Pass Guaranteed Useful Salesforce - New Exam B2C-Commerce-Architect Materials

Sometimes a small step is possible to be a big step in life. B2C-Commerce-Architect exam seems just a small exam, but to get the B2C-Commerce-Architect certification exam is to be reckoned in your career. Such an international certification is recognition of your IT skills. In addition, except B2C-Commerce-Architect, many other certification exams are also useful. The latest information of these tests can be found in our DumpStillValid.

Salesforce Certified B2C Commerce Architect Sample Questions (Q27-Q32):

NEW QUESTION # 27

During a technical review, the Client raises a need to display product pricing on the Product Detail Page (PDP) with discounted values per promotion. The Client notes customers complained of bad user experiences in the past when they would add a product to the basket from the cached PDP and then see a higher price when they started checkout as the promotion had expired. What should the Architect suggest be implemented for this given that performance should be minimally impact?

- A. Remove caching of the product page during the promotion.
- B. Adjust the PDP to have a low caching period during the promotion.
- **C. Modify the page to vary the cache by price and promotion.**
- D. Create a separate template or view based on the promotion.

Answer: C

Explanation:

To address the issue of pricing discrepancies on the Product Detail Page (PDP) due to promotions expiring between the page view and checkout, the Architect should suggest modifying the page cache to vary by price and promotion (Answer C). This solution allows the cache to store different versions of the page based on the current price and applicable promotions. By doing so, it ensures that customers always see the most accurate pricing information depending on the active promotions at the time of their visit, thereby improving the user experience and reducing confusion at checkout. This method also minimizes the performance impact compared to completely disabling cache, as it still allows caching but in a more dynamically controlled manner.

NEW QUESTION # 28

Which method is efficient and scalable because it uses the product search index rather than searching the database?

- A. `ProductSearchModel().getProductSearchHits()`
- B. `ProductIndexModel.getOrderableProductsOnly()`
- C. `ProductVariantManager.getVariants()`
- D. `ProductAvailabilityModel.isOrderable()`

Answer: A

NEW QUESTION # 29

During the testing of the login form, QA finds out that the first time the user can log in, but every other login attempt from another computer leads to the homepage and the basket being emptied. Developers tried to debug the issue, but when they add a breakpoint to the login action, it is not hit by the debugger.

What should the Architect recommend developers to check?

- A. Add `<isCacheStatus--off"/>` in the template ISML.
- B. Check Login Form and any included templates for includes that enable page caching.
- C. Remove CSRF protection from Login Form Action.
- D. Add remote include for the login page

Answer: B

Explanation:

When QA encounters issues with login persistence across multiple computers, where subsequent logins lead to a redirection and an emptied basket, the likely culprit could be unintended caching of login-related pages or processes. In Salesforce B2C Commerce, certain cache settings might inadvertently cause user sessions to be shared or not properly invalidated. The recommendation D, to check the login form and related templates for caching directives that might be erroneously caching login actions or user-specific data, addresses this potential issue. Developers should ensure that pages handling user sessions and authentication are configured to disable caching, thus preventing session data from being mistakenly retained or shared across different users.

NEW QUESTION # 30

A third party survey provider offers both an API endpoint for individual survey data and an SFTP server endpoint that can accept batch survey data. The initial implementation of the integration includes

1. Marking the order as requiring a survey before order placement
2. On the order confirmation page, the survey form is displayed for the customer to fill
3. The data is sent to the survey provider API, and the order is marked as not requiring a survey. Later it was identified that this solution is not fit for purpose as the following issues and additional requirements were identified:
 1. If the API call fails, the corresponding survey data is lost. The Business requires to avoid data loss.
 2. Some customers skipped the form. The Business requires sending a survey email to such customers.
 3. The Order Management System (OMS) uses a non-standard XML parser it did not manage to parse orders with the survey, until the survey attribute was manually removed from the xml.

How should the Architect address the issues and requirements described above?

- A. Create a custom object to store the survey data. Send to the API endpoint using a job. On success, remove the custom object. On failure, send the survey data with API from the next execution of the same job. Use the custom object to send emails for the cases when the survey was skipped.

- B. Create a custom object when the survey is required Send to the API endpoint in real-time. On success, remove the object. On failure, capture the survey data in the custom object and later reprocess with a job. Use the custom object to send emails for the cases when survey was skipped.
- C. Send the survey data to the API endpoint in real-time until the survey data is successfully captured. Instruct the OMS development team to update their XML parser, use the Order survey attribute to send emails for the cases when the survey was skipped.
- D. Create a custom session attribute when the survey is required. Send to the API endpoint in real-time. On failure, capture the survey data in the session and reprocess, use me session attribute to send emails for the cases when survey was skipped.

Answer: B

NEW QUESTION # 31

A developer has a sandbox with code to log a message during execution, and the following code:

After the code executes, the developer does not see any log file with the message in the WebDAV folder. Which two tasks does the developer need to perform to correct this issue?

Choose 2 answers

- A. Check the box for Info under Log Files.
- B. Request that the developer's account be given permission to the Log Center of the current realm.
- C. Set the logging global preference to true.
- D. Set the root log level to debug.

Answer: A,B

NEW QUESTION # 32

.....

Before clients purchase our Salesforce Certified B2C Commerce Architect test torrent they can download and try out our product freely to see if it is worthy to buy our product. You can visit the pages of our product on the website which provides the demo of our B2C-Commerce-Architect study torrent and you can see parts of the titles and the form of our software. On the pages of our B2C-Commerce-Architect study tool, you can see the version of the product, the updated time, the quantity of the questions and answers, the characteristics and merits of the product, the price of our product, the discounts to the client, the details and the guarantee of our B2C-Commerce-Architect study torrent, the methods to contact us, the evaluations of the client on our product, the related exams and other information about our Salesforce Certified B2C Commerce Architect test torrent.
