So you rest assured that with all Salesforce-Certified-Administrator exam practice test questions you will get everything that you need to learn, prepare and pass the valuable Salesforce-Certified-Administrator certification with good scores.

## Salesforce Certified Administrator Sample Questions (Q230-Q235):

### NEW QUESTION # 230

An administrator is planning to use Data Loader to mass import new records to a custom object from a new API. What will the administrator need to do to use the Data Loader?

- A. Add a permission set that allows them to import data.
- B. Append their security token at the end of their password to login.
- C. Reset their password and their security token.

- D. Use the Data Import Tool to mass import custom object records.

**Answer: B**

Explanation:

Explanation

To use Data Loader to mass import new records to a custom object from a new API, the administrator will need to append their security token at the end of their password to login. The security token is an alphanumeric code that is required for API access when logging in from an IP address that is not trusted by Salesforce. The security token can be obtained from the user's personal settings or by resetting it via email. Adding a permission set, resetting the password and the security token, or using the Data Import Tool are not necessary for using Data Loader. References:

### NEW QUESTION # 231

The Call centre manager in Ursa Major Solar wants to provide agents with a case dashboard that can be drilled down by case origin, status and owner.

What should an Administrator add to the dashboard to fulfil the request?

- A. Dashboard Filter
- B. Dashboard component
- C. Bucket column
- D. Combination Chart

**Answer: A**

### NEW QUESTION # 232

The administrator for Cloud Kicks needs to give access to a new custom object with custom fields to more than one user.

Which two options should an administrator use to meet this requirement?

Choose 2 answers

- A. Assign permission set group to Users
- B. Add to manual sharing list
- C. Create a Permission Set
- D. Edit organization-wide defaults

**Answer: A,B**

### NEW QUESTION # 233

An analytics user at Cloud Kicks needs Read, Create, and Edit access for objects and Should be restricted from deleting any records.

What should the administrator do to meet this requirement?

- A. Create and assign a permission set that includes Read, Create, and Edit access
- B. Give the user View all access and assign them to the highest role in the role hierarchy.
- C. Create and assign a custom profile with Delete access removed for each object.
- D. Assign the standard System Administrator profile to the analytical user.

**Answer: C**

### NEW QUESTION # 234

Ursa Major Solar has a path on Case. The Company wants to require its users to follow the status values as they are on the path. Agents should be prohibited from preventing the case back to a previous status.

Which Feature Should an administrator use to fulfill this request?

- A. Validation rules.
- B. Dependent Picklists.

- C. Global Value Picklists
- D. Predefined field Values.

#### Answer: A

Explanation:

Explanation

Validation rules are a way to enforce data quality and business logic by preventing users from saving records that do not meet certain criteria. They can be used to require users to follow the status values as they are on the path and prevent them from reverting the case back to a previous status by using formulas that compare the old and new values of the status field. Global value picklists are a way to create and maintain picklist values that can be shared across multiple fields, but they do not enforce any logic or order on the values. Predefined field values are a way to set default values for fields on path settings, but they do not prevent users from changing them later. Dependent picklists are a way to filter the values of one picklist based on the value of another picklist, but they do not prevent users from going back to a previous value. References:
