics:

| Topic   | Details  |
|---------|--|
| Topic 1 | <ul style="list-style-type: none"> <li>Guidelines for Responsible AI: This domain highlights the ethical considerations and best practices for deploying AI solutions responsibly, including ensuring fairness and transparency. It is aimed at AI practitioners, including data scientists and compliance officers, who are involved in the development and deployment of AI systems and need to adhere to ethical standards.</li> </ul>    |
| Topic 2 | <ul style="list-style-type: none"> <li>Security, Compliance, and Governance for AI Solutions: This domain covers the security measures, compliance requirements, and governance practices essential for managing AI solutions. It targets security professionals, compliance officers, and IT managers responsible for safeguarding AI systems, ensuring regulatory compliance, and implementing effective governance frameworks.</li> </ul> |
| Topic 3 | <ul style="list-style-type: none"> <li>Applications of Foundation Models: This domain examines how foundation models, like large language models, are used in practical applications. It is designed for those who need to understand the real-world implementation of these models, including solution architects and data engineers who work with AI technologies to solve complex problems.</li> </ul>                                    |
| Topic 4 | <ul style="list-style-type: none"> <li>Fundamentals of AI and ML: This domain covers the fundamental concepts of artificial intelligence (AI) and machine learning (ML), including core algorithms and principles. It is aimed at individuals new to AI and ML, such as entry-level data scientists and IT professionals.</li> </ul>   |
| Topic 5 | <ul style="list-style-type: none"> <li>Fundamentals of Generative AI: This domain explores the basics of generative AI, focusing on techniques for creating new content from learned patterns, including text and image generation. It targets professionals interested in understanding generative models, such as developers and researchers in AI.</li> </ul>   |

## Amazon AIF-C01 Certification Exam Infor | Exam AIF-C01 Training

These latest AWS Certified AI Practitioner (AIF-C01) Questions were made by CramPDF professionals after working day and

night so that users can prepare for the Amazon AIF-C01 exam successfully. CramPDF even guarantees you that you can pass the Amazon AIF-C01 Certification test on the first try with your untiring efforts.

## Amazon AWS Certified AI Practitioner Sample Questions (Q309-Q314):

### NEW QUESTION # 309

A company has built a chatbot that can respond to natural language questions with images. The company wants to ensure that the chatbot does not return inappropriate or unwanted images.

Which solution will meet these requirements?

- A. Automate user feedback integration.
- B. Perform model validation.
- **C. Implement moderation APIs.**
- D. Retrain the model with a general public dataset.

**Answer: C**

Explanation:

Moderation APIs, such as Amazon Rekognition's Content Moderation API, can help filter and block inappropriate or unwanted images from being returned by a chatbot. These APIs are specifically designed to detect and manage undesirable content in images.

Option A (Correct): "Implement moderation APIs": This is the correct answer because moderation APIs are designed to identify and filter inappropriate content, ensuring the chatbot does not return unwanted images.

Option B: "Retrain the model with a general public dataset" is incorrect because retraining does not directly prevent inappropriate content from being returned.

Option C: "Perform model validation" is incorrect as it ensures model correctness, not content moderation.

Option D: "Automate user feedback integration" is incorrect because user feedback does not prevent inappropriate images in real-time.

AWS AI Practitioner Reference:

AWS Content Moderation Services: AWS provides moderation APIs for filtering unwanted content from applications.

### NEW QUESTION # 310

A company wants to display the total sales for its top-selling products across various retail locations in the past 12 months.

Which AWS solution should the company use to automate the generation of graphs?

- A. Amazon Q in AWS Chatbot
- B. Amazon Q Developer
- **C. Amazon Q in Amazon QuickSight**
- D. Amazon Q in Amazon EC2

**Answer: C**

Explanation:

Amazon QuickSight is a fully managed business intelligence (BI) service that allows users to create and publish interactive dashboards that include visualizations like graphs, charts, and tables. "Amazon Q" is the natural language query feature within Amazon QuickSight. It enables users to ask questions about their data in natural language and receive visual responses such as graphs.

\* Option C (Correct): "Amazon Q in Amazon QuickSight": This is the correct answer because Amazon QuickSight Q is specifically designed to allow users to explore their data through natural language queries, and it can automatically generate graphs to display sales data and other metrics. This makes it an ideal choice for the company to automate the generation of graphs showing total sales for its top-selling products across various retail locations.

\* Option A, B, and D: These options are incorrect:

\* A. Amazon Q in Amazon EC2: Amazon EC2 is a compute service that provides virtual servers, but it is not directly related to generating graphs or providing natural language querying features.

\* B. Amazon Q Developer: This is not an existing AWS service or feature.

