SAP Reliable C-TADM-23 Exam Questions: Certified Technology Consultant - SAP S/4HANA System Administration - Itcertking Test Engine Simulation

It would take a lot of serious effort to pass the SAP C-TADM-23 exam, therefore it wouldn't be simple. So, you have to prepare yourself for this. But since we are here to assist you, you need not worry about how you will study for the Certified Technology Consultant - SAP S/4HANA System Administration (C-TADM-23) exam dumps. You can get help from us on how to get ready for the SAP C-TADM-23 Exam Questions. We will accomplish this objective by giving you access to some excellent C-TADM-23 practice test material that will enable you to get ready for the Certified Technology Consultant - SAP S/4HANA System Administration (C-TADM-23) exam dumps.

SAP Certified Technology Consultant - SAP S/4HANA System Administration Sample Questions (Q78-Q83):

NEW QUESTION # 78

You are logged onto an AS ABAP-based SAP system

What happens when you release a task of a transport request that contains changes to a program?

- A. The repository locks are released.
- B. The object list of the task is handed over to the transport request**
- C. A data file and a cofile are created.
- D. A temporary version is created in version management.

Answer: B

Explanation:

When you release a task of a transport request that contains changes to a program in an AS ABAP-based SAP system, the object list of the task is handed over to the transport request (C). This means that all the objects associated with that task, including programs, function modules, tables, etc., are consolidated under the transport request, preparing it for transport to another system. Repository locks (A) are not released until the entire transport request is released, ensuring the consistency of changes. A temporary version in version management (B) might be created during the editing of objects, but this is not directly related to the task release. The creation of a data file and a cofile (D) occurs when the transport request itself is released, not just an individual task within it.

NEW QUESTION # 79

You are updating an AS Java-based SAP system

Which actions can Software Update Manager execute? Note: There are 2 correct answers to this question.

- A. Lock the development environment
- B. Request a Modification Adjustment
- C. Update without using a stack configuration file (stack xml file)
- D. Check the archives' authenticity

Answer: B,D

NEW QUESTION # 80

When restarting an Additional Application Server instance, which profiles are evaluated? Note: There are 2 correct answers to this question

- A. Instance profile of the Additional Application Server
- B. Instance profile of the Primary Application Server
- C. Default profile
- D. Instance profile of the Central Services instance

Answer: A,B

NEW QUESTION # 81

In ABAP programs, what are features of ABAP SQL that are not available with native SQL?

Note: There are 2 correct answers to this question

- A. Execution without a work process
- B. Use of the AS ABAP data buffer
- C. Database independence
- D. Execution of ABAP programs as database procedures

Answer: B,C

Explanation:

ABAP SQL and native SQL are two methods of executing SQL statements within ABAP programs in SAP systems. ABAP SQL, also known as Open SQL, offers certain features not available with native SQL:

* B. Database independence: ABAP SQL provides a level of abstraction from the underlying database system, allowing developers to write database-agnostic code. This means that the same ABAP SQL code can run on any database supported by SAP, such as SAP HANA, Oracle, or Microsoft SQL Server, without modification. This database independence simplifies code maintenance and enhances portability across different SAP system environments.

* D. Use of the AS ABAP data buffer: ABAP SQL leverages the application server's data buffering capabilities, which can significantly improve performance by reducing database access. When data is read using ABAP SQL, it can be retrieved from the buffer if it has been accessed recently, instead of making a round trip to the database. This feature is particularly beneficial for frequently accessed, read-intensive data, contributing to reduced database load and faster data retrieval.

These features underscore the advantages of using ABAP SQL for database operations within ABAP programs, offering enhanced portability, performance, and ease of use in a multi-database SAP landscape.

NEW QUESTION # 82

How can you register multiple SAP Gateway services simultaneously? Note: There are 2 correct answers to this question.

- A. Using task list SAP_GATEWAY_BASIC_CONFIG.
- B. Using transaction /IWFND/MAINT_SERVICE.
- C. Using task list SAP_GATEWAY_ACTIVATE_ODATA_SERV.
- D. Using transaction /IWFND/GW_CLIENT.

Answer: B,C

NEW QUESTION # 83

The Certified Technology Consultant - SAP S/4HANA System Administration (C-TADM-23) exam dumps are real and updated C-TADM-23 exam questions that are verified by subject matter experts. They work closely and check all Certified Technology Consultant - SAP S/4HANA System Administration (C-TADM-23) exam dumps one by one. They maintain and ensure the top standard of Certified Technology Consultant - SAP S/4HANA System Administration (C-TADM-23) exam questions all the time.
