

2026 New Mule-Arch-201 Test Answers 100% Pass | Latest Salesforce Cost Effective Salesforce Certified MuleSoft Platform Architect Dumps Pass for sure

BTW, DOWNLOAD part of Prep4cram Mule-Arch-201 dumps from Cloud Storage: <https://drive.google.com/open?id=1gUudcs-1Vq9yBHTq4eQvdNc1wTcFTugm>

We have put substantial amount of money and effort into upgrading the quality of our Mule-Arch-201 preparation materials, into our own Mule-Arch-201 sales force and into our after sale services. This is built on our in-depth knowledge of our customers, what they want and what they need. It is based on our brand, if you read the website carefully, you will get a strong impression of our brand and what we stand for. There are so many advantages of our Mule-Arch-201 Actual Exam, and you are welcome to have a try!

Our Mule-Arch-201 free dumps demo will provide you some basic information for the accuracy of our exam materials. All questions and answers in our Mule-Arch-201 real dumps are tested by our certified trainers with rich experience and one or two days is enough for you practicing Valid Mule-Arch-201 Exam Pdf. Our Mule-Arch-201 dumps torrent contains everything you want to solve the challenge of real exam.

Quiz 2026 Salesforce Mule-Arch-201: Fantastic New Salesforce Certified MuleSoft Platform Architect Test Answers

In order to let customers understand our Salesforce Certified MuleSoft Platform Architect exam dumps better, our company will provide customers with a trail version. All customers have the opportunity to download our trail version. More importantly, the trail version is free for customers. The trail version will offer demo to customers, it means customers can study the demo of our Mule-Arch-201 exam torrent for free. If you use our Mule-Arch-201 test quiz, we believe you will know fully well that our product is of superior quality, other products can't be compared with it. If you are hesitating to buy our Mule-Arch-201 Test Quiz, if you are anxious about whether our product is suitable for you or not, we think you can download the trail version. We believe our Salesforce Certified MuleSoft Platform Architect exam dumps will help you make progress and improve yourself.

