ISQI CPRE-FL_Syll_3.0 (IREB Certified Professional for Requirements Engineering, Foundation Level) Certification Exam is a professional certification designed to test the knowledge and skills of individuals in the field of requirements engineering. IREB Certified Professional for Requirements Engineering, Foundation Level certification is designed to provide a solid foundation in the principles and practices of requirements engineering, including the skills needed to elicit, analyze, validate, and manage requirements throughout the software development lifecycle.

ISQI IREB Certified Professional for Requirements Engineering, Foundation Level Sample Questions (Q173-Q178):

NEW QUESTION # 173

Choose the right option regarding stakeholders.

- A. External users are relatively easy to contact through formal channels.
- **B. Stakeholders in the wider environment (Alexander's onion model) are still relevant.**
- C. The more stakeholders you have found, the harder it becomes to find new ones.
- D. The user is always the most important stakeholder.

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Alexander's onion model distinguishes layers of stakeholders: core (system), involved, affected, and the wider environment. Stakeholders in the wider environment-such as regulators, industry bodies or neighbouring systems-can still influence requirements via regulations, standards or interfaces; they remain relevant for RE, so C is correct. Users are not always the dominant stakeholder; for embedded or technical subsystems, other roles may outweigh them, so A is false. External users are often numerous, anonymous and hard to reach formally, making B wrong. Early stakeholder analysis often exhibits a snowball effect: once some are found, they point to others, so D is also incorrect.

NEW QUESTION # 174

Which of the following is a major task in Requirements Engineering?

- A. Tool support
- **B. Validation of requirements**
- C. Requirements writing
- D. Verification of requirements

Answer: B

NEW QUESTION # 175

A number of factors influence how the RE process should be configured. Which of the following sentences are NOT true?

- A. The less experienced the Requirements Engineers are, the less sophisticated the RE process should be.
- **B. When there is a high degree of trust between the customer and the supplier, more formal specifications should be used.**
- C. When schedules and budgets are constrained, a lightweight RE process is often adopted.
- **D. The stronger the shared understanding, the more complex and rigorous the RE process should be.**
- E. The more complex the system to be implemented is, the more formal and rigorous the RE process should be.

Answer: B,D

NEW QUESTION # 176

A specification is traceable if..

- A. It falls within the relevant system scope, contributing to at least one stakeholder goal.
- B. Its requirements adhere to mandatory structuring or formatting guidelines.
- C. Its requirements reflect the genuine and agreed-upon needs of stakeholders.
- D. Its requirements are linked to their origins, to their implementation and to other dependent requirements.

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Traceability is defined as the ability to follow the life of a requirement in both directions—from its sources to its realization and across related requirements. A traceable specification links each requirement to origin (stakeholder, document), to design and implementation artifacts, and to test cases or other dependent requirements. Option A describes the "necessary" criterion; B corresponds to "adequate"; C refers to "conformant". Only D accurately captures the meaning of traceability for a specification.

NEW QUESTION # 177

Select the two typically highest abstraction levels among the following options.

- A. Business
- B. Component
- C. Subsystem
- D. System
- E. Stakeholder

Answer: A,E

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The abstraction hierarchy described in CPRE starts with business requirements, then stakeholder requirements, and proceeds to system, subsystem and component levels. Business requirements capture organizational goals and strategic intentions. Stakeholder requirements express what different stakeholder groups want in order to fulfill those goals. These are higher-level and less detailed than system/subsystem /component requirements, which are closer to implementation. Therefore Business and Stakeholder represent the highest abstraction levels among the options, while System, Subsystem and Component are progressively more detailed.

NEW QUESTION # 178
