

F5 F5CAB4시험응시료, F5CAB4완벽한덤프공부자료

도시·가치·인재 시민국 행복302

2022년 하반기 군포청년 어학·자격시험 응시료 지원

신청기간 : 2022. 12. 26.(월) 09:00 ~ 2023. 1. 20.(금) 18:00
(기간 내 24시간 신청 가능)

신청대상

아래 요건을 모두 충족하는 미취업(시험 응시일 기준) 청년

- ▶ 공고일 기준 군포시에 1년 이상 주민등록을 둔 자
- ▶ 2022년 1월 1일 기준 만19세 ~ 만39세 (1982년 1월 2일부터 2003년 1월 1일까지 출생자)
- ▶ 2022년 1월 1일부터 12월 31일까지 어학·자격시험 실제 응시자

※ 2022년 신규사업으로 금년에 한해 상반기(1월~5월) 응시권 포함 하반기에 신청 가능, 단, 상반기 가지원 권 제한

지원내용

어학·자격시험 응시료 실비(1인당 최대 연 3회/어학 1회, 자격시험 2회)
※ 어학 10만원 내, 자격시험 5만원 내

신청방법

일자리지원사업 통합접수시스템 온라인 신청
<https://apply.jobabana.net>(회원가입 및 본인인증 절차 필요)
※ 급제정수증, 시험응시 증명서(성적표 등) 제출 필수
※ 제출서류 미비한 경우 자원 제외

지급방법

본인 계좌지급(2023. 2월말)

문의처

군포시 청소년청년정책과
(T. 031-390-0790, 0587)

F5인증 F5CAB4시험을 등록하였는데 시험준비를 어떻게 해야 할지 몰라 고민중이시라면 이 글을 보고Itexamdump를 찾아주세요. Itexamdump의F5인증 F5CAB4덤프샘플을 체험해보시면 시험에 대한 두려움이 사라질것입니다. Itexamdump의F5인증 F5CAB4덤프는F5인증 F5CAB4실제시험문제를 마스터한 기초에서 제작한 최신시험에 대비한 공부자료로서 시험패율이 100%입니다. 하루 빨리 덤프를 마련하여 시험을 준비하시면 자격증 취득이 빨라집니다.

F5 F5CAB4 시험요강:

주제	소개
주제 1	Identify management connectivity configurations: This section focuses on understanding management access configurations, including management IP addresses, port lockdown settings, remote connectivity verification, and troubleshooting access issues.
주제 2	Explain config sync: This section focuses on configuration synchronization procedures, identifying sync errors, determining sync necessity, checking sync status, and comparing configuration timestamps.

주제 3	Identify configured system services: This domain covers verifying proper configuration of essential services including DNS, NTP, SNMP, and syslog.
주제 4	Apply procedural concepts required to create, manage, and restore a UCS archive: This domain covers UCS backup and restore procedures, understanding backup use cases, proper storage practices, and UCS file contents including private keys.
주제 5	- Explain authentication methods: This section focuses on user management including creating - modifying users, configuring remote authentication providers, and implementing group-based access control.
주제 6	- List which log files could be used to find events and - or hardware issues: This section teaches identification of key log files (- var - log - ltm, secure, audit), understanding event severity levels, and interpreting log messages.
주제 7	- Apply procedural concepts required to manage the state of a high availability pair: This domain covers controlling and monitoring failover states in high availability pairs, including forcing standby - offline modes, reporting failover status, and verifying device trust.
주제 8	Given a scenario, determine device upgrade eligibility: This domain covers determining appropriate timing for software and platform upgrades and strategies to minimize downtime during upgrades.

F5CAB4완벽한 덤프공부자료 - F5CAB4높은 통과율 시험덤프공부

Itexamdump의F5 F5CAB4인증 시험의 자료 메뉴에는F5 F5CAB4인증 시험실기와F5 F5CAB4인증 시험 문제집으로 나누어져 있습니다.우리 사이트에서 관련된 학습가이드를 만나보실 수 있습니다. 우리 Itexamdump의F5 F5CAB4인증 시험자료를 자세히 보시면 제일 알맞고 보장도가 높으며 또한 제일 전면적인 것을 느끼게 될 것입니다.