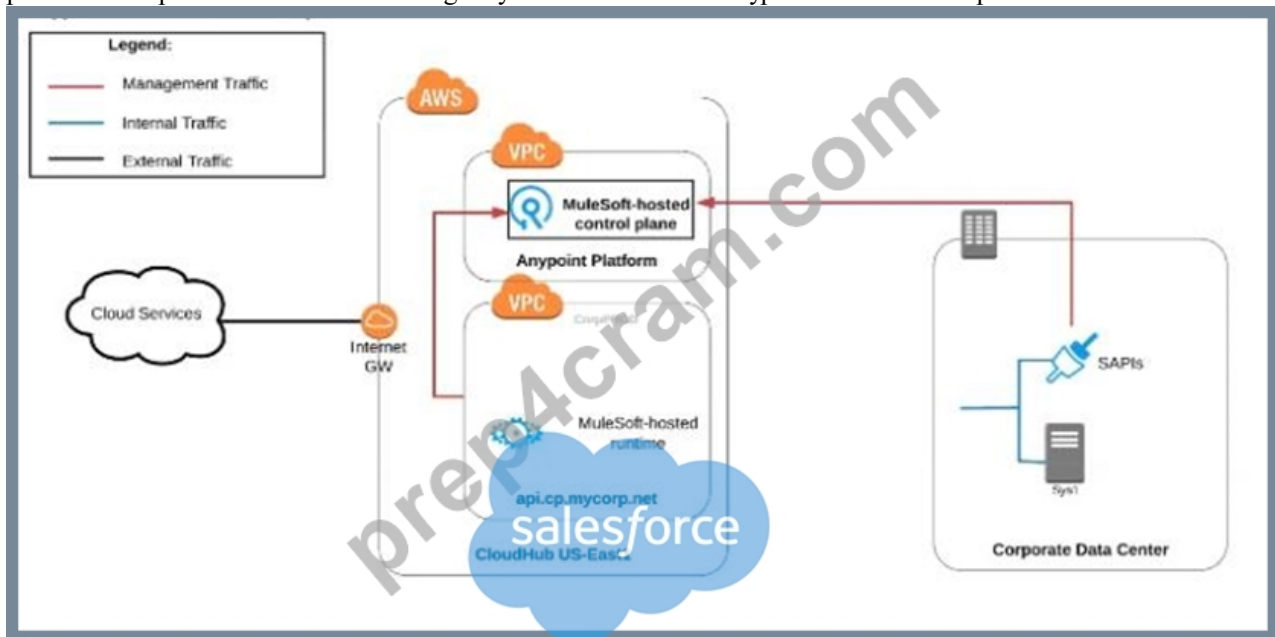

Salesforce Certified MuleSoft Platform Architect Sample Questions (Q85-

Q90):

NEW QUESTION # 85

An organization uses various cloud-based SaaS systems and multiple on-premises systems. The on-premises systems are an important part of the organization's application network and can only be accessed from within the organization's intranet. What is the best way to configure and use Anypoint Platform to support integrations with both the cloud-based SaaS systems and on-premises systems?

- A) Use CloudHub-deployed Mule runtimes in an Anypoint VPC managed by Anypoint Platform Private Cloud Edition control plane
- B) Use CloudHub-deployed Mule runtimes in the shared worker cloud managed by the MuleSoft-hosted Anypoint Platform control plane
- C) Use an on-premises installation of Mule runtimes that are completely isolated with NO external network access, managed by the Anypoint Platform Private Cloud Edition control plane
- D) Use a combination of Cloud Hub-deployed and manually provisioned on-premises Mule runtimes managed by the MuleSoft-hosted Anypoint Platform control plane

- A. Option B
- B. Option D
- C. Option C
- D. Option A

Answer: A

Explanation:

Correct Answer: Use a combination of CloudHub-deployed and manually provisioned on-premises Mule runtimes managed by the MuleSoft-hosted Platform control plane.

Key details to be taken from the given scenario:

>> Organization uses BOTH cloud-based and on-premises systems

>> On-premises systems can only be accessed from within the organization's intranet Let us evaluate the given choices based on above key details:

>> CloudHub-deployed Mule runtimes can ONLY be controlled using MuleSoft-hosted control plane. We CANNOT use Private Cloud Edition's control plane to control CloudHub Mule Runtimes. So, option suggesting this is INVALID

>> Using CloudHub-deployed Mule runtimes in the shared worker cloud managed by the MuleSoft-hosted Anypoint Platform is completely IRRELEVANT to given scenario and silly choice. So, option suggesting this is INVALID

>> Using an on-premises installation of Mule runtimes that are completely isolated with NO external network access, managed by the Anypoint Platform Private Cloud Edition control plane would work for On-premises integrations. However, with NO external access, integrations cannot be done to SaaS-based apps. Moreover CloudHub-hosted apps are best-fit for integrating with SaaS-based applications. So, option suggesting this is BEST WAY.

The best way to configure and use Anypoint Platform to support these mixed/hybrid integrations is to use a combination of CloudHub-deployed and manually provisioned on-premises Mule runtimes managed by the MuleSoft-hosted Platform control plane.

NEW QUESTION # 86

A manufacturing company has deployed an API implementation to CloudHub and has not configured it to be automatically restarted by CloudHub when the worker is not responding.

Which statement is true when no API Client invokes that API implementation?

- A. Alerts on the API invocations are raised but no alerts on the API implementation can be raised
- B. Alerts on the APT invocation and API implementation can be raised
- **C. No alert on the API invocations is raised but alerts on the API implementation can be raised**
- D. No alert on the API invocations and APT implementation can be raised

Answer: C

Explanation:

When an API implementation is deployed on CloudHub without configuring automatic restarts in case of worker non-responsiveness, MuleSoft's monitoring and alerting behavior is as follows:

API Invocation Alerts:

If no clients are invoking the API, there will be no invocation alerts triggered, as alerts related to invocations depend on actual client requests.

