Passing the exam just one time is a good wish of every candidate. If you choose us, we can help you pass your exam in your first attempt. C-ACDET-2506 exam braindumps are high quality, and you can improve your efficiency during the preparation. Furthermore, C-ACDET-2506 exam dumps are cover most of the knowledge points for the exam, you can have a good command of the knowledge points during practicing. We have online and offline service for C-ACDET-2506 Exam Materials, if you any questions bother you, you can just have a conversion with us or you can clarify the problem through email, and we will give you reply as quickly as we can.

SAP C-ACDET-2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.
Topic 2	<ul style="list-style-type: none">• Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.

Topic 3	<ul style="list-style-type: none"> • Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.

C-ACDET-2506 Reliable Test Review - Pass C-ACDET-2506 Guarantee

The service of giving the free trial of our C-ACDET-2506 practice engine shows our self-confidence and actual strength about study materials in our company. Besides, our company's website purchase process holds security guarantee, so you needn't be anxious about download and install our C-ACDET-2506 Exam Questions. With our company employees sending the link to customers, we ensure the safety of our C-ACDET-2506 study materials that have no virus.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q59-Q64):

NEW QUESTION # 59

You need to revise a published form template. What steps do you follow?

- A. Delete and recreate
- **B. Create a new version, edit, test, and publish**
- C. Edit directly in production
- D. Clone and change ID

Answer: B

Explanation:

SAP Ariba requires that revisions to published form templates be handled through creating a new version of the template, then editing and testing the draft version before publishing it. The system maintains the prior published version active while you work on the new draft, ensuring no disruption. Cloning and changing IDs is unnecessary and not best practice. Direct edits on published templates are not permitted, and deleting and recreating loses version history and control. This versioning mechanism supports safe, auditable template changes.

NEW QUESTION # 60

Which of the following applies in a Greenfield deployment scenario when migrating configurations from your test site?

- A. If any configuration type fails during the migration process, you cannot create a new migration request.
- B. You can revert migrated configurations from the target site.
- **C. The status changes to Complete when migration is finished.**
- **D. You cannot make other configuration updates in ICM when a migration operation is in progress.**

Answer: C,D

Explanation:

During Greenfield migrations using the Intelligent Configuration Manager (ICM), no other configuration updates can be made in ICM while a migration operation is active to ensure stability and consistency of the migration bundle. Additionally, once the migration finishes successfully, the status updates to "Complete", indicating the configuration is fully migrated and applied.

Contrary to option A, there is no built-in revert or rollback feature in ICM for deployed configurations; changes require new migration cycles. Option D is incorrect because if a migration fails, you can correct the issues and create a new migration request to retry. This process ensures controlled and orderly deployment of configurations.

NEW QUESTION # 61

Which of the following accurately describes the migration of flex master data templates using the migration tool?

- A. Only the data of the flex master data templates is migrated; templates must be created manually.
- **B. The templates are migrated by the tool, but the data must be loaded manually later.**
- C. Both the templates and their data are fully migrated by the tool.
- D. Neither the templates nor the data is migrated using the tool

Answer: B

NEW QUESTION # 62

The full SAP Ariba Strategic Sourcing suite baseline (Greenfield baseline scenario) has been applied to the customer Test site. The customer and project team will configure SAP Ariba Sourcing and deploy that to the Production site, then configure and deploy the remaining solutions in stages. What does this mean for subsequent migration activities?

- A. Both SAP Ariba Sourcing as well as subsequent migration activities would be Brownfield deployments.
- B. Subsequent migration activities will require a complete reconfiguration of existing solutions.
- **C. Subsequent migration activities follow Bluefield deployment scenario.**
- D. If the baseline applied the full suite, the full suite must be configured and migrated to production at the same time.

Answer: C

Explanation:

In SAP Ariba deployments, when a full Greenfield baseline has been applied initially—meaning a fresh, full suite setup on the Test site—and the customer deploys a single solution (like Sourcing) to Production first, all subsequent deployments follow a Bluefield scenario. This means that later stages of deployment (e.g., Contracts, Supplier Risk) involve selective migration and incremental configuration changes to Production without rebuilding everything from scratch. Bluefield scenarios specifically accommodate environments where Production may already be live with transactions, requiring careful selective migration to avoid disruption. This contrasts with Brownfield, which typically involves upgrading or reusing existing deployments without full baseline resets. Also, Greenfield deployments do not require all suite components to migrate simultaneously; phased deployments are supported. This approach ensures minimal risk during deployment and provides flexibility to roll out additional modules progressively. Extract summary: SAP Ariba documentation highlights Bluefield for phased, incremental deployments post Greenfield baseline application to accommodate live production environments.

NEW QUESTION # 63

Which data elements are shared in a Suite-Integrated Environment? Note: There are 3 correct answers to this question.

- **A. Users**
- **B. Suppliers**
- C. Supplier Catalogs
- **D. Exception Types**
- E. User Group mapping

Answer: A,B,D

NEW QUESTION # 64
