TestPDF not only provide the products which have high quality to each candidate, but also provides a comprehensive after-sales service. If you are using our AZ-700 products, we will let you enjoy one year of free updates. So that you can get the latest exam information in time. We will be use the greatest efficiency to service each candidate.

Microsoft AZ-700 Certification Exam is intended for Azure networking professionals who have a good understanding of Azure networking concepts and services and have experience in designing and implementing Azure networking solutions. Candidates for AZ-700 exam should have a minimum of two years of experience in designing and implementing Azure networking solutions and should have a good understanding of network security, routing, and load balancing. Successful candidates will be able to design and implement Azure networking solutions that meet the requirements of their organization and ensure the security, scalability, and availability of their Azure resources. The Microsoft AZ-700 Certification Exam is a great way for Azure networking professionals to validate their skills and knowledge and advance their career in the Azure ecosystem.

The AZ-700 Exam is suitable for IT professionals, solution architects, and network engineers who have experience in Azure networking and want to advance their careers. AZ-700 exam covers a wide range of topics, including designing and implementing virtual networks, configuring Azure Firewall and Network Security Groups (NSGs), and implementing Azure load balancers. Candidates must also have knowledge of Azure ExpressRoute and VPN Gateway to establish secure connectivity between on-premises and Azure environments.

Latest AZ-700 Study Plan - Interactive AZ-700 Questions

With the rapid market development, there are more and more companies and websites to sell AZ-700 guide question for learners to help them prepare for exam, but many study materials have very low quality and low pass rate, this has resulting in many candidates failed the exam, some of them even loss confidence of their exam. As for the safe environment and effective product, why don't you have a try for our AZ-700 Test Question, never let you down! Before your purchase, there is a free demo for you. You can know the quality of our AZ-700 guide question earlier.

The AZ-700 Exam covers a broad range of topics related to Azure Networking, including designing and implementing virtual networks, configuring Azure Load Balancer and Traffic Manager, securing access to virtual networks, designing and implementing Azure Application Gateway, and much more.

Microsoft Designing and Implementing Microsoft Azure Networking Solutions Sample Questions (Q227-Q232):

NEW QUESTION # 227

You have two Azure subscriptions named Subscription1 and Subscription2. Subscription1 contains a virtual network named Vnet1. Vnet1 contains an application server. Subscription2 contains a virtual network named Vnet2.

You need to provide the virtual machines in Vnet2 with access to the application server in Vnet1 by using a private endpoint.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer

area and arrange them in the correct order.

Answer:

Explanation:

- 1 - In Subscription1, accept the private endpoint connection request.
- 2 - Enable virtual network peering between Vnet1 and Vnet2.
- 3 - Deploy an Azure Standard Load Balancer in front of the application server.
- 4 - In Subscription1, create a private link service and attach the service to the frontend IP configuration of the load balancer.

NEW QUESTION # 228

You have an Azure subscription that contains the following resources:

- * A virtual network named Vnet1
- * Two subnets named subnet1 and AzureFirewallSubnet
- * A public Azure Firewall named FW1
- * A route table named RT1 that is associated to Subnet1
- * A rule routing of 0.0.0.0/0 to FW1 in RT1

After deploying 10 servers that run Windows Server to Subnet1, you discover that none of the virtual machines were activated. You need to ensure that the virtual machines can be activated.

What should you do?

- **A. On FW1, create an outbound network rule that allows traffic to the Azure Key Management Service (KMS).**
- B. Deploy a NAT gateway.
- C. On FW1, create an outbound service tag rule for AzureCloud.
- D. To Subnet1, associate a network security group (NSG) that allows outbound access to port 1688.

Answer: A

Explanation:

NEW QUESTION # 229

You have an Azure subscription that contains the resources shown in the following table.

Gateway1 provides access to App1 by using a URL of <https://app1.contoso.com>.

You create a new web app named App2.

You need to configure Gateway1 to enable access to App2 by using a URL of <https://app2.contoso.com>. The solution must minimize administrative effort.

What should you configure on Gateway1?

- A. a listener and a backend pool
- B. a backend pool and a routing
- C. a listener and a routing rule
- **D. a listener, a backend pool, and a rule**

Answer: D

Explanation:

You can't use the same backend pool.

NEW QUESTION # 230

You have an Azure subscription that contains the resources shown in the following table.

You discover that users connect directly to App1.

You need to meet The following requirements:

- * Administrators must only access App1 by using a private endpoint.
- * All user connections to App1 must be routed through FD1.
- * The downtime of connections to App1 must be minimized.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

NEW QUESTION # 231

Each subnet contains 50 virtual machines. Multiple virtual machines host instances of SQL Server on Virtual Machines and will be configured to replicate with the Azure SQL Database resources.

- * Minimize modifications to NSG1 when additional instances of SQL Server on Virtual Machines are deployed.
- * Ensure that only SQL Server on Virtual Machines instances can connect to the Azure SQL Database resources.

NOTE: Each correct selection is worth one point.

Answer:

□ Explanation:

NEW QUESTION # 232
