If the HA ID for the primary device is 0, what happens if the primary fails and the secondary becomes the primary?

- A. The session will be removed from the session table of the secondary device because of the presence of allowed error packets, which will force the client to restart the session with the server.
- B. The session state is preserved but the kernel will need to re-evaluate the session because NAT was applied.
- C. Traffic for this session continues to be permitted on the new primary device after failover, without requiring the client to restart the session with the server.
- D. The secondary device has this session synchronized; however, because application control is applied, the session is marked dirty and has to be re-evaluated after failover.

答案: C

問題 #125

Refer to the exhibit.

Assuming a default configuration, which three statements are true? (Choose three.)

- A. User A: Pass. The default static route through wan1 passes the RPF check regardless of the source IP address.

- B. User C: Fail. There is no route to 10.0.4.63 using port1 in the routing table.
- C. User B: Fail. There is no route to 95.56.234.24 using wan2 in the routing table.
- D. User B: Pass. FortiGate will use asymmetric routing using wan1 to reply to traffic for 95.56.234.24.
- E. Strict RPF is enabled by default.

答案: B,C,D

問題 #126

Refer to the exhibit, which shows the partial output of command diagnose debug rating.
