

# Fresh 156-836 Dumps - Test 156-836 Collection

2026 Latest Prep4sureExam 156-836 PDF Dumps and 156-836 Exam Engine Free Share: <https://drive.google.com/open?id=1v0LoUaJbRwGMcoZn34dDagRPEtrhJDxD>

Prep4sureExam provides you with actual CheckPoint 156-836 dumps in PDF format, Desktop-Based Practice tests, and Web-based Practice exams. These 3 formats of Check Point Certified Maestro Expert - R81 (CCME) exam preparation are easy to use. This is a printable CheckPoint 156-836 PDF dumps file. The CheckPoint 156-836 Pdf Dumps enables you to study without any device, as it is a portable and easily shareable format, thus you can study CheckPoint 156-836 dumps on your preferred smart device such as your smartphone or in hard copy format.

The CCME certification program is designed for security professionals who are responsible for managing and securing large enterprise networks. It is ideal for network security architects, network security engineers, senior security analysts, and other security professionals who have a deep understanding of network security and experience in deploying and managing large-scale security architectures.

The Check Point Maestro solution provides IT professionals with the ability to manage and scale their security infrastructure with ease, allowing them to secure their networks and applications without compromising performance or availability. The CCME certification exam covers a range of topics, including the architecture of the Check Point Maestro solution, the deployment and configuration of Maestro clusters, and the management of multiple gateways and security policies.

## Pass Guaranteed Fantastic CheckPoint - 156-836 - Fresh Check Point Certified Maestro Expert - R81 (CCME) Dumps

The contents of 156-836 study materials are all compiled by industry experts based on the 156-836 examination outlines and industry development trends over the years. It does not overlap with the content of the 156-836 question banks on the market, and avoids the fatigue caused by repeated exercises. Our 156-836 Exam Guide is not simply a patchwork of exam questions, but has its own system and levels of hierarchy, which can make users improve effectively.

## CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q75-Q80):

### NEW QUESTION # 75

What is the difference between Dual-Site and Dual-Room?

- A. They are the same
- B. Dual-Room is a kind of Dual-Site deployment within the same building
- C. Dual-Room is a Single-Site deployment where all Appliances are connected to both orchestrators
- D. Dual-Room is Active / Standby and Dual-Site is Active / Active

**Answer: B**

Explanation:

References =

\*[Maestro Frequently Asked Questions (FAQ)]

\*Maestro Dual Site configuration with a direct connection through L2 switches

\*Dual Site Single Maestro Hyperscale Orchestrator Cluster (Dual Site Single MHO Redundancy)

\*CHECK POINT MAESTRO EXPERT

### NEW QUESTION # 76

What is the difference between Dual-Site and Dual-Room?

- A. They are the same
- **B. Dual-Room is a kind of Dual-Site deployment within the same building**
- C. Dual-Room is a Single-Site deployment where all Appliances are connected to both orchestrators
- D. Dual-Room is Active / Standby and Dual-Site is Active / Active

**Answer: B**

Explanation:

Explanation

### NEW QUESTION # 77

What does `asg monitor` command do?

- **A. Show real-time cluster status of Appliances in Security Group**
- B. This command does not exist
- C. Monitor traffic on Appliances in Security Group
- D. Monitor health status of entire system

**Answer: A**

Explanation:

The "`asg monitor`" command generally would show real-time cluster status of appliances in a security group, focusing on health and operational status.

### NEW QUESTION # 78

What is the purpose of `g_tcpdump` command?

- A. Collects traffic dump from Sync network
- B. Collects traffic dump from CIN network
- **C. Collects traffic dump from all Active Appliances within Security Group**
- D. The same as `tcpdump`, just on Scalable Platform

**Answer: C**

Explanation:

Explanation

`_tcpdump` probably collects traffic dumps from all active appliances within a security group, aligning with the naming convention and function of similar commands in scalable platforms.

### NEW QUESTION # 79

In a Maestro Dual Site environment, what is the definition of the term Standby Site?

- A. The Standby Site is the site currently handling the enforcement on traffic passing for a specific SG. Connections are synced within the SGMs in the Active Site.
- **B. The Standby Site is the site that is not handling any traffic for the specific SG, but its connections are synced to its SGMs from the MHOs to be ready in the event of a failover.**
- C. There is no such thing as an active site. In a Dual Site environment, traffic is load balanced.
- D. The Standby Site is the second site to have been defined in the process of configuring the Dual Site environment.

**Answer: B**

Explanation:

In a Maestro Dual Site environment, the Standby Site is defined as the site that is not currently handling traffic for a specific Security Group (SG). Instead, it maintains synchronized connections with its Security Group Members (SGMs) via the Maestro Hyperscale Orchestrators (MHOs), ensuring it is ready to take over in the event of a failover. This setup enhances high availability and disaster recovery.

Exact Extract:

"In a Maestro Dual Site environment, the Standby Site is the site that is not handling any traffic for the specific Security Group, but its connections are synced to its Security Group Members (SGMs) from the Maestro Hyperscale Orchestrators (MHOs) to be ready in the event of a failover. This ensures high availability and seamless failover capabilities."

-Check Point Certified Maestro Expert (CCME) R81.X Courseware, Module 3: Dual Orchestrator Environment, Lesson 3.1:

Introduction to Dual Orchestrator Environment, page 3-7

-Check Point R81 Maestro Administration Guide, Chapter 3: Working with Security Group Modules, Section: Dual Site Configuration, page 3-9 Explanation of Options:

- \* A. The Standby Site is the site that is not handling any traffic...: Correct, as this accurately describes the role of the Standby Site in a Dual Site environment, per the documentation.
- \* B. There is no such thing as an active site...: Incorrect, as Maestro Dual Site environments explicitly define Active and Standby Sites, not load-balanced traffic across both sites.
- \* C. The Standby Site is the second site to have been defined...: Incorrect, as the Standby Site is defined by its role (not handling traffic), not the order of configuration.
- \* D. The Standby Site is the site currently handling the enforcement...: Incorrect, as this describes the Active Site, not the Standby Site.
