SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q22-Q27):

NEW QUESTION # 22
When is a new version of the workflow created?

- A. Automatically after changing the workflow
- B. After manually saving
- C. Automatically after creating a new case
- D. After publishing the workflow

Answer: C

NEW QUESTION # 23
What is a core capability of the transaction code analysis?

- A. It can show the various ways processes are executed in reality across the entire organization
- B. It can check the number of transaction codes used on average for each process step and by company code
- C. It can check the number of transaction codes used on average for one end-to-end process
- D. It can show the average ways processes are executed in a particular company code

Answer: B

Explanation:
Transaction code analysis in SAP Signavio Process Intelligence examines the usage of transaction codes in SAP systems to understand process execution. The documentation details:
* Exact Extract:"Transaction code analysis provides insights into the number of transaction codes used on average for each process step, segmented by company code, to identify variations in process execution across organizational units." (SAP Signavio Process Intelligence User Guide, section on
"Transaction Code Analysis").
* Explanation:
* Option B (It can check the number of transaction codes used on average for each process step and by company code):This is correct as transaction code analysis breaks down the usage of SAP transaction codes (e.g., VA01 for sales order creation) per process step and company code, highlighting differences in how processes are executed.
* Option A (It can check the number of transaction codes used on average for one end-to-end process)is incorrect as the analysis focuses on individual steps, not the entire process.
* Option C (It can show the various ways processes are executed in reality across the entire organization)is incorrect because this is a function of Process Discovery or Variant Explorer, not transaction code analysis.
* Option D (It can show the average ways processes are executed in a particular company code)is incorrect as it describes process variants, not transaction code usage.
Reference:SAP Signavio Process Intelligence User Guide, section on "Transaction Code Analysis"; SAP Certified Associate - Process Data Analyst Study Guide, Chapter 4: Process Analysis Tools.

NEW QUESTION # 24
What are some benefits of Process Mining? Note: There are 3 correct answers to this question.

- A. Ensured compliance
- B. Automated process documentation
- C. Process standardization
- D. Reduced costs
- E. Higher automation rate

Answer: A,C,D

Explanation:
Process Mining provides organizations with actionable insights to optimize their processes. The SAP Signavio documentation highlights:
* Option B (Process standardization):Process Mining identifies variations in process execution, enabling organizations to standardize

processes by adopting best practices and reducing inefficiencies.
* Option D (Reduced costs):By uncovering bottlenecks, redundant steps, or inefficiencies, Process Mining helps organizations streamline operations, leading to cost reductions.
* Option E (Ensured compliance):Process Mining supports compliance by detecting deviations from regulatory or organizational standards, ensuring processes adhere to required guidelines.
* Option A (Automated process documentation)is incorrect because, while Process Mining generates process models (e.g., via Process Discovery), documentation is typically a manual or semi-automated task in SAP Signavio Process Manager.
Reference:SAP Signavio Process Intelligence Documentation, section on "Process Mining Benefits"; SAP Certified Associate - Process Data Analyst Study Guide, Chapter 5: Process Mining Outcomes.

NEW QUESTION # 25
How do you filter all published processes in the workspace?

- A. Type the word "Publishing state" in the search field and press Enter.
- B. Switch to Advanced Search, and select the field "Publishing state".
- C. Type the word "Publish" in the Search field and press Enter.
- D. Switch to Advanced Search, and select the field "Publishing date".

Answer: B

Explanation:
To filter all published processes in the workspace, the most effective method is:
* Option B (Switch to Advanced Search, and select the field "Publishing state"): This option allows users to specifically target the publishing state of processes within the SAP Signavio workspace. By using the Advanced Search functionality and selecting the "Publishing state" field, users can filter the processes based on their publishing status (e.g., published, not published), facilitating the management and review of published processes.

* Managing and Searching for Processes in SAP Signavio

NEW QUESTION # 26
What is a variant in Process Mining?

- A. A variant is a digital footprint of system based events.
- B. A variant visualizes all tasks to complete the process.
- C. A variant is a set of cases with the same sequence of events.
- D. A variant backtracks the process flow.

Answer: B

NEW QUESTION # 27
......