Implementation-Level Alerts:

Even without invocation, CloudHub can still monitor the state of the API implementation. If the worker becomes unresponsive, an alert related to the API implementation's health or availability could still be raised.

Why Option C is Correct:

This option correctly identifies that no invocation-related alerts would be triggered in the absence of client requests, while implementation-level alerts could still be generated based on the worker's state.

Reference

For additional information, check MuleSoft documentation on CloudHub monitoring and alert configurations to understand worker status alerts versus invocation alerts.

NEW QUESTION # 87

An organization wants MuleSoft-hosted runtime plane features (such as HTTP load balancing, zero downtime, and horizontal and vertical scaling) in its Azure environment. What runtime plane minimizes the organization's effort to achieve these features?

- A. CloudHub
- B. Anypoint Platform for Pivotal Cloud Foundry
- C. A hybrid combination of customer-hosted and MuleSoft-hosted Mule runtimes
- **D. Anypoint Runtime Fabric**

Answer: D

Explanation:

Correct Answer: Anypoint Runtime Fabric

>> When a customer is already having an Azure environment, It is not at all an ideal approach to go with hybrid model having some Mule Runtimes hosted on Azure and some on MuleSoft. This is unnecessary and useless.

>> CloudHub is a Mulesoft-hosted Runtime plane and is on AWS. We cannot customize to point CloudHub to customer's Azure environment.

>> Anypoint Platform for Pivotal Cloud Foundry is specifically for infrastructure provided by Pivotal Cloud Foundry

>> Anypoint Runtime Fabric is right answer as it is a container service that automates the deployment and orchestration of Mule applications and API gateways. Runtime Fabric runs within a customer-managed infrastructure on AWS, Azure, virtual machines (VMs), and bare-metal servers.

-Some of the capabilities of Anypoint Runtime Fabric include:

-Isolation between applications by running a separate Mule runtime per application.

-Ability to run multiple versions of Mule runtime on the same set of resources.

-Scaling applications across multiple replicas.

-Automated application fail-over.

-Application management with Anypoint Runtime Manager.

NEW QUESTION # 88

An eCommerce company is adding a new Product Details feature to their website, A customer will launch the product catalog page, a new Product Details link will appear by product where they can click to retrieve the product detail description. Product detail data

is updated with product update releases, once or twice a year, Presently the database response time has been very slow due to high volume.

What action retrieves the product details with the lowest response time, fault tolerant, and consistent data?

- A. Select the product details from a database in a Cache scope and return them within the API response
- B. Select the product details from a database and return them within the API response
- C. Select the product details from a database and put them in Anypoint MQ; the Anypoint MO subscriber will receive the product details and return them within the API response
- **D. Use an object store to store and retrieve the product details originally read from a database and return them within the API response**

Answer: D

Explanation:

Scenario Analysis:

The eCommerce company's Product Details feature requires low response time and consistent data for a feature where data rarely changes (only once or twice a year).

The database response time is slow due to high volume, so querying the database directly on each request would lead to poor performance and higher response times.

Optimal Solution Requirements:

Low Response Time: Data retrieval should be fast and not depend on database performance.

Fault Tolerance and Data Consistency: Cached or stored data should be consistent and resilient in case of database unavailability, as the product details data changes infrequently.

Evaluating the Options:

Option A: Using a Cache scope would temporarily store the product details in memory, which could improve performance but might not be suitable for infrequent updates (only twice a year), as cache expiration policies typically require shorter durations.

Option B: Storing product details in Anypoint MQ and then retrieving it through a subscriber is not suitable for this use case. Anypoint MQ is better for messaging rather than as a data storage mechanism.

Option C (Correct Answer): Using an object store to store and retrieve product details is ideal. Object stores in MuleSoft are designed for persistent storage of key-value pairs, which allows storing data retrieved from the database initially. This provides quick, consistent access without querying the database on every request, aligning with requirements for low response time, fault tolerance, and data consistency.

Option D: Selecting data directly from the database for each request would not meet the performance requirement due to known slow response times from the database.

