Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q91-Q96):

NEW QUESTION # 91

Consider the queries in the options below and the following Information:

* For these queries, assume that there are more than 200,000 Account records.

* These records include soft-deleted records; that is, deleted records that are still in the Recycle Bin.

* There are two fields that are marked as External ID on the Account. These fields are customer_Number_c and ERR_Key_s.

Which two queries are optimized for large data volumes?

Choose 2 answers

- A. **SELECT Id FROM Accounts WHERE Name != 'AND Customer_Number_c- "ValueA'**
- B. SELECT Id FROM Account WHERE Name != NULL
- C. **SELECT Id FROM Account WHERE Name != 'AND IsDeleted = false**
- D. SELECT ID FROM Account WHERE id IN :aListVariable

Answer: A,C

Explanation:

For optimizing queries, especially on large data volumes, it's recommended to use indexed fields such as External ID fields, which will make the queries selective. Among the options given:

B) is optimized because it is using the Customer_Number__c field, which is an External ID and hence indexed.

D) is also optimized because it filters out deleted records with IsDeleted = false and uses Name != '', which is likely to be selective.

Using indexed fields and filtering out unnecessary records helps in faster query execution on large data volumes.

NEW QUESTION # 92

What is a benefit of JavaScript remoting over Visualforce Remote Objects?

- A. Does not require any JavaScript code
- B. **Supports complex server-side application logic**
- C. Does not require any Apex code
- D. Allows for specified re-render targets

Answer: B

NEW QUESTION # 93

Universal Containers wants to notify an external system, in the event that an unhandled exception occurs, by publishing a custom event using Apex.

What is the appropriate publish/subscribe logic to meet this requirement?

- A. Publish the error event using the addError () method and write a trigger to subscribe to the event and notify the external system.
- B. Publish the error event using the addError () method and have the external system subscribe to the event using Comet
- C. **Publish the error event using the EventBus.publish() method and have the external system subscribe to the event using CometD.**
- D. Have the external system subscribe to the event channel. No publishing is necessary.

Answer: C
