VMware Avi Load Balancer 30.x Administrator Sample Questions (Q203-Q208):

NEW QUESTION # 203

Which feature provides global load balancing across multiple data centers?

- A. DNS Service
- B. VRRP
- C. NAT Gateway
- **D. GSLB**

Answer: D

NEW QUESTION # 204

An application requires client requests to be distributed based on a value in the HTTP URI. For instance, all requests for /api/v1/us-east/... should go to pool-us-east and all requests for /api/v1/us-west/... should go to pool-us-west. Which load balancing algorithm, when combined with a specific string from the URI, can achieve this deterministic routing?

- **A. Consistent Hash**
- B. Least Connections
- C. Fastest Response
- D. Round Robin

Answer: A

NEW QUESTION # 205

A financial services company is planning a major upgrade of their Avi Load Balancer environment. The primary requirements are to ensure zero downtime for critical applications and to have a robust, automated way to handle both sudden traffic spikes (scale-out) and platform failures (high availability). They also want to implement a WAF policy to protect against common web vulnerabilities. Which combination of configurations must be implemented to meet all these requirements? (Select all that apply.)

- A. Ensure the vCenter cloud is configured in 'No Orchestrator' mode to prevent accidental changes.
- **B. Configure each Service Engine Group in N+M mode and set the ha_mode for Virtual Services to Active/Active.**

- C. Create a GSLB service to distribute traffic across multiple Avi deployments in different regions.
- **D. Attach a WAF Policy to the Application Profile used by the critical Virtual Services.**
- **E. For each critical Virtual Service, set 'Max Number of Service Engines' to a value greater than 1.**
- F. Deploy all Service Engines in a single, large Service Engine Group with the placement mode set to 'Distributed'.

Answer: B,D,E

NEW QUESTION # 206

A Security Administrator is analyzing the logs for a Virtual Service before and after enabling a WAF policy. Before WAF was enabled, a typical log for a successful transaction appeared as a "Non-Significant Log". How does the nature of logging change for that same transaction after the WAF policy is enabled and set to 'Enforcement' mode?

- A. Successful transaction logs will no longer be generated to save space.
- **B. The transaction log will now include a WAF section detailing the rules evaluated, even if no threat was detected.**
- C. The log format remains identical, but a separate "WAF Event" is created in the Events tab.
- D. All logs, including successful ones, are now classified as "Significant Logs".

Answer: B

NEW QUESTION # 207

An Avi Administrator is reviewing a set of logs from a Virtual Service configured to terminate SSL/TLS connections. The goal is to verify that clients are connecting using a strong and modern TLS protocol. Which specific fields within the detailed log entries would provide this information?

(Select all that apply.)

- A. The SSL Certificate information
- **B. The SSL Cipher**
- C. The Server IP
- D. The Client IP
- **E. The SSL Protocol**
- F. The SSL Session ID

Answer: B,E

NEW QUESTION # 208

.....
