Our D-PWF-OE-00 practice prep boosts varied functions to be convenient for you to master the D-PWF-OE-00 training materials and get a good preparation for the exam and they include the self-learning function, the self-assessment function, the function to stimulate the exam and the timing function. We provide 24-hours online on D-PWF-OE-00 Guide prep customer service and the long-distance professional personnel assistance to for the client. If clients have any problems about our study materials and we will solve the client's D-PWF-OE-00 problems as quickly as we can.

The exam outline will be changed according to the new policy every year, and the D-PWF-OE-00 questions torrent and other teaching software, after the new exam outline, we will change according to the syllabus and the latest developments in theory and practice and revision of the corresponding changes, highly agree with outline. After you choose our study materials, you can master the examination point from the D-PWF-OE-00 Guide question. Then, you will have enough confidence to pass your exam. As for the safe environment and effective product, why don't you have a try for our D-PWF-OE-00 question torrent, never let you down!

## Latest D-PWF-OE-00 Dumps Sheet & Reliable D-PWF-OE-00 Study Guide

The D-PWF-OE-00 study questions included in the different versions of the PDF, Software and APP online which are all complete and cover up the entire syllabus of the exam. And every detail of these three versions are perfect for you to practice and prepare for the exam. If you want to have a try before you pay for the D-PWF-OE-00 Exam Braindumps, you can free download the demos which contain a small part of questions from the D-PWF-OE-00 practice materials. And you can test the functions as well.

## EMC Dell PowerFlex Operate Exam Sample Questions (Q16-Q21):

### NEW QUESTION # 16

A Fault Set in PowerFlex requires a minimum of 3 nodes to ensure fault tolerance. True or False?

- A. False
- B. True

**Answer: B**

Explanation:

To utilize Fault Sets effectively for their intended purpose (rack-level fault tolerance), the cluster architecture imposes specific minimums.

PowerFlex relies on distributing data copies (Mesh Mirroring). The standard redundancy scheme creates 2 copies of data. To ensure that data remains available even if one entire Fault Set (e.g., an entire rack) fails, the system must be able to distribute the mirrors across different Fault Sets. Consequently, you generally need a minimum of 3 Fault Sets (System requires 3+ Fault Sets to support 2-copy layouts effectively). Since a Fault Set must contain at least one node, the cluster requires a minimum of 3 nodes to support a Fault Set configuration.

#### NEW QUESTION # 17

What are the advantages of using PowerFlex Manager for upgrades? (Choose two).

- A. Scheduled upgrades to minimize downtime
- B. Automated rollback in case of failure
- C. Real-time performance monitoring during upgrades
- D. Multi-cluster upgrade capabilities

**Answer: A,D**

Explanation:

PowerFlex Manager (PFxM) serves as the automation engine for Lifecycle Management (LCM).

\* Scheduled upgrades to minimize downtime (Option B): PFXM allows administrators to schedule upgrades during maintenance windows. More importantly, it orchestrates the upgrade in a non-disruptive manner (rolling upgrades), ensuring that workloads (VMs, Databases) remain online throughout the process. It handles the complex logic of placing nodes in maintenance mode, waiting for data sync, and rebooting.

\* Multi-cluster upgrade capabilities (Option C): PFXM acts as a "single pane of glass" that can manage multiple PowerFlex clusters (services) across the data center. This allows for centralized version control and the ability to push compliant software (RCMs) to multiple distinct clusters from one interface.

Note: While Real-time performance monitoring (D) is a feature of PFXM, it is a daily operational benefit, not a specific advantage of the upgrade process itself.

#### NEW QUESTION # 18

Which software components are essential for PowerFlex operations? (Choose two).

- A. PowerProtect Data Manager
- B. Meta Data Manager (MDM)
- C. Storage Data Server (SDS)
- D. VMware Horizon

**Answer: B,C**

Explanation:

This question asks for the core components that make up the PowerFlex software-defined storage system.

\* Meta Data Manager (MDM) (Option B): The MDM is the control plane. It manages the mapping of data, monitors the state of the system, controls rebuilds/rebalances, and acts as the central point for configuration. Without the MDM, the cluster cannot function or change state.

\* Storage Data Server (SDS) (Option A): The SDS is the data plane. It is the software installed on every node that contributes storage. It abstracts the local drives, performs I/O operations, and communicates with other SDSs to replicate data.

Incorrect Options: VMware Horizon (C) is VDI software that uses PowerFlex, but is not part of it.

PowerProtect (D) is backup software.

#### NEW QUESTION # 19

Snapshots in PowerFlex are created in a writable state by default. True. False.

- A. False
- B. True

**Answer: B**

Explanation:

In many legacy storage arrays, a snapshot is a read-only "view" of the data, and if you want to mount it and write to it (for testing or database recovery), you must create a "Clone" or "linked clone" from that snapshot.

PowerFlex differs here. A PowerFlex snapshot is technically just another volume. It is fully writable immediately upon creation. It uses a redirect-on-write mechanism. If a host mounts a snapshot and writes to it, the new data is written to new blocks, diverging from the source volume. This makes PowerFlex snapshots extremely agile for DevOps and CI/CD workflows where writable copies are needed instantly.

#### **NEW QUESTION # 20**

Post-installation tasks in PowerFlex include configuring protection domains and fault sets. True. False.

- A. False
- **B. True**

**Answer: B**

Explanation:

\* True: After the initial software deployment (Day 0), the system consists of installed MDM/SDS software but no logical storage structure.

\* Day 1 Tasks: The administrator's first tasks are to:

\* Create a Protection Domain (grouping the SDS nodes).

\* (Optional but recommended) Configure Fault Sets within that Protection Domain for rack awareness.

\* Create Storage Pools within the PD.

\* Add Devices (Drives) to the Pool.

Only after these "post-installation" tasks are complete can volumes be created and mapped to hosts.
