COF-C02 Exam Torrent: SnowPro Core Certification Exam & COF-C02 Exam Questions & Answers

We guarantee that if you study our COF-C02 guide materials with dedication and enthusiasm step by step, you will desperately pass the exam without doubt. As the authoritative provider of study materials, we are always in pursuit of high pass rate of COF-C02 practice test compared with our counterparts to gain more attention from potential customers. Otherwise if you fail to pass the exam unfortunately with our COF-C02 Study Materials, we will full refund the products cost to you soon. Our COF-C02 study torrent will be more attractive and marvelous with high pass rate.

Snowflake COF-C02 (SnowPro Core Certification) certification exam is a comprehensive test that validates an individual's expertise

in using Snowflake's cloud data platform. SnowPro Core Certification Exam certification is designed for professionals who work with data and want to demonstrate their proficiency in managing, processing, and analyzing data using Snowflake. The SnowPro Core Certification exam is an excellent way for professionals to showcase their knowledge and skills and gain recognition in the industry.

Snowflake SnowPro Core Certification Exam Sample Questions (Q777-Q782):

NEW QUESTION # 777

What information is stored in the ACCESS_HISTORY view?

- **A. Details around the privileges that have been granted for all objects in an account**
- B. Query details such as the objects included and the user who executed the query
- C. Names and owners of the roles that are currently enabled in the session
- D. History of the files that have been loaded into Snowflake

Answer: A

Explanation:

Details around the privileges that have been granted for all objects in an account. The ACCESS_HISTORY view in Snowflake provides a comprehensive log of access control changes, including grants and revocations of privileges on all securable objects within the account. This information is crucial for auditing and monitoring the security posture of your Snowflake environment. Here's how to understand and use the ACCESS_HISTORY view:

* Purpose of ACCESS_HISTORY View: It is designed to track changes in access controls, such as when a user or role is granted or revoked privileges on various Snowflake objects. This includes tables, schemas, databases, and more.

* Querying ACCESS_HISTORY: To access this view, you can use the following SQL query pattern:

```
SELECT * FROM SNOWFLAKE.ACCOUNT_USAGE.ACCESS_HISTORY WHERE EVENT_TYPE = 'GRANT' OR EVENT_TYPE = 'REVOKE';
```

* Interpreting the Results: The results from the ACCESS_HISTORY view include the object type, the specific privilege granted or revoked, the grantee (who received or lost the privilege), and the timestamp of the event. This data is invaluable for audits and compliance checks.

Reference: For detailed information on the ACCESS_HISTORY view and how to interpret its data, please visit the official Snowflake documentation:

https://docs.snowflake.com/en/sql-reference/account-usage/access_history.html

NEW QUESTION # 778

Which command is used to unload data from a Snowflake table into a file in a stage?

- A. EXTRACT INTO
- B. WRITE
- C. GET
- **D. COPY INTO**

Answer: D

NEW QUESTION # 779

True or False: When Snowflake is configured to use Single Sign-on (sso), Snowflake receive the usernames and credentials from the sso service and loads them into the customer's Snowflake account.

- **A. False**
- B. True

Answer: A

NEW QUESTION # 780

Which Snowflake table supports unstructured data?

- A. Permanent
- B. Transient
- C. Temporary
- D. Directory

Answer: A

Explanation:

While Snowflake primarily deals with structured and semi-structured data, it also has the capability to handle unstructured data. Unstructured data can be stored in Snowflake using variants of SQL data types in tables, which can be permanent tables. These permanent tables, while traditionally used for structured or semi-structured data (like JSON, Avro, or Parquet), can also accommodate unstructured data in the form of binary formats or strings, offering flexibility in data storage and analysis. However, the management and querying of unstructured data in Snowflake may require additional considerations compared to structured data.

NEW QUESTION # 781

Which Snowflake tool is recommended for data batch processing?

- A. The Snowflake API
- B. SnowSQL
- C. Snowsight
- D. SnowCD

Answer: B

Explanation:

For data batch processing in Snowflake, the recommended tool is:

* B. SnowSQL: SnowSQL is the command-line client for Snowflake. It allows for executing SQL queries, scripts, and managing database objects. It's particularly suitable for batch processing tasks due to its ability to run SQL scripts that can execute multiple commands or queries in sequence, making it ideal for automated or scheduled tasks that require bulk data operations. SnowSQL provides a flexible and powerful way to interact with Snowflake, supporting operations such as loading and unloading data, executing complex queries, and managing Snowflake objects from the command line or through scripts.
