Test 300-535 Collection & Valid Test 300-535 Format

Sometimes hesitating will lead to missing a lot of opportunities. If you think a lot of our 300-535 exam dumps PDF, you should not hesitate again. Too much hesitating will just waste a lot of time. Our 300-535 exam dumps PDF can help you prepare casually and pass exam easily. If you make the best use of your time and obtain a useful certification you may get a senior position ahead of others. Chance favors the prepared mind. TestValid provide the best 300-535 Exam Dumps Pdf materials in this field which is helpful for you.

Cisco Automating and Programming Cisco Collaboration Solutions Sample Questions (Q59-Q64):

NEW QUESTION # 59
An engineer needs to update the configuration on a Cisco 3850 switch. To execute this change, RESTCONF must be used. Which two operations must the engineer use that are covered by NETCONF <edit-config>? (Choose two.)

- A. GIVE
- B. HEAD
- C. PUT
- D. POST
- E. GET

Answer: C,D

Explanation:
POST is used in RESTCONF to create new resources, similar to how <edit-config> in NETCONF creates or updates configuration data.
PUT is used in RESTCONF to update or replace existing resources, which also aligns with NETCONF <edit-config> operations for updating configuration.

NEW QUESTION # 60
Refer to the exhibit. An automation engineer has created a RESTCONF POST to configure network devices. Which two tasks are accomplished when the code is executed? (Choose two.)

- A. If the specified configuration is not on the device, the POST request creates it.
- B. If the specified configuration is already in the running configuration, the command is not replaced by this request.
- C. If the specified configuration is already executed in the running configuration, the command is merged with this request.
- D. If the specified configuration is already in the running configuration, the command is replaced by this request.
- E. If the specified configuration is already in the running configuration, the command updates this request.

Answer: A,B

Explanation:
If the data resource already exists, then the POST request MUST fail and a "409 Conflict" status- line MUST be returned. The error-tag value "resource-denied" is used in this case.
https://tools.ietf.org/html/rfc8040#section-4.4

NEW QUESTION # 61
Which data format should be used to serialize structured data in the most compact way?

- A. JSON
- B. protobufs
- C. YAML
- D. XML

Answer: C

NEW QUESTION # 62
What tool is used to perform a "what if" failure analysis in a service provider network that is running Segment Routing?

- A. Cisco WAN Automation Engine
- B. Cisco Network Services Orchestrator
- C. Cisco Segment Routing Path Computation Element
- D. Cisco Evolved Programmable Network Manager

Answer: A

NEW QUESTION # 63
Refer to the exhibit. Which YANG model was used as a basis to create the XML instance in the exhibit?

```
1  <bgp xmlns="http://router.example.com">
2      <asn>65000</asn>
3      <neighbors>
4          <peer-ip-address>198.18.0.1</peer-ip-address>
5          <remote-as>65000<remote-as/>
6          <enabled-af>ipv4</enabled-af>
7      </neighbors>
8      <neighbors>
9          <peer-ip-address>198.18.101.1</peer-ip-address>
10         <remote-as>65001<remote-as/>
11         <enabled-af>ipv4</enabled-af>
12         <enabled-af>ipv6</enabled-af>
13     </neighbors>
14 </bgp>
```

```
container bgp {
  leaf asn { type uint32; }
  list neighbors {
    key "peer-ip-address";
    leaf peer-ip-address { type inet:ipv4-address; }
    leaf remote-as { type uint32; }
    leaf-list enabled-af { type string; }
  }
}
```
- A.

```
container bgp {
  leaf asn { type uint32; }
  container neighbors {
    leaf peer-ip-address { type inet:ipv4-address; }
    leaf remote-as { type uint32; }
    leaf enabled-af { type string }
  }
}
```
- B.

```
container bgp {
  leaf asn { type inet:as-number; }
  list neighbors {
    key "peer-ip-address";
    leaf peer-ip-address { type inet:ipv4-address; }
    leaf remote-as { type uint32; }
    leaf enabled-af { type string }
  }
}
```
- C.

```
container bgp {
  leaf asn { type inet:as-number; }
  container neighbors {
    leaf peer-ip-address { type inet:ipv4-address; }
    leaf remote-as { type uint32; }
    leaf-list enabled-af { type string }
  }
}
```

- D.

Answer: D

Explanation:
The XML instance uses a <neighbors> container that allows multiple <peer-ip-address>,
<remote-as>, and multiple <enabled-af> entries under each neighbor, matching the structure and leaf-list of enabled-af. This aligns with the way address families are modeled as a list in the YANG definition.

NEW QUESTION # 64

......

The latest 300-535 exam prep is created by our IT experts and certified trainers who are dedicated to Cisco braindumps pdf for a long time. All questions of our 300-535 PDF VCE are written based on the real questions. Besides, we always check the updating of 300-535 exam questions to make sure exam preparation smoothly.
