## JN0-336 Exam Demo & Accurate JN0-336 Prep Material

Thousands of Security, Specialist (JNCIS-SEC) exam aspirants have already passed their Juniper JN0-336 certification exam and they all got help from top-notch and easy-to-use Juniper JN0-336 Exam Questions. You can also use the PrepAwayETE JN0-336 exam questions and earn the badge of Juniper JN0-336 certification easily.

### Juniper Security, Specialist (JNCIS-SEC) Sample Questions (Q44-Q49):

#### NEW QUESTION # 44

Which three statements about SRX Series device chassis clusters are true? (Choose three.)

- A. Chassis cluster control links must be configured using RFC 1918 IP addresses.
- B. A control link failure causes the secondary cluster node to be disabled.

- C. Heartbeat messages verify that the chassis cluster control link is working.
- D. Recovery from a control link failure requires that the secondary member device be rebooted.
- E. Chassis cluster member devices synchronize configuration using the control link.

**Answer: B,C,E**

Explanation:

B: Chassis cluster member devices synchronize configuration using the control link: This statement is correct because the control link is used for configuration synchronization among other functions.

C: A control link failure causes the secondary cluster node to be disabled: This statement is correct because a control link failure causes the secondary node to become ineligible for primary role and remain in secondary role until the control link is restored.

E: Heartbeat messages verify that the chassis cluster control link is working: This statement is correct because heartbeat messages are sent periodically over the control link to monitor its status.

#### NEW QUESTION # 45

Regarding static attack object groups, which two statements are true? (Choose two.)

- A. Group membership automatically changes when Juniper updates the IPS signature database.
- B. You must manually add matching attack objects to a custom group.
- C. Matching attack objects are automatically added to a custom group.
- D. Group membership does not automatically change when Juniper updates the IPS signature database.

**Answer: B,D**

#### NEW QUESTION # 46

What are two types of system logs that Junos generates? (Choose two.)

- A. system core dump files
- B. SQL log files
- C. data plane logs
- D. control plane logs

**Answer: C,D**

Explanation:

The two types of system logs that Junos generates are control plane logs and data plane logs. Control plane logs are generated by the Junos operating system and contain system-level events such as system startup and shutdown, configuration changes, and system alarms. Data plane logs are generated by the network protocol processes and contain messages about the status of the network and its components, such as routing, firewall, NAT, and IPS. SQL log files and system core dump files are not types of system logs generated by Junos.

#### NEW QUESTION # 47

Your company is using the Juniper ATP Cloud free model. The current inspection profile is set at 10 MB. You are asked to configure ATP Cloud so that executable files up to 30 MB can be scanned while at the same time minimizing the change in scan time for other file types.

Which configuration should you use in this scenario?

- A. Use the ATP Cloud UI to update a custom profile and increase the scan limit for executable files to 30 MB.
- B. Use the CLI to change the default profile to increase the scan limit for all files to 30 MB.
- C. Use the CLI to create a custom profile and increase the scan limit.
- D. Use the ATP Cloud UI to change the default profile to increase the scan limit for all files to 30 MB.

**Answer: A**

Explanation:

In this scenario, you should use the ATP Cloud UI to create a custom profile and update the scan limit for executable files to 30 MB. This will ensure that executable files up to 30 MB can be scanned, while at the same time minimizing the change in scan time for other file types. To do this, log in to the ATP Cloud UI and go to the Profiles tab. Click the Create button to create a new profile,

and then adjust the scan limits for executable files to 30 MB. Once you have saved the custom profile, you can apply it to the desired systems and the new scan limit will be in effect.

#### NEW QUESTION # 48

Click the Exhibit button.

There is a problem with this website's security certificate.

The security certificate presented by this website was not issued by a trusted certificate authority.

Security certificate problems may indicate an attempt to fool you or intercept any data you send to the server.

You have implemented SSL client protection proxy. Employees are receiving the error shown in the exhibit. How do you solve this problem?

- A. Reboot the SRX Series device.
- B. Install a new SRX Series device to act as the client proxy
- **C. Import the existing certificate to each client device.**
- D. Load a known good, but expired. CA certificate onto the SRX Series device.

**Answer: C**

Explanation:

SSL client protection proxy is a feature that allows you to decrypt and inspect the SSL traffic from clients to servers. To do this, you need to install a certificate authority (CA) certificate on the SRX Series device and import the same certificate to each client device. This way, the SRX Series device can act as a proxy between the client and the server and perform security checks on the decrypted traffic. If the client device does not have the certificate installed, it will receive an error message like the one shown in the exhibit.
