We take the rights of the consumer into consideration. So as a company that aimed at the exam candidates of 156-836 study guide, we offer not only free demos, Give three versions of our 156-836 exam questions for your option, but offer customer services 24/7. Even if you fail the 156-836 Exams, the customer will be reimbursed for any loss or damage after buying our 156-836 training materials. Besides, you can enjoy free updates for one year as long as you buy our exam dumps.

CheckPoint 156-836 Certification Exam is a great way for professionals to demonstrate their advanced knowledge and skills in managing large-scale security infrastructures using Check Point Maestro. It is an opportunity to enhance their credibility and marketability. If you have prior experience and knowledge in this field, this certification can undoubtedly take your career to the next level.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q67-Q72):

NEW QUESTION # 67

At a minimum, how many management and Uplink ports does a SG require?

- A. Two of each.
- B. Only one of the two interfaces is needed for the Security Group.
- **C. One each.**
- D. Neither are required.

Answer: C

Explanation:

A Security Group (SG) requires at least one management port and one uplink port to function properly. The management port is used to connect the SG to the Maestro Hyperscale Orchestrator (MHO) and the customer's management infrastructure, such as SmartConsole or SmartDomain Manager. The uplink port is used to connect the SG to the customer's network infrastructure, such as switches, routers, or firewalls. The uplink port is also used to send and receive traffic from the customer's network to the SG.

NEW QUESTION # 68

What can be learned from the output of `sx_api_ports_dump.py` command?

- A. Orchestrator port status
- **B. Information about backplane bonds**
- C. Information about Security Groups
- D. Information about downlink ports only

Answer: B

Explanation:

NEW QUESTION # 69

When a VPN tunnel is formed with a Maestro SGM,

- A. The MHO distributes copies of the packets to two different SGMs because SGM 1 will handle the clear traffic IKE exchange packets, while SGM2 handles encrypted packets.
- **B. The MHO handles the IKE before distributing the traffic to a SGM to handle all encrypted traffic. This helps to prevent any issues with the correction layer.**
- C. The receiving SGM makes an encryption decision. The SGM then syncs the traffic to two backup SGMs: one for clear traffic and one for encrypted traffic.
- D. SGM 1 analyzes the policy and topology. If encryption is required, it calculates the tunnel owner's IP address. SGM 1 sends a clear packet to the tunnel owner. SGM 2 is now the connection and tunnel owner.

Answer: B

Explanation:

Explanation

In scalable security environments, initial IKE (Internet Key Exchange) handling by a central orchestrator before distributing traffic for encryption is a common approach to maintain efficiency and security.

NEW QUESTION # 70

When working with Maestro, what is the difference between using Clish and gClish?

- **A. Clish commands apply only to a specific SG member. gClish commands apply to all UP SG members, by default.**
- B. Clish commands are for testing purposes only and cannot be saved, gClish commands apply to all SG members, by default.
- C. Clish commands apply to all UP SG members, by default. gClish commands apply to all SG members, by default.
- D. Clish commands are run on the SG members. gClish commands are run on the MHO and applied to all connected SG members in a specified group.

Answer: A

Explanation:

Explanation

This is the correct answer because it describes the difference between using Clish and gClish when working with Maestro. Clish is the Check Point command line shell that allows users to configure and manage the SG members individually. gClish is the global Clish that allows users to run commands on all UP SG members of the current Security Group at once. UP SG members are theones that are in the UP state and have the same policy installed as the SMO Master.

NEW QUESTION # 71

What cannot be a reason for "Failed to get remote orchestrator interfaces" error message, when clicking on "Orchestrator" in WebUI

- **A. Remote orchestrator has no empty interfaces**
- B. No Sync between orchestrators
- C. Single orchestrator environment, but configured Orchestrator amount is 2
- D. One orchestrator only, but Orchestrator amount is 2 or no Sync in between orchestrators

Answer: A

Explanation:

Explanation

One of the possible reasons for the "Failed to get remote orchestrator interfaces" error message, when clicking on "Orchestrator" in WebUI, is that the remote orchestrator has no empty interfaces that can be assigned to a security group. This can happen if all the interfaces on the remote orchestrator are already part of configured security groups, or if the remote orchestrator has no physical interfaces at all. In this case, the WebUI cannot display the unassigned interfaces of the remote orchestrator, and shows the error message.
