SAP C-S4CPB-2508 Valid Exam Vce Free | C-S4CPB-2508 New Dumps Free

What is more, some after-sales services behave indifferently towards exam candidates who eager to get success, our C-S4CPB-2508 practice materials are on the opposite of it. So just set out undeterred with our C-S4CPB-2508 practice materials, These C-S4CPB-2508 practice materials win honor for our company, and we treat it as our utmost privilege to help you achieve your goal. Our C-S4CPB-2508 practice materials are made by our responsible company which means you can gain many other benefits as well.

SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q48-Q53):

NEW QUESTION # 48

Where is the initial list of known integrations documented?

- A. In SAP Cloud ALM
- B. In the Fit-to-Standard Workshops
- C. In the Business Driven Configuration Questionnaire
- D. In the Digital Discovery Assessment

Answer: C

Explanation:

The initial list of known integrations is documented in the Business Driven Configuration Questionnaire (BDCQ). The BDCQ is a tool that helps you to capture the business requirements and scope of your SAP S/4HANA Cloud Public Edition project. It contains a series of questions that cover different aspects of your business processes, such as organizational structure, master data, configuration settings, and integration scenarios. The BDCQ also provides guidance on the best practices and recommendations for your project¹².

One of the sections in the BDCQ is the Integration section, where you can document the initial list of known integrations that are relevant for your project. The Integration section contains questions about the integration scenarios that you want to enable, such as cross-system process integration, data replication, data migration, and third-party integration. The Integration section also provides information on the available integration options, such as SAP Cloud Platform Integration, SAP API Business Hub, and SAP Cloud ALM¹³.

The initial list of known integrations is important for your project, as it helps you to identify the integration requirements, dependencies, and risks that need to be considered in the project planning and execution. The initial list of known integrations also helps you to select the appropriate integration tools and methods, and to align the integration scope with the SAP S/4HANA Cloud Public Edition roadmap and release cycles¹³.

Therefore, the correct answer is A, as the initial list of known integrations is documented in the BDCQ. References = 1 Business Driven Configuration Questionnaire - SAP Help Portal 2 Business Driven Configuration Questionnaire - SAP Community 3 SAP S/4HANA Cloud Public Edition Integration - SAP Help Portal

NEW QUESTION # 49

How can you migrate data to SAP S/4HANA Cloud Public Edition? Note: There are 2 correct answers to this question.

- A. With Core Data Services
- B. With the zero downtime service
- C. With a separate SAP HANA database
- D. With XML or CSV templates

Answer: C,D

Explanation:

You can migrate data to SAP S/4HANA Cloud Public Edition using the SAP S/4HANA Migration Cockpit, a tool that provides multiple methods of migrating data from legacy systems, SAP or non-SAP, to the target system¹. The SAP S/4HANA Migration Cockpit supports the following migration methods²:

* With XML or CSV templates: You can use predefined templates in XML or CSV format to fill in your source data and upload them to the staging tables in the SAP S/4HANA Cloud system. The templates are based on the predefined migration objects that cover the most common business data, such as master data, transaction data, and configuration data. You can download the templates from the SAP S/4HANA Migration Cockpit or from the SAP Best Practices Explorer.

* With a separate SAP HANA database: You can use a separate SAP HANA database as a staging area to store your source data and transfer it to the SAP S/4HANA Cloud system. You can use any tool or method to extract your source data from your legacy system and load it to the SAP HANA database.

You can also use the predefined migration objects or create your own custom objects using the migration object modeler.

* Directly from an SAP ERP system: You can connect your SAP ERP system to the SAP S/4HANA Cloud system and transfer your source data directly without using a staging area. You can use the predefined migration objects or create your own custom objects using the migration object modeler.

This method requires the installation of the SAP S/4HANA Migration Cockpit add-on in your SAP ERP system.

The other two options, with the zero downtime service and with Core Data Services, are not valid methods of migrating data to SAP S/4HANA Cloud Public Edition. The zero downtime service is a tool that enables you to upgrade your SAP S/4HANA system with minimal downtime, but it is not used for data migration³. Core Data Services (CDS) are a set of domain-specific languages and services for defining and consuming semantically rich data models, but they are not used for data migration⁴. References = Migrating Data to SAP S/4HANA Cloud, Public Edition, Migrating Data with the SAP S/4HANA Migration Cockpit, Zero Downtime Service for SAP S/4HANA, Core Data Services (CDS)

NEW QUESTION # 50

How does an implementation consultant support customer experts during Fit-to-Standard workshops? Note: There are 2 correct answers to this question.

- A. Highlight areas that require configuration or customization decisions.
- B. Demonstrate SAP Best Practice business processes in the starter system.
- C. Conduct end-user training on active scope items.
- D. Determine set up instructions for customer-driven integrations.

Answer: A,B

NEW QUESTION # 51

Which technologies should you use to integrate SAP S/4HANA Cloud Public Edition with another SAP public cloud solution? Note: There are 2 correct answers to this question.

- A. SAP Integration Suite
- B. SAP Process Orchestration
- C. SAP Cloud Connector
- D. Predelivered APIS

Answer: A,D

NEW QUESTION # 52

Which of the following actions does the lead configuration expert carry out during the content deployment phase in the SAP S/4HANA Cloud starter system? Note: There are 3 correct answers to this question.

- A. Define the scope
- B. Confirm primary logistics settings
- C. Create two projects
- D. Confirm primary finance settings
- E. Confirm primary HCM settings

Answer: A,B,C

Explanation:

For implementing SAP S/4HANA Cloud Public Edition for a customer, the following systems are commonly used:

* Sandbox system: This system is used in the very early stages of the project for exploration and trying out different configurations without affecting the development or production environments. It's a safe space for experimentation.

* Development system: This system is where the initial setup and customizations are made. Configuration changes, custom development, and extensions are carried out here before being moved to the test system for further testing.

* Test system: After configurations and developments are done in the development system, they are transported to the test system. This environment is used for rigorous testing to ensure that everything works as expected and to identify any issues before moving to the production environment.

These systems play crucial roles in the implementation process, allowing for a structured and phased approach to setting up, customizing, testing, and finally deploying SAP S/4HANA Cloud Public Edition.

NEW QUESTION # 53

.....

Our C-S4CPB-2508 real quiz boosts 3 versions: the PDF, Software and APP online. Though the content of these three versions is the same, but the displays of them are with varied functions to make you learn comprehensively and efficiently. The learning of our C-S4CPB-2508 Study Materials costs you little time and energy and we update them frequently. To understand our C-S4CPB-2508 learning questions in detail please look at the introduction of our product on the website pages.
