C-CPI-2506 Latest Exam Duration | C-CPI-2506 Questions

If you want to through the SAP C-CPI-2506 certification exam to make a stronger position in today's competitive IT industry, then you need the strong expertise knowledge and the accumulated efforts. And pass the SAP C-CPI-2506 exam is not easy. Perhaps through SAP C-CPI-2506 exam you can promote yourself to the IT industry. But it is not necessary to spend a lot of time and effort to learn the expertise. You can choose DumpTorrent's SAP C-CPI-2506 Exam Training materials. This is training product that specifically made for IT exam. With it you can pass the difficult SAP C-CPI-2506 exam effortlessly.

SAP Certified Associate - Integration Developer Sample Questions (Q33-Q38):

NEW QUESTION # 33

How do you configure a SOAP adapter for asynchronous processing?

- A. Message Exchange Pattern: Request-Reply Process Settings WS Standard
- B. Message Exchange Pattern: Request-Reply Process Settings Robust
- **C. Message Exchange Pattern: One-Way Process Settings: WS Standard**
- D. Message Exchange Pattern: One-Way Process Settings: Robust

Answer: C

Explanation:

To configure a SOAP adapter for asynchronous processing, you must set the message exchange pattern to one-way and the process settings to WS standard. The message exchange pattern defines how the sender and receiver communicate with each other using SOAP messages. The one-way pattern means that the sender sends a message to the receiver without expecting a response. The process settings define how the SOAP adapter handles errors and acknowledgements during message processing. The WS standard setting means that the SOAP adapter uses WS-ReliableMessaging protocol to ensure reliable delivery of messages and WS-Addressing protocol to identify the endpoints and actions of messages. Reference: Configure the SOAP (SOAP 1.x) Sender Adapter | SAP Help Portal, Configure the SOAP (SOAP 1.x) Receiver Adapter | SAP Help Portal

NEW QUESTION # 34

What do you use in an integration flow to handle unexpected errors?

- A. Exception handler integration flow elements
- **B. Exception-handling subprocesses**
- C. Try-catch subprocesses
- D. Status code checks

Answer: B

Explanation:

You use exception-handling subprocesses in an integration flow to handle unexpected errors. Exception-handling subprocesses are special types of subprocesses that are triggered when an error occurs in the main process or another subprocess. You can define custom actions and logic to handle different types of errors using exception-handling subprocesses. Reference: Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 35

Which of the following are markup languages that you can use to describe APIs? Note: There are 2 correct answers to this question.

- A. CXML
- B. HTML
- C. OpenAPI
- D. RAML

Answer: C,D

Explanation:

RAML and OpenAPI are markup languages that you can use to describe APIs. RAML stands for RESTful API Modeling Language and is based on YAML. OpenAPI is a specification for describing RESTful APIs and is based on JSON or YAML. Both languages allow you to define the structure, parameters, responses, and documentation of your APIs. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

NEW QUESTION # 36

In your integration flow process, the request reply returns a message with namespaces. What can you do to delete namespaces from this message? Note: There are 2 correct answers to this question.

- A. Set up the namespace mapping in the Runtime Configuration.
- B. Use a Content Modifier
- C. Set up the request reply to delete the namespaces
- D. Use an XSLT mapping

Answer: B,D

Explanation:

A Content Modifier is a step in an integration flow that allows you to modify the message header or body using expressions or constants. You can use a Content Modifier to delete namespaces from a message by using expressions that remove the namespace declarations or prefixes from the XML elements or attributes. For example, you can use the expression `replace($body,'xmlns:ns[0-9]+='\[`