\* D. Amazon Q in AWS Chatbot: AWS Chatbot is a service that integrates with Amazon Chime and Slack for monitoring and managing AWS resources, but it is not used for generating graphs based on sales data.

AWS AI Practitioner References:

\* Amazon QuickSight Q is designed to provide insights from data by using natural language queries, making it a powerful tool for generating automated graphs and visualizations directly from queried data.

\* Business Intelligence (BI) on AWS: AWS services such as Amazon QuickSight provide business intelligence capabilities, including

automated reporting and visualization features, which are ideal for companies seeking to visualize data like sales trends over time.

### NEW QUESTION # 311

A company has built a solution by using generative AI. The solution uses large language models (LLMs) to translate training manuals from English into other languages. The company wants to evaluate the accuracy of the solution by examining the text generated for the manuals.

Which model evaluation strategy meets these requirements?

- A. Recall-Oriented Understudy for Gisting Evaluation (ROUGE)
- **B. Bilingual Evaluation Understudy (BLEU)**
- C. F1 score
- D. Root mean squared error (RMSE)

**Answer: B**

Explanation:

BLEU (Bilingual Evaluation Understudy) is a metric used to evaluate the accuracy of machine-generated translations by comparing them against reference translations. It is commonly used for translation tasks to measure how close the generated output is to professional human translations.

\* Option A (Correct): "Bilingual Evaluation Understudy (BLEU)": This is the correct answer because BLEU is specifically designed to evaluate the quality of translations, making it suitable for the company's use case.

\* Option B: "Root mean squared error (RMSE)" is incorrect because RMSE is used for regression tasks to measure prediction errors, not translation quality.

\* Option C: "Recall-Oriented Understudy for Gisting Evaluation (ROUGE)" is incorrect as it is used to evaluate text summarization, not translation.

\* Option D: "F1 score" is incorrect because it is typically used for classification tasks, not for evaluating translation accuracy.

AWS AI Practitioner References:

\* Model Evaluation Metrics on AWS: AWS supports various metrics like BLEU for specific use cases, such as evaluating machine translation models.

### NEW QUESTION # 312

A company wants to keep its foundation model (FM) relevant by using the most recent data. The company wants to implement a model training strategy that includes regular updates to the FM.

Which solution meets these requirements?

- A. Static training
- B. Batch learning
- **C. Continuous pre-training**
- D. Latent training

**Answer: C**

Explanation:

To keep a foundation model (FM) relevant with the most recent data, the company needs a training strategy that supports regular updates. Continuous pre-training involves periodically updating a pre-trained model with new data to improve its performance and relevance over time, making it the best fit for this requirement.

Exact Extract from AWS AI Documents:

From the AWS AI Practitioner Learning Path:

"Continuous pre-training is a strategy where a pre-trained model is periodically updated with new data to keep it relevant and improve its performance. This approach is commonly used for foundation models to ensure they adapt to new trends and information." (Source: AWS AI Practitioner Learning Path, Module on Model Training Strategies) Detailed Option A: Batch learning Batch learning involves training a model on a fixed dataset in batches, but it does not inherently support regular updates with new data to keep the model relevant over time.

Option B: Continuous pre-training This is the correct answer. Continuous pre-training updates the FM with recent data, ensuring it stays relevant by adapting to new trends and information.

Option C: Static training Static training implies training a model once on a fixed dataset without updates, which does not meet the requirement for regular updates.

Option D: Latent training Latent training is not a standard term in AWS or ML contexts. It may refer to latent space in models like VAEs, but it is not a strategy for regular model updates.

### NEW QUESTION # 313

A company wants to use AI to protect its application from threats. The AI solution needs to check if an IP address is from a suspicious source.

- A. Create a natural language processing (NLP) named entity recognition system.
- B. Build a speech recognition system.
- C. Create a fraud forecasting system.
- **D. Develop an anomaly detection system.**

**Answer: D**

Explanation:

The correct answer is C - Develop an anomaly detection system. According to AWS documentation, anomaly detection models are specifically used to identify unusual or suspicious patterns in data, such as unexpected IP access behavior, unusual network traffic, login anomalies, or deviations from normal usage patterns. Amazon SageMaker and Amazon Lookout for Metrics both support anomaly detection capabilities that detect deviations from learned baselines. AWS highlights that anomaly detection is widely used in cybersecurity, fraud detection, intrusion monitoring, and identifying suspicious IP addresses. Speech recognition (A) and NLP named entity recognition (B) do not classify threat behavior. Fraud forecasting (D) focuses on long-term prediction patterns, not real-time anomaly detection. Since identifying malicious IP sources requires spotting activity outside the normal distribution, anomaly detection is the most accurate and AWS-aligned solution.
