BCS ISTQB Certified Tester Advanced Level - Test Management v3.0 Sample Questions (Q16-Q21):

NEW QUESTION # 16

You have been contracted to manage the user acceptance testing of a new reservation system for a travel agency. The reservation system is being developed by a third party. Detailed specifications are available, and an estimate of the total development effort exists. The system will be delivered in four agreed increments.

Which of the following estimation techniques would be most appropriate to use in this context?

- A. Wide-band Delphi
- B. Planning poker
- C. Extrapolation
- D. Estimation based on ratios

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of ISTQB Certified Tester Advanced Level - Test Manager v3.0 syllabus:

The syllabus describes ratio-based estimation (e.g., estimating test effort as a proportion of known or estimated development effort) as appropriate when reliable development-effort data or estimates and clear scope are available. Here, detailed specifications exist, overall development effort is estimated, and increments are defined-conditions well-suited to ratio-based estimation.

Extrapolation requires comparable historical test data for this context.

Wide-band Delphi is useful when data is scarce and expert consensus is needed.

Planning poker is typically used by Agile development teams to size user stories, not for contracting UAT with a third party.

NEW QUESTION # 17

You are the only tester in an Agile team. The test policy states that only defects that need to be solved outside the team are documented. You are receiving complaints from developers from other teams that they do not receive sufficient defect information to be able to efficiently and effectively solve the defects. You have used the ISO 29119 standard to identify which attributes could be added to the current defect report template.

Which two of the following options would be best to add to the current defect report template to solve the current issue?

- A. Configuration in which the defect was found
- B. How to reproduce the defect
- C. Severity of the defect
- D. The name of the tester that found the defect
- E. Test level where the defect was found

Answer: A,B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of ISTQB Certified Tester Advanced Level - Test Manager v3.0 syllabus:

In the Testing Process (defect management and reporting), the syllabus emphasizes that defect reports must contain sufficient information to allow effective reproduction and diagnosis and that they should include environment/configuration details relevant to reproducing the failure and isolating the underlying defect. Concretely, the syllabus highlights information such as steps to reproduce, observed and expected results, and test environment/configurations as essential elements to enable teams (especially external teams) to analyze and fix defects efficiently. Therefore, adding How to reproduce the defect (B) and the Configuration in which the defect was found (E) most directly addresses the complaint of insufficient information for external developers.

(ISTQB CTAL-TM v3.0 - Chapter "Testing Process": defect reporting content and quality; importance of reproducibility and environment details in defect reports.)

NEW QUESTION # 18

A company that sells an established capture-replay execution tool is adding a test management tool. Same team, same technology, incremental development (V-model per increment), known first-year features; later features driven by customer demand.

Which two of the following factors are most likely to influence the estimation technique that would be selected in this scenario?

- A. Estimation error
- B. Knowledge in modelling
- C. Time constraints
- D. Expert availability
- E. Data availability

Answer: D,E

Explanation:

According to the ISTQB Certified Tester Advanced Level - Test Manager v3.0 Syllabus (Chapter 3: Test Planning, Monitoring, and Control), the choice of test estimation technique depends on several influencing factors, including data availability, expert availability, and knowledge of historical information or models.

"The selection of a suitable estimation approach (metrics-based or expert-based) depends on factors such as the availability of relevant historical data, the availability of experts with appropriate experience, the time available to perform estimation, and the knowledge of applicable models." (ISTQB CTAL-TM v3.0 Syllabus, Chapter 3 - Test Planning, Section: Test Estimation) Analysis for this scenario:

* The organization is adding a test management tool to an existing product using the same team and technology- implying availability of previous project data from similar development work. #Data availability (B) is a significant factor, enabling the use of metrics-based estimation.

* The same experienced team is working on the project, meaning domain and technical experts are available. #Expert availability (C) also influences estimation and may support an expert-based estimation approach for new, customer-driven increments.

Therefore, the combination of data availability (B) and expert availability (C) most strongly influences the estimation technique to be applied in this scenario.

Why the Other Options Are Incorrect:

* A. Estimation error- This is a result of estimation, not a factor influencing the choice of estimation technique.

* D. Knowledge in modelling- While useful, modelling is not central to this specific context because data and experts are readily available.

* E. Time constraints- Not highlighted as a limiting factor in this scenario; estimation can be planned adequately given the context.

* Lists influencing factors for selecting estimation techniques: availability of historical data, expert knowledge, applicable models, and time available for estimation.

NEW QUESTION # 19

You are a test manager managing a test team and working at a government agency. The test team is responsible for performing the system test. Senior management has been provided with the following test objective for a new project:

"The system should be of high quality."

Using the SMART goal methodology, which of the following statements would be appropriate as a revision to the defined test objective by management?

- A. All defined requirements shall be implemented and function without problems
- B. At least three weeks of system testing shall be performed and no major defects will be outstanding before going live
- C. The number of user issues reported in the first 3 months after going live shall be less than an average of 1 per week
- D. During component testing a statement coverage of 90% shall be achieved

Answer: C

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of ISTQB Certified Tester Advanced Level - Test Manager v3.0 syllabus:

The syllabus requires that test objectives be SMART: Specific, Measurable, Achievable, Relevant, and Time-bound. Option C is specific ("user issues"), measurable ("< 1 per week"), achievable (depending on context), relevant to system quality in production, and time-bound ("first 3 months after going live").

A is not measurable ("...without problems" is vague).

B is partially SMART but uses ambiguous terms ("major defects") and focuses on elapsed time rather than quality outcomes.

References: ISTQB CTAL-TM v3.0 Syllabus-Chapter 3 (Test Planning: defining measurable test objectives and SMART criteria; aligning objectives to levels and stakeholders).

NEW QUESTION # 20

Assume that you have calculated the following costs of quality:

Average cost of detection: €350

Average cost of internal failure: €250

Average cost of external failure: €4,500

The average costs of detection and internal failure are calculated using the number of defects found prior to release, while the

average cost of external failure is calculated using the number of defects found after release. What is the saving in cost of quality for each defect found in testing?

- A. €4,600
- **B. €3,900**
- C. €5,100
- D. €4,400

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of ISTQB Certified Tester Advanced Level - Test Manager v3.0 syllabus:

The syllabus explains the cost of quality (CoQ) perspective for testing and distinguishes between pre-release costs (e.g., detection/appraisal and internal failure costs) and post-release costs (external failure costs). When a defect is found during testing, you incur detection and internal failure costs; if it escapes to production, you incur the (typically much higher) external failure cost.

The saving per defect found in testing is calculated as:

External failure # (Detection + Internal failure) = €4,500 # (€350 + €250) = €4,500 # €600 = €3,900.

This aligns with the syllabus guidance to quantify testing's economic value by comparing avoided external failure costs with the costs of detecting and fixing defects before release (CoQ view).
