## PDII-JPN Download Fee - 100% High-quality Questions Pool

Obtaining a certificate for an exam can have many benefits, and it will build up your competitive force in the job market and help you to enter a big enterprise and so on. PDII-JPN exam braindumps of us will help you get the certificate successfully. With professional experts to revise the questions and answers, PDII-JPN Exam Braindumps are of high quality. PDII-JPN exam dumps contain knowledge points, and it can help you have a good command of the exam. Choose us, it will become more easily for you to pass the exam.

## Salesforce Sample Questions (Q141-Q146):

### NEW QUESTION # 141

開発者は、Lightning データテーブル内のレコードのリストを表示する Lightning Web コンポーネントを作成しています。新しいレコードをデータベースに保存した後、リストが更新されません。

```
data;  
@wire(recordList, {recordId : '{recordId}');  
records(result){  
    if(result.data){  
        this.data = result.data;  
    } else if(result.error){  
        this.showToast(result.error);  
    }  
}
```

これを実現するには、開発者は上記のコードの何を变更する必要がありますか起こる？

- A. 結果を保存する新しい変数を作成し、@track アノテーションを付けます。
- B. this.data で refreshApex() を呼び出します。
- C. @track デコレータをデータ変数に追加します。
- D. 結果を格納する変数を作成し、refreshApex() を呼び出します。

**Answer: D**

Explanation:

The change that the developer should make in the code above for the list to update after saving a new record to the database is to create a variable to store the result and call refreshApex(). The refreshApex() function is used to refresh the cached result of an Apex method that is wired to a property. The function takes the result object as a parameter, and re-runs the Apex method to get the updated data. The developer should assign the result object to a variable in the records() function, and then pass that variable to the refreshApex() function in the handleSave() function, after the record is saved successfully. This way, the list will reflect the new record in the data table. Calling refreshApex() on this.data will not work, as this.data is the property that holds the data for the data table, not the result object that holds the cached data from the Apex method. Creating a new variable to store the result and annotate it with @track will not work, as @track is used to make a property reactive, not to refresh the data from the Apex method. Adding the @track decorator to the data variable will not work, as @track is used to make a property reactive, not to refresh the data from the Apex method. Reference: [Refresh the Cache of an Apex Wire Method], [Lightning Web Components Developer Guide]

### NEW QUESTION # 142

開発者は、スマートフォンでは1列、タブレット/デスクトップでは2列で表示する Lightning Web コンポーネントを必要としています。開発者はコードにどの部分を追加すればよいのでしょうか？

- A. <lightning-layout-item> 要素に size="6" small-device-size="12" を追加します。
- B. <lightning-layout-item>要素に medium-device-size="6"を追加します。
- C. <lightning-layout-item> 要素に size="12" medium-device-size="6" を追加します。
- D. <lightning-layout-item>要素に small-device-size="12"を追加します。

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation:

The lightning-layout grid system uses a 12-column model. To achieve a responsive design, developers use attributes that target different screen breakpoints.

\* size: Defines the default size (usually targeting the smallest devices if no other attributes are present).

\* medium-device-size: Targets tablets and small desktops.

\* large-device-size: Targets large monitors.

To show one column on a phone, an item must occupy all 12 columns (size="12"). To show two columns on a tablet/desktop, each item must occupy 6 columns (medium-device-size="6").

Option A correctly implements this. While small-device-size exists, the size attribute itself typically serves as the baseline for small devices. If you set size="12" and medium-device-size="6", the component will "stack" on phones and sit side-by-side on anything larger.

### NEW QUESTION # 143

開発者は、新しい AppExchange アプリケーションの開発を依頼されました。プログラムの機能は、ケースが特定の段階に達し、特定のレコードタイプである場合に調査レコードを作成します。さまざまな Salesforce インスタンスがさまざまなタイミングで調査を必要とするため、この機能は構成可能である必要があります。さらに、すぐに使用できる AppExchange アプリには、ほとんどの顧客に適用される一連のベストプラクティス設定が必要です。

開発者は、アプリのカスタム構成設定を保存およびパッケージ化するために何を使用する必要がありますか？

- A. カスタム設定
- B. カスタム メタデータ
- C. プロセスビルダー
- D. カスタム オブジェクト

**Answer: B**

### NEW QUESTION # 144

```

trigger AssignOwnerByRegion on Account ( before insert, before update )

list<Account> accountList = new List<Account>();
for( Account anAccount : trigger.new )

    region_c theRegion = [
        SELECT Id, Name, Region_Manager__c FROM Region_c WHERE Name = :anAccount -Region_Name__c];
    anAccount.OwnerId = theRegion.Region_Manager__c;accountList.add( anAccount );

update accountList;

```

上記のトリガーは、アカウントをアカウントのリージョンのマネージャーに割り当てることを目的としており、と考えてください。開発者がベストプラクティスに従うために、このトリガーに加えるべき2つの変更はどれですか?2つの答えを選択してください

- A. accountList を更新する最後の行は不要なので削除します。
- B. マップを使用して、Region\_\_c クエリの結果を ID ごとにキャッシュします。
- C. リスト accountList の代わりにマップ accountMap を使用します。
- D. Region\_\_c クエリをループの外に移動します。

**Answer: A,D**

#### NEW QUESTION # 145

Visualforce ページには業界選択リストが含まれており、[業界] 項目に一致する値を持つ取引先のテーブルが表示されます。

```

<apex:selectList value="{!selectedIndustry}">
    <apex:selectOptions values="{!industries}" />
</apex:selectList>

```

ユーザーが業界選択リストの値を変更すると、アカウントのテーブルが自動的に更新され、選択した業界に関連付けられたアカウントが表示されます。

これを実装する最適な方法は何ですか?

- A. Add an <apex: actionSupport> within the <apex: selectOptions>.
- B. Add an <apex: actionFunction> within the <apex: selectOptions>.
- C. Add an <apex: actionFunction> within the <apex: select List >.
- D. Add an <apex: actionSupport> within the <apex:selectList>.

**Answer: C**

#### NEW QUESTION # 146

.....

As is known to us, the leading status of the knowledge-based economy has been established progressively. It is more and more important for us to keep pace with the changeable world and improve ourselves for the beautiful life. Our company can help you solve the problem and get your certification, because our company has compiled the PDII-JPN question torrent that not only have high quality but also have high pass rate. We believe that our PDII-JPN exam questions will help you get the certification in the shortest. So hurry to buy our PDII-JPN exam torrent, you will like our products.
