New AZ-800 Exam Answers | AZ-800 Test Discount

The best news is that during the whole year after purchasing our AZ-800 study materials, you will get the latest version of our AZ-800 exam prep for free, since as soon as we have compiled a new version of the AZ-800 learning quiz, our company will send the latest one of our AZ-800 training engine to your email immediately. It will be quite fast and convenient to process and our system will auto inform you to free download as long as we update our exam dumps.

Microsoft Administering Windows Server Hybrid Core Infrastructure Sample Questions (Q267-Q272):

NEW QUESTION # 267

SIMULATION

You need to ensure that DC2 is the schema master for contoso.com.
To complete this task, sign in the required computer or computers.

Answer:

Explanation:

Seize operations master roles

You cannot use AD DS snap-ins to seize operations master roles. Instead, you must use either the ntdsutil.exe command-line tool or Windows PowerShell to seize roles.

To seize or transfer the FSMO roles by using the Ntdsutil utility, follow these steps:

Step 1: Sign in to a member computer, in our case DC2, that has the AD RSAT tools installed, or a DC that is located in the forest where FSMO roles are being transferred.

Step 2: Select Start > Run, type ntdsutil in the Open box, and then select OK.

Step 3: Type roles, and then press Enter.

Note:

To see a list of available commands at any one of the prompts in the Ntdsutil utility, type ?, and then press Enter.

Step 4: Type connections, and then press Enter.

Step 5: Type connect to server <servername>, and then press Enter.

Step 6: At the server connections prompt, type q, and then press Enter.

Step 7: To seize the role: Type seize <role>, and then press Enter.

In our case we type: size schema master.

Step 8: At the fsmo maintenance prompt, type q, and then press Enter to gain access to the ntdsutil prompt. Type q, and then press Enter to quit the Ntdsutil utility.

NEW QUESTION # 268

Your network contains a Active Directory Domain Service (AD DS) forest named contoso.com. The forest root domain contains a server named server1. contoso.com

A two-way forest trust exists between the contoso.com forest and an AD DS forest named fabrikam.com. The fabrikam.com forest contains 10 child domains.

You need to ensure that only the members of a group named fabrikam\Group1 can authenticate to server1.contoso.com.

What should you do first?

- A. Add fabrikam\Group1 to the local Users group on server1.contoso.com.
- **B. Enable Selective authentication for the trust.**
- C. Change the trust to a one-way external trust.
- D. Enable SID filtering for the trust.

Answer: B

NEW QUESTION # 269

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You are planning the deployment of DNS to a new network.

You have three internal DNS servers as shown in the following table.

Name	Location	IP address	Local DNS zone
Server1	Montreal	10.0.1.10	contoso.local
Server2	Toronto	10.0.2.10	east.contoso.local
Server3	Seattle	10.0.3.10	west.contoso.local

The contoso.local zone contains zone delegations for east.contoso.local and west.contoso.local. All the DNS servers use root hints.

You need to ensure that all the DNS servers can resolve the names of all the internal namespaces and internet hosts.

Solution: You configure Server2 and Server3 to forward DNS requests to 10.0.1.10.

Does this meet the goal?

- **A. No**
- B. Yes

Answer: A

NEW QUESTION # 270

You have servers that have the DNS Server role installed. The servers are configured as shown in the following table.

Name	Office	Local DNS zone	IP address
Server1	Paris	contoso.com	10.1.1.1
Server2	New York	None	10.2.2.2

All the client computers in the New York office use Server2 as the DNS server.

You need to configure name resolution in the New York office to meet the following requirements:

Ensure that the client computers in New York can resolve names from contoso.com.

Ensure that Server2 forwards all DNS queries for internet hosts to 131.107.100.200.

The solution must NOT require modifications to Server1.

Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. a forwarder
- B. a secondary zone
- C. a delegation
- D. a reverse lookup zone
- E. a conditional forwarder

Answer: A,E

Explanation:

A conditional forwarder is required for contoso.com.

A forwarder is required for all other domains.

When you have a conditional forwarder and a forwarder configured, the conditional forwarder will be used for the specified domain.

You could use a secondary zone for contoso.com but that would require a configuration change on Server1.

NEW QUESTION # 271

Your network contains an Active Directory Domain Services (AD DS) forest named contoso.com. The forest contains a child domain named east.contoso.com.

In the contoso.com domain, you create two users named Admin1 and Admin2.

You need to ensure that the users can perform the following tasks:

- * Admin1 can create and manage Active Directory sites.
- * Admin2 can deploy domain controller to the east.contoso.com domain.

The solution must use the principle of least privilege.

To which group should you add each user? To answer, select the appropriate options in the answer area.

NOTE Each correct selection is worth one point.

Answer Area

Admin1:

Contoso\Administrators

Contoso\Domain Admins

Contoso\Enterprise Admins

East\Administrators

East\Domain Admins

Admin2:

Contoso\Administrators

Contoso\Domain Admins

Contoso\Enterprise Admins

East\Administrators

East\Domain Admins

Answer:

Explanation:
