## 2026 Exam Deep-Security-Professional Cram Review | Reliable Deep-Security-Professional Study Reference: Trend Micro Certified Professional for Deep Security

Our Deep-Security-Professional practice questions enjoy great popularity in this line. We provide our Deep-Security-Professional exam braindumps on the superior quality and being confident that they will help you expand your horizon of knowledge of the exam. They are time-tested Deep-Security-Professional Learning Materials, so they are classic. As well as our after-sales services. And we can always give you the most professional services on our Deep-Security-Professional training guide.

### Trend Micro Certified Professional for Deep Security Sample Questions (Q12-Q17):

#### NEW QUESTION # 12

The Intrusion Prevention Protection Module is enabled, its Behavior is set to Prevent and rules are assigned.

When viewing the events, you notice that one of Intrusion Prevention rules is being triggered and an event is being logged but the traffic is not being blocked. What is a possible reason for this?

- A. The network engine is running in Inline mode. In Inline mode, Deep Security provides no protection beyond a record of events.

- **B. The default Prevention Behavior in this particular rule may be set to Detect. This logs the triggering of the rule, but does not actually enforce the block.**
- C. The Deep Security Agent is experiencing a system problem and is not processing packets since the "Network Engine System Failure" mode is set to "Fail Open".
- D. The Intrusion Prevention rule is being triggered as a result of the packet sanity check failing and the packet is being allowed to pass.

**Answer: B**

Explanation:

If the Intrusion Prevention rule's behavior is set to Detect rather than Prevent, it will log events when the rule is triggered but will not block the associated traffic. This can happen even if the module's overall setting is Prevent, because individual rules can have their own behavior configuration.

### NEW QUESTION # 13

Which Protection Modules can make use of a locally installed Smart Protection Server?

- **A. The Anti-Malware and Web Reputation Protection Modules can make use of the locally installed Smart Protection Server.**
- B. The Anti-Malware, Web Reputation and Intrusion Prevention Protection Modules can make use of the locally installed Smart Protection Server.
- C. All Protection Modules can make use of the locally installed Smart Protection Server
- D. Anti-Malware is the only Protection Modules that can use the locally installed Smart Protection Server.

**Answer: A**

Explanation:

Only the Anti-Malware and Web Reputation modules are designed to interact with a Smart Protection Server for real-time threat lookups. The other modules do not leverage the Smart Protection Server.

From the official documentation:

"Smart Protection Server provides global threat intelligence lookups to the Anti-Malware and Web Reputation modules. Other modules do not use Smart Protection Server." References:

Trend Micro Deep Security Administrator's Guide: Smart Protection Server Integration

### NEW QUESTION # 14

Which of the following statements is true regarding software inventories used as part of the Application Control Protection Module?

- **A. An administrator can view the list of allowed software in the inventory from the Details tab for each individual Computer.**
- B. Disable the Application Control Protection Module when installing software upgrades, otherwise, the new software will be prevented from installing.
- C. When an administrator allows software that would be otherwise blocked by the Enforcement Mode, it isn't added to the inventory of approved software. Instead, it is added to that computer's whitelist.
- D. An administrator can share the inventory of allowed software with other computers protected by Deep Security Agents, by copying the inventory database file (ac.db) from the source computer.

**Answer: A**

Explanation:

The software inventory for Application Control is visible in the Deep Security Manager console under the Details tab for each protected computer. This inventory lists all approved and detected software components for that agent.

From the official documentation:

"Administrators can view and manage the Application Control inventory for each computer from the Details tab in the Deep Security Manager console. This inventory lists all allowed, blocked, and detected software." Option A is incorrect: You do not need to disable the module for upgrades; use Maintenance Mode or update rules.

Option C is incorrect: Inventory is not shared by copying database files.

Option D is incorrect: Allowed software is added to the inventory.

### NEW QUESTION # 15

Which of the following statements is true regarding Deep Security Relays?

- A. Deep Security Relays are able to process Deep Security Agent requests during updates.
- B. Deep Security Agents promoted to Deep Security Relays no longer provide the security capabilities enabled by the Protection Modules.
- C. Both 32-bit and 64-bit Deep Security Agents can be promoted to a Deep Security Relay.
- **D. Deep Security Agents communicate with Deep Security Relays to obtain security up-dates.**

**Answer: D**

### NEW QUESTION # 16

How can you prevent a file from being scanned for malware?

- A. Edit the "Scan Exclusions" section of the dsa.properties configuration file on the Deep Security Agent computer to include the file name. Save the configuration file and restart the Deep Security Agent service.
- B. Enable "File Types scanned by IntelliScan" in the Malware Scan Configuration properties in the Deep Security Manager Web console. Click "Scan All Except" and type the filename to exclude from the scan.
- **C. Add the file to the Exclusions list in the Malware Scan Configuration.**
- D. Add the file to the Exclusions list in the "Allowed Spyware/Grayware Configuration".

**Answer: C**

Explanation:

To exclude files from malware scans, add them to the Exclusions list in the Malware Scan Configuration via the Deep Security Manager Web console. This is the official and recommended method.

From the official documentation:

"Files or folders added to the Exclusions list in the Malware Scan Configuration will not be scanned for malware." References:
