

# 1z0-071 Lab Questions & Guaranteed 1z0-071 Questions Answers

The safer, easier way to help you pass any IT exams.

1. Which two tasks can be performed by using Oracle SQL statements?

- A. changing the password for an existing database
- B. connecting to a database instance
- C. querying data from tables across databases
- D. starting up a database instance
- E. executing operating system (OS) commands in a session

Answer: C,E

2. Evaluate the following two queries:

```
SQL> SELECT cust_last_name, cust_city
FROM customers
WHERE cust_credit_limit IN (1000, 2000, 3000);

SQL> SELECT cust_last_name, cust_city
FROM customers
WHERE cust_credit_limit = 1000 OR cust_credit_limit = 2000 OR
cust_credit_limit = 3000;
```

Which statement is true regarding the above two queries?

- A. Performance would improve query 2 only if there are null values in the CUST\_CREDIT\_LIMIT column.
- B. There would be no change in performance.
- C. Performance would degrade in query 2.
- D. Performance would improve in query 2.

Answer: B

3. Which statement is true regarding external tables?

- A. The default REJECT LIMIT for external tables is UNLIMITED.
- B. The data and metadata for an external table are stored outside the database.
- C. ORACLE\_LOADER and ORACLE\_DATAPUMP have exactly the same functionality when used with an external table.
- D. The CREATE TABLE AS SELECT statement can be used to unload data into regular table in the database from an external table.

Answer: D

4. Which two statements are true about sequences created in a single instance database? (Choose two.)

- A. CURRVAL is used to refer to the last sequence number that has been generated
- B. DELETE <sequencename> would remove a sequence from the database
- C. The numbers generated by a sequence can be used only for one table
- D. When the MAXVALUE limit for a sequence is reached, you can increase the MAXVALUE limit by using the ALTER SEQUENCE statement
- E. When a database instance shuts down abnormally, the sequence numbers that have been cached but not used would be available once again when the database instance is restarted

Answer: A,D

Explanation: Gaps in the Sequence

Although sequence generators issue sequential numbers without gaps, this action occurs independent of a commit or rollback. Therefore, if you roll back a statement containing a sequence, the number is lost. Another event that can cause gaps in the sequence is a system crash. If the sequence caches values in

## Hot 1z0-071 Lab Questions | High Pass-Rate Oracle 1z0-071: Oracle Database SQL 100% Pass

Will you feel that the product you have brought is not suitable for you? One trait of our 1z0-071 exam prepare is that you can freely download a demo to have a try. Because there are excellent free trial services provided by our 1z0-071 exam guides, our products will provide three demos that specially designed to help you pick the one you are satisfied. On the one hand, by the free trial services you can get close contact with our products, learn about the detailed information of our 1z0-071 Study Materials, and know how to choose the right version of our 1z0-071 exam questions.

### Oracle Database SQL Sample Questions (Q248-Q253):

#### NEW QUESTION # 248

View the exhibit and examine the descriptions of the DEPT and LOCATIONS tables.

You want to update the CITY column of the DEPT table for all the rows with the corresponding value in the CITY column of the LOCATIONS table for each department.

Which SQL statement would you execute to accomplish the task?

- A. UPDATE dept dSET city = ALL (SELECT cityFROM locations lWHERE d.location\_id = l.location\_id);
- B. UPDATE dept dSET city = ANY (SELECT cityFROM locations l)
- C. UPDATE dept dSET city = (SELECT cityFROM locations l)WHERE d.location\_id = l.location\_id;
- D. UPDATE dept dSET city = (SELECT cityFROM locations lWHERE d.location\_id = l.location\_id);

**Answer: D**

#### NEW QUESTION # 249

View the exhibit and examine the structure of the EMPLOYEEStable.

You want to display all employees and their managers having 100 as the MANAGER\_ID. You want the output in two columns: the first column would have the LAST\_NAMEof the managers and the second column would have LAST\_NAMEof the employees.

Which SQL statement would you execute?

SELECT m.last\_name "Manager", e.last\_name "Employee"

- A. FROM employees mJOIN employees e  
ON m.employee\_id = e.manager\_id  
WHERE e.manager\_id = 100;  
SELECT m.last\_name "Manager", e.last\_name "Employee"
- B. FROM employees mJOIN employees e  
ON e.employee\_id = m.manager\_id  
WHERE m.manager\_id = 100;  
SELECT m.last\_name "Manager", e.last\_name "Employee"
- C. FROM employees mJOIN employees e  
ON m.employee\_id = e.manager\_id  
WHERE m.manager\_id = 100;  
SELECT m.last\_name "Manager", e.last\_name "Employee"
- D. FROM employees mJOIN employees e  
WHERE m.employee\_id = e.manager\_id AND e.manager\_id = 100

**Answer: A**

#### NEW QUESTION # 250

Examine these SQL statements which execute successfully:

Which two statements are true after execution?

- A. The foreign key constraint will be enabled and IMMEDIATE.
- B. The primary key constraint will be enabled and DEFERRED.
- C. The foreign key constraint will be enabled and DEFERRED.
- D. The primary key constraint will be enabled and IMMEDIATE.
- E. The foreign key constraint will be disabled.

**Answer: A,D**

Explanation:

After the execution of the given SQL statements:

\* B. The primary key constraint will be enabled and IMMEDIATE. This is true. The last statement `ENABLE CONSTRAINT emp_emp_no_pk;` enables the primary key constraint immediately.

\* E. The foreign key constraint will be enabled and IMMEDIATE. This is correct as well. The foreign key constraint `emp_mgr_fk` was not explicitly disabled, so it remains enabled and in the immediate checking mode.

Options A, C, and D are incorrect:

\* A is incorrect because constraints are immediate by default; they are not deferred unless explicitly stated.

\* C is incorrect because the foreign key constraint `emp_mgr_fk` was never disabled with the given statements.

\* D is incorrect because there is no statement altering the foreign key constraint to a deferred state.

#### NEW QUESTION # 251

Which three are true about the MERGE statement?

- A. It can combine rows from multiple tables conditionally to insert into a single table.
- B. It can use views to produce source rows.
- C. It can update the same row of the target table multiple times.
- D. It can merge rows only from tables.
- E. It can update, insert, or delete rows conditionally in multiple tables.
- F. It can use subqueries to produce source rows.

**Answer: B,E,F**

#### NEW QUESTION # 252

Examine these SQL statements which execute successfully:

Which two statements are true after execution? (Choose two.)

- A. The foreign key constraint will be enabled and IMMEDIATE.
- B. The primary key constraint will be enabled and DEFERRED.
- C. The foreign key constraint will be disabled.
- D. The foreign key constraint will be enabled and DEFERRED.
- E. The primary key constraint will be enabled and IMMEDIATE.

**Answer: C,E**

#### NEW QUESTION # 253

.....

To deliver on the commitments of our 1z0-071 test prep that we have made for the majority of candidates, we prioritize the research and development of our 1z0-071 test braindumps, establishing action plans with clear goals of helping them get the 1z0-071 certification. You can totally rely on our products for your future learning path. In fact, the overload of learning seems not to be a good method, once you are weary of such a studying mode, it's difficult for you to regain interests and energy. Therefore, we should formulate a set of high efficient study plan to make the 1z0-071 Exam Dumps easier to operate.
