Scrum SAFe Product Owner/Product Manager POPM (6.0) Sample Questions (Q50-Q55):

NEW QUESTION # 50

How often does the Innovation and Planning (IP) Iteration occur?

- A. Every two PIs
- **B. During every PI**
- C. Once per year
- D. Every two Iterations

Answer: B

Explanation:

The Innovation and Planning (IP) Iteration is a special iteration that occurs during every Program Increment (PI). It serves as an estimating buffer for meeting PI Objectives and provides dedicated time for innovation, continuing education, PI Planning, and Inspect and Adapt events.

NEW QUESTION # 51

What is one step when determining initial team capacity during PI Planning?

- A. Ensure Product Owner/Product Manager approval for all time-based capacity adjustments
- **B. Subtract one point for every team member 's vacation day, public holiday, or training day**
- C. Compare final team capacity across all teams
- D. Add together all of the points from recently completed Features

Answer: B

Explanation:

One step when determining initial team capacity during PI Planning is to subtract one point for every team member's vacation day, public holiday, or training day. This step helps the team to adjust their capacity based on the actual availability of each team member for the upcoming Program Increment (PI)¹. By accounting for the time-based capacity adjustments, the team can plan their work more realistically and avoid overcommitting or underdelivering².

NEW QUESTION # 52

What is one benefit of capacity allocation?

- **A. It prevents different types of backlog items from being compared against each other**
- B. It allocates developers and testers to an initiative
- C. It ensures all Value Streams in the Portfolio are appropriately funded
- D. It enables effective time-tracking

Answer: A

Explanation:

Capacity allocation is an allocation of work by work item type for an upcoming planning period¹. It helps the Agile Teams to balance their investments across different types of backlog items, such as new features, enablers, defects, and technical debt². One benefit of capacity allocation is that it prevents different types of backlog items from being compared against each other based on their relative value or priority, which can be misleading or subjective³. Instead, capacity allocation allows the teams to focus on delivering value and quality in each work item type, without compromising the other².

NEW QUESTION # 53

What is one input to the Vision?

- A. Feature context
- B. Team topologies
- **C. Customer feedback**
- D. Portfolio Backlog

Answer: C

Explanation:

One input to the Vision is customer feedback. Customer feedback is the information and opinions that customers and stakeholders provide about the solution, its features, and its value proposition¹. Customer feedback helps to validate the assumptions, test the hypotheses, and measure the satisfaction of the solution².

Customer feedback also helps to identify the needs, preferences, and expectations of the customers and stakeholders, which are essential for defining and communicating the Vision³. The Vision is a description of the future state of the solution under development, and it reflects the problem(s) that the solution will solve and the benefits that it will deliver⁴.

NEW QUESTION # 54

What is one method for designing the end-to-end Customer experience?

- **A. Journey mapping**
- B. Persona development
- C. Feature storming
- D. Whole-product thinking

Answer: A

Explanation:

Explanation

Journey mapping is one method for designing the end-to-end customer experience. It is a visual representation of the steps, emotions, and pain points that a customer goes through when interacting with a product or service. It helps to identify the customer needs, expectations, and goals, as well as the gaps and opportunities for improvement in the current experience. Journey mapping also helps to align the stakeholders on the customer perspective and prioritize the features and solutions that will deliver the most value and satisfaction¹²³ References:
