ServiceNow CAD Dump Check - Exam CAD Bible

Passing the CAD exam requires many abilities of you: personal ability, efficient practice materials, as well as a small touch of luck. So your personal effort is brilliant but insufficient to pass exam, and our CAD exam materials can facilitate the process smoothly and successfully. Our CAD Study Dumps are suitable for you whichever level you are in right now. Whether you are in entry-level position or experienced exam candidates who have tried the exam before, this is the perfect chance to give a shot.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q118-Q123):

NEW QUESTION # 118
Which one of the following is NOT a purpose of application scoping?

- A. Provide controls for how scripts from another scope can alter tables in a scoped application
- B. Provide a namespace (prefix and scope name) to prevent cross application name collisions
- C. Provide a way of tracking the user who developed an application
- D. Provide a relationship between application artifacts

Answer: C

Explanation:
The purpose of application scoping is NOT to provide a way of tracking the user who developed an application. Application scoping does not store or display information about the user who created or modified an application or its artifacts. The purpose of application scoping is to provide a relationship between application artifacts, provide a namespace to prevent cross-application name collisions, and provide controls for how scripts from another scope can alter tables in a scoped application. NEW QUESTION # 119
If you create a SOAP Message, what syntax indicates a variable to pass when the function is called?

- A. S{variable_name}
- B. < variable_name >
- C. < variable_name >.do?WSDL
- D. current.variable_name

Answer: A

Explanation:
In the SOAP Message feature set, we indicate variables using the following syntax: S{variable_name}. This allows us to pass a variable with the specified name from the SOAP message record to the web service function.

NEW QUESTION # 122
What is a workflow context?

- A. It is a checked out workflow which is being edited
- B. The table for which a workflow is defined plus any conditions such as "Active is true"
- C. It is generated from a workflow version, executes activities, and follows transitions
- D. The business reason or process for which a workflow is designed

Answer: C

Explanation:
A workflow is a tool that allows you to automate processes on the ServiceNow platform. A workflow consists of activities and transitions that define the logic and flow of the process. A workflow context is an instance of a workflow that is generated from a workflow version, executes activities, and follows transitions. A workflow context is associated with a specific record on a table and tracks the state and progress of the workflow. You can view and manage the workflow contexts from the Workflow Contexts module or the Workflow Contexts related list on a record.
The other options are not valid definitions of a workflow context. A checked out workflow is a workflow that is being edited by a user and has not been published yet. The table and conditions for a workflow are the criteria that determine when a workflow should run on a record. The business reason or process for a workflow is the purpose and function of the workflow.