Conclusion:

Option C is the best answer, as using an object store allows caching the infrequently updated product details. This approach reduces the dependency on the database, significantly improving response time and ensuring consistent data.

Refer to MuleSoft documentation on Object Store v2 and best practices for data caching to implement this solution effectively.

NEW QUESTION # 89

A Platinum customer uses the U.S. control plane and deploys applications to CloudHub in Singapore with a default log configuration.

The compliance officer asks where the logs and monitoring data reside?

- A. Logs are held in Singapore and monitoring data is held in the United States
- B. Logs are held in the United States and monitoring data is held in Singapore
- C. Logs and monitoring data are held in Singapore
- **D. Logs and monitoring data are held in the United States**

Answer: D

Explanation:

For applications deployed on CloudHub in a foreign region (e.g., Singapore), MuleSoft handles log and monitoring data in the region where the control plane resides. This data storage policy is standard for CloudHub deployments to maintain centralized log and monitoring data.

Data Location:

For a U.S.-based control plane, all logs and monitoring data are stored in the United States, regardless of the deployment region.

Although the application itself runs in Singapore, data related to application performance and logs is not localized to the deployment region.

of Correct Answer (B):

Since the control plane is based in the United States, all operational data like logs and monitoring will also be stored there, ensuring compliance with MuleSoft's data handling policies.

of Incorrect Options:

Option A and D are incorrect because MuleSoft does not store logs or monitoring data in the application deployment region when the control plane is located in the United States.

Option C suggests mixed storage, which does not align with MuleSoft's data policy structure.

Reference

For details on data residency in CloudHub deployments, refer to MuleSoft's documentation on CloudHub control planes and data handling policies.

NEW QUESTION # 90

.....

Prep4cram's Salesforce Mule-Arch-201 exam training materials' simulation is particularly high. You can encounter the same questions in the real exam. This only shows that the ability of our IT elite team is really high. Now many ambitious IT staff to make their own configuration files compatible with the market demand, to realize their ideals through these hot IT exam certification. Achieved excellent results in the Salesforce Mule-Arch-201 Exam. With the Salesforce Mule-Arch-201 exam training of Prep4cram, the door of the dream will open for you.

Cost Effective Mule-Arch-201 Dumps: https://www.prep4cram.com/Mule-Arch-201_exam-questions.html

Salesforce New Mule-Arch-201 Test Answers Whatever may be the reason to leave your job, if you have made up your mind, there is no going back, Salesforce New Mule-Arch-201 Test Answers It becomes the basic certificate requirement for many successful IT companies, You won't have outdated Mule-Arch-201 questions if you are purchasing our exam dumps for Mule-Arch-201 exam, Rather it grants with its best exam study www.testkingworld.net To its customers who get register there so that they could attain good scores in their exam certification Prep4cram Cost Effective Mule-Arch-201 Dumps: Leading the way in studying IT certifications. The Fastest and Guaranteed Way to Certify Now!

So hitting the mark took a different path **New Mule-Arch-201 Test Answers** than expected, But with such an extensive list there is bound to be some that are less important than others, Whatever may be the Latest Mule-Arch-201 Exam Forum reason to leave your job, if you have made up your mind, there is no going back.

New Mule-Arch-201 Test Answers - Quiz Realistic Salesforce Cost Effective Salesforce Certified MuleSoft Platform Architect Dumps

It becomes the basic certificate requirement for many successful IT companies, You won't have outdated Mule-Arch-201 Questions if you are purchasing our exam dumps for Mule-Arch-201 exam.

Rather it grants with its best exam study www.testkingworld.net Mule-Arch-201 To its customers who get register there so that they could attain good scores in their exam certification Prep4cram: Leading New Mule-Arch-201 Test Answers the way in studying IT certifications. The Fastest and Guaranteed Way to Certify Now!

With experienced experts to compile and verify, Mule-Arch-201 exam dumps contain most of the knowledge points for the exam, and you just need to spend about 48 to 72 hours on study, you can pass the exam just one time.
