

Microsoft GH-100 Latest Braindumps Free & GH-100 Training Materials

P.S. Free 2026 Microsoft GH-100 dumps are available on Google Drive shared by RealValidExam: <https://drive.google.com/open?id=1F4gh47EB1JtzcPPNWVCfB-u3YWAs8kYu>

Therefore, you must prepare as per the changes of the Microsoft GH-100 real test. For your assistance, RealValidExam offers free real Microsoft GH-100 dumps updates if Microsoft Certification Exams changes the GH-100 examination content within 365 days of your purchase. These free GH-100 dumps updates will prevent you from mental stress, wasting time, and losing money.

Microsoft GH-100 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Manage GitHub Packages: This section of the exam measures skills of GitHub Enterprise Administrators and focuses on managing GitHub Packages, their use in workflows, and how they differ from releases. It involves accessing, writing, and sharing packages across teams while ensuring integration into CI CD pipelines.
Topic 2	<ul style="list-style-type: none"> Manage GitHub Actions: This section of the exam measures skills of DevOps Engineers and emphasizes managing workflows, reusable actions, and distribution strategies within the enterprise. It explains configuring organization-level policies, managing self-hosted and GitHub-hosted runners, controlling access through IP allow lists, handling encrypted secrets, and integrating third-party vaults for workflow security.
Topic 3	<ul style="list-style-type: none"> Describe how GitHub is deployed, distributed, and licensed: This section of the exam measures skills of GitHub Enterprise Administrators and highlights the deployment models of GitHub Enterprise Server, Enterprise Cloud, and GitHub AE. It covers licensing structures, billing for seat licenses and metered services, support options, and monitoring license usage across users and machine accounts.

Topic 4	<ul style="list-style-type: none"> • Support GitHub Enterprise for users and key stakeholders: This section of the exam measures skills of GitHub Enterprise Administrators and covers supporting users, identifying issues that can be resolved internally versus those needing GitHub Support, and generating support bundles and diagnostics. It also involves recognizing underutilized features, managing workflows like branching and pull requests, understanding CI • CD strategies, recommending tooling, and extending capabilities through APIs or Marketplace apps.
Topic 5	<ul style="list-style-type: none"> • Enable secure software development and ensure compliance: This section of the exam measures skills of GitHub Enterprise Administrators and deals with applying GitHub's security and compliance capabilities. It covers policies, auditing, scrubbing sensitive data, secret scanning, code scanning with CodeQL, dependency management with Dependabot, and implementing security response plans. It also explores authentication tokens, app security policies, and enterprise managed users.
Topic 6	<ul style="list-style-type: none"> • Manage user identities and GitHub authentication: This section of the exam measures skills of DevOps Engineers and focuses on managing authentication and identity across organizations using SAML SSO, SCIM, and team synchronization. Candidates need to understand identity providers, user membership implications, authorization models, and enforcing security measures such as two-factor authentication.

GH-100 Training Materials | Reliable GH-100 Test Preparation

As is known to all, practice makes perfect. This proverb also can be replied into the exam. We have the GH-100 Study Materials with good reputation in the market. The GH-100 exam dumps not only contains the quality, but also have the quantity, therefore it will meet your needs. Just think that you just need to practice it for some time, a certificate will be obtained by your own efforts, it will be a quite delightful thing. So act now, you will be very happy to see it come true.

Microsoft GitHub Administration Sample Questions (Q41-Q46):

NEW QUESTION # 41

Which feature is unique to self-hosted runners?

- A. Automatic updates to the operating system
- **B. Execute scripts before and after a job**
- C. GPU support
- D. Dynamic scaling

Answer: B

Explanation:

Self-hosted runners support custom pre- and post-job scripts via runner hooks, letting you run arbitrary scripts before a job starts and after it finishes - capabilities not available on GitHub-hosted runners.

NEW QUESTION # 42

What makes GitHub Apps a more secure choice for automation over OAuth Apps?

- A. GitHub Apps always require two-factor authentication.
- B. GitHub Apps are limited to read-only access and cannot write to repositories.
- **C. GitHub Apps authenticate as an app with fine-grained permissions, not as a user.**
- D. GitHub Apps can only be installed by organization owners.

Answer: C

Explanation:

GitHub Apps authenticate as themselves with fine-grained, installation-scoped permissions and short-lived tokens - rather than inheriting a user's broad OAuth scopes - minimizing blast radius and aligning with least-privilege principles.

NEW QUESTION # 43

What is a key characteristic of GitHub Enterprise Server (GHES) compared to GitHub Enterprise Cloud (GHEC)?

- A. GHES is hosted by GitHub and offers automatic scaling, while GHEC requires self-hosting.
- B. GHES users cannot integrate with external identity providers for authentication.
- C. GHEC offers data residency options in regions that GHES does not support.
- **D. GHES allows enterprises to have complete control over their hosting environment, including data storage and network security policies.**

Answer: D

Explanation:

GitHub Enterprise Server is a self-hosted product you install and manage on your own infrastructure - giving you full control over data storage, network security policies, and the underlying environment.

NEW QUESTION # 44

Why is a GitHub App preferred over a PAT for machine authentication?

- **A. GitHub Apps have time-limited installation tokens with scoped access**
- B. PATs support fewer GitHub APIs than Apps
- C. GitHub Apps are required to pass SAML assertions
- D. PATs cannot be used in GitHub Actions

Answer: A

Explanation:

GitHub Apps issue short-lived installation tokens that you scope to only the permissions and repositories your automation needs, reducing blast radius and automatically rotating credentials.

NEW QUESTION # 45

Which of the following are valid ways to pass data to a reusable workflow in a separate repository?

- A. Use environment variables to pass data directly to the reusable workflow.
- **B. Define inputs in the reusable workflow and pass values from the calling workflow.**
- C. Define the secrets in the reusable workflow's repository and reference the secret using the 'secrets' context.
- **D. Define the secrets in the caller repository and call the reusable workflow using the 'secrets' keyword.**

Answer: B,D

Explanation:

You declare `namedinputs` in the reusable workflow's `on.workflow_call` block and then pass values from the caller using `withkeyword`, allowing the called workflow to consume those parameters.

You define required secrets in the caller repository and supply them to the reusable workflow via `thesecretskeyword` in the `workflow-call` step, ensuring sensitive values are securely passed.

NEW QUESTION # 46

.....

As we enter into such a competitive world, the hardest part of standing out from the crowd is that your skills are recognized then you will fit into the large and diverse workforce. The GH-100 certification is the best proof of your ability. However, it's not easy for those work officers who has less free time to prepare such an GH-100 Exam. Here comes GH-100 exam materials which contain all of the valid GH-100 study questions. You will never worry about the GH-100 exam.