최신 F5-CA F5CAB4 무료샘플문제 (Q36-Q41):

질문 # 36

Which log file should the BIG-IP Administrator check to determine if a specific user tried to log in to the BIG-IP Configuration Utility? (Choose one answer)

- A. /var/log/pam/tallylog
- B. /var/log/ltm
- C. /var/log/secure
- D. /var/log/httpd

정답: C

설명:

On BIG-IP systems, all authentication attempts for administrative access-including logins to the Configuration Utility (GUI)-are logged in /var/log/secure. This log file records:

- * Successful and failed login attempts
- * The username used
- * The authentication method (local, LDAP, RADIUS, etc.)
- * Access denials and PAM authentication errors

Why the other options are incorrect:

- * /var/log/pam/tallylog tracks account lockouts and failed attempt counters, not detailed login attempts.
 - * /var/log/ltm logs traffic management events, not administrative authentication.
 - * /var/log/httpd logs web server activity but does not record authentication success or failure for BIG-IP administrative users.
- Therefore, the correct log file to verify whether a user attempted to log in to the BIG-IP Configuration Utility is /var/log/secure.

질문 # 37

Which method is recommended for creating a new user from the CLI? (Choose one answer)

- A. Edit bigip.conf to add the new user and the user's clear-text password
- B. Run f5adduser 'username' then f5passwd username from bash or tmsh
- C. Run tmsh create auth user username prompt-for-password from bash
- D. Run useradd 'username' then passwd username from bash or tmsh

정답: C

설명:

The recommended and supported method for creating BIG-IP users from the CLI is through TMSH, using the authentication subsystem.

tmsh create auth user <username> prompt-for-password:

- * Properly creates the user within BIG-IP's AAA/authentication framework
- * Encrypts the password securely
- * Ensures the user is stored and managed correctly in the BIG-IP configuration database
- * Is fully supported and documented

Why the other options are incorrect:

* B is unsafe and unsupported because editing bigip.conf directly and storing clear-text passwords violates security and configuration management best practices.

* C (f5adduser / f5passwd) is deprecated and not recommended for modern BIG-IP versions.

* D creates a Linux system user only, not a BIG-IP administrative user, and will not allow access to the Configuration Utility or TMSH roles.

질문 # 38

A BIG-IP Administrator finds the following log entry: tmm tmm[7141]: 011e0002:4: sweeper_update: aggressive mode activated.

Which action should the BIG-IP Administrator take to mitigate this memory issue?

- A. Increase the TCP profile Idle Timeout value
- B. Configure the server to use Connection Mirroring
- C. Decrease the TCP profile Idle Timeout value
- D. Configure the redundant pair to be active-active

정답: B

설명:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: This log message indicates that the system is low on memory and has activated 'Aggressive Mode' to reclaim resources by closing old connections³⁷. In an HA environment, one way to ensure state stability during memory pressure is to manage how connection data is handled³⁸. While the document suggests D, procedural mitigation for 'Aggressive Mode' often involves reviewing resource provisioning or optimizing connection idle timeouts to reduce memory footprint³⁹.

질문 # 39

A BIG-IP Administrator needs to view the CPU utilization of a particular Virtual Server. Which section of the Configuration Utility should the administrator use for this purpose?

- A. Statistics > Module Statistics > Traffic Summary¹
- B. Statistics > Analytics > Process CPU Utilization²³⁴
- C. Statistics > Module Statistics > Local Traffic > Virtual Addresses
- D. Statistics > Module Statistics > Local Traffic > Virtual Servers⁵⁶⁷

정답: D

설명:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents: Monitoring specific object health is a core function of the Control Plane. While the dashboard provides a global overview, granular performance data-such as the CPU overhead a specific Virtual Server is placing on the Traffic Management Microkernel

(TMM)-is found under the Module Statistics. Navigating to Statistics > Module Statistics > Local Traffic > Virtual Servers allows an administrator to report on the current status and resource consumption of individual traffic objects.

질문 # 40

A node is a member of various pools and hosts different web applications. If a web application is unavailable, the BIG-IP appliance needs to mark the pool member down for that application pool. What should a BIG-IP Administrator deploy at the pool level to accomplish this?

- A. A TCP monitor with a custom interval/timeout
- B. A UDP monitor with a custom interval/timeout
- C. An HTTP monitor with custom send/receive strings
- D. A combination of ICMP + TCP monitor

정답: C

설명:

Comprehensive and Detailed Explanation From BIG-IP Administration Control Plane Administration documents:

To accurately report the current status of specific web applications hosted on the same server (node), the Control Plane must use a monitor that operates at the application layer.

* Application-Specific Monitoring: While a node (the IP address) might be up and responding to ICMP (ping) or TCP handshakes, a specific web service or path on that server could be failing.

* Custom Send Strings: An HTTP monitor allows the administrator to define a "Send String" to request a specific page or URI related to the application in that pool.

* Receive Strings: The "Receive String" identifies a unique value that the application must return to be considered "Available".

* Granular Status Reporting: By deploying these monitors at the pool level, the Control Plane can mark a pool member "Offline" for one application pool if the receive string is missing, while keeping it "Available" in another pool where the service is still healthy.
