As we all know, an international SC-200 certificate will speak louder to prove your skills.

Microsoft Security Operations Analyst Sample Questions (Q209-Q214):

NEW QUESTION # 209

You need to recommend remediation actions for the Azure Defender alerts for Fabrikam.

What should you recommend for each threat? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer Area

Internal threat:

- Add resource locks to the key vault.
- Modify the access policy settings for the key vault.
- Modify the role-based access control (RBAC) settings for the key vault.

External threat:

- Implement Azure Firewall.
- Modify the Key Vault firewall settings.
- Modify the network security groups (NSGs).

Answer:

Explanation:

Answer Area

Internal threat:

- Add resource locks to the key vault.
- Modify the access policy settings for the key vault.
- Modify the role-based access control (RBAC) settings for the key vault.

External threat:

- Implement Azure Firewall.
- Modify the Key Vault firewall settings.
- Modify the network security groups (NSGs).

NEW QUESTION # 210

You have a Microsoft 365 subscription that uses Microsoft Defender XDR, Microsoft Purview, and Exchange Online.

You have a partner company named Contoso, Ltd.

You need to review all the emails that contain PDF attachments and were received from Contoso during the past month. The solution must minimize administrative effort.

What should you use?

- A. Content search
- B. Content explorer
- C. Advanced Hunting
- D. Activity explorer

Answer: A

Explanation:

To review all emails received from a specific partner domain that contain PDF attachments over the past month, Microsoft recommends using Content search in Microsoft Purview eDiscovery (Standard). The documentation explains that Content search lets you search Exchange mailboxes using query conditions such as sender/domain, date range, and attachment/filename or file type filters, and you can preview results without complex setup. Microsoft describes using KQL in Content search: for example,

fromcontoso.com AND hasattachment:true AND (filetype:pdf OR attachment:*.pdf) with a received date filter for the last 30 days. This tool is purpose-built for broad mailbox searches with minimal administrative effort—you don't need to create advanced hunting queries or configure DLP analytics. Advanced hunting focuses on telemetry in Defender and requires crafting KQL across multiple tables; Content explorer and Activity explorer are for DLP content/activity insights, not ad-hoc email discovery at scale. Therefore, Content search is the most direct and efficient solution.

NEW QUESTION # 211

You need to create a query for a workbook. The query must meet the following requirements:

List all incidents by incident number.

Only include the most recent log for each incident.

How should you complete the query? To answer, select the appropriate options in the answer area.

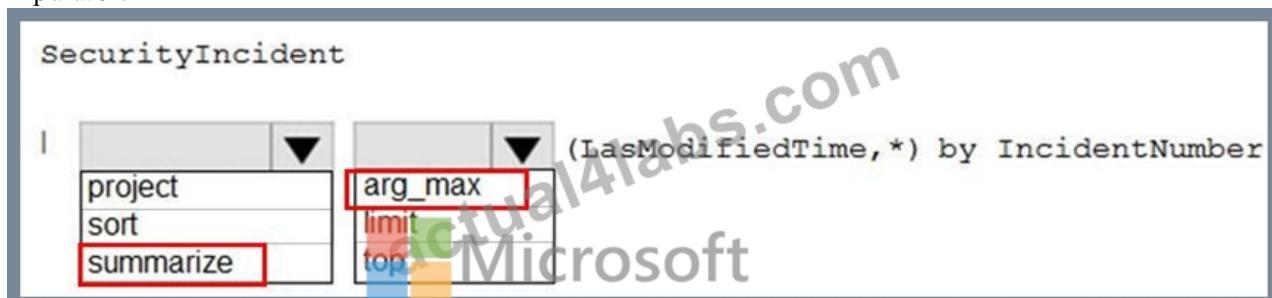

NOTE: Each correct selection is worth one point.

```
SecurityIncident
| project [incidentnumber], [lastmodifiedtime]
| arg_max ([lastmodifiedtime], *) by [incidentnumber]
| limit 1
| summarize
```

Answer:

Explanation:

```
SecurityIncident
| project [incidentnumber], [lastmodifiedtime]
| arg_max ([lastmodifiedtime], *) by [incidentnumber]
| limit 1
| summarize
```
