## Mule-Arch-202 Valid Test Cram - Examcollection Mule-Arch-202 Questions Answers

If you want to take Salesforce Mule-Arch-202 exam, TestkingPDF Salesforce Mule-Arch-202 exam dumps are your best tools. The dumps can help you pass Mule-Arch-202 test easily. And the dumps are very highly regarded. With our test questions and test answers, you don't need to worry about Mule-Arch-202 Certification. Because our dumps can solve all difficult problems you encounter in the process of preparing for the exam. Before you make a decision, you can download our free demo. For this, you will know whether our questions and answers fit to you or not.

## Salesforce Certified MuleSoft Platform Integration Architect Sample Questions (Q165-Q170):

### NEW QUESTION # 165

An organization is sizing an Anypoint Virtual Private Cloud (VPC) to extend its internal network to CloudHub 1.0. For this sizing calculation, the organization assumes three production-type environments will each support up to 150 Mule application deployments. Each Mule application deployment is expected to be configured with two CloudHub 1.0 workers and will use the zero-downtime feature in CloudHub 1.0. This is expected to result in, at most, several Mule application deployments per hour.

What is the minimum number of IP addresses that should be configured for this VPC resulting in the smallest usable range of private IP addresses to support the deployment and zero-downtime of these 150 Mule applications (not accounting for any future Mule applications)?

- A. 10.0.0.0/24 (256 IPs)
- B. 10.0.0.0/23 (512 IPs)
- C. 10.0.0.0/21 (2048 IPs)
- D. 10.0.0.0/22 (1024 IPs)

**Answer: C**

### NEW QUESTION # 166

An organization is trying to invoke REST APIs as part of its integration with external systems, which requires OAuth 2.0 tokens for authorization.

How should authorization tokens be acquired in a Mule application?

- A. Implement Scheduler-based flow for retrieving/saving OAuth 2.0 tokens in Object Store
- B. Write custom Java code for handling authorization tokens
- C. Configure OAuth 2.0 in Client Management in Anypoint Platform
- D. Use HTTP Connector's Authentication Feature

**Answer: D**

### NEW QUESTION # 167

An Integration Architect has designed a mobile application for Salesforce users to get data while on the road using a custom UI. The application is secured with OAuth and is currently functioning well. There is a new requirement where the mobile application needs to obtain the GPS coordinates and store it on a custom geolocation field.

The geolocation field is secured with Field Level Security, so users can view the value without changing it.

What should be done to meet the requirement?

- A. The mobile device makes a SOAP API inbound call.
- B. The mobile device makes a REST API inbound call.
- C. The mobile device makes a REST Apex inbound call.
- D. The mobile device receives a REST Apex callout call.

**Answer: B**

### NEW QUESTION # 168

A software company is creating a Mule application that will be deployed to CloudHub. The Mule application has a property named dbPassword that stores a database user's password. The organization's security standards indicate that the dbPassword property must be hidden from every Anypoint Platform user after the value is set in the Runtime Manager Properties tab.

Which configuration in the Mule application helps hide the dbPassword property value in Runtime Manager?

- A. Use secure::dbPassword as the property placeholder name and store the cleartext (unencrypted) value in a secure properties placeholder file
- B. Add the dbPassword property to the secureProperties section of the mule-artifact.json file
- C. Store the encrypted dbPassword value in a secure properties placeholder file
- D. Add the dbPassword property to the secureProperties section of the pom.xml file

**Answer: B**

### NEW QUESTION # 169

An automation engineer must write scripts to automate the steps of the API lifecycle, including steps to create, publish, deploy, and manage APIs and their implementations in Anypoint Platform.

Which Anypoint Platform feature can be most easily used to automate the execution of all these actions in scripts without needing to directly invoke the Anypoint Platform REST APIs?

- A. GitHub actions
- **B. Anypoint CLI**
- C. Custom-developed Postman scripts
- D. Mule Maven plugin

**Answer: B**

### NEW QUESTION # 170
