BONUS!!! Download part of DumpsReview Professional-Data-Engineer dumps for free: [https://drive.google.com/open?id=1txLeV\\_DqCUu1qawIXZhkPvubgWrukKA3](https://drive.google.com/open?id=1txLeV_DqCUu1qawIXZhkPvubgWrukKA3)

According to different kinds of questionnaires based on study condition among different age groups, we have drawn a conclusion that the majority learners have the same problems to a large extent, that is low-efficiency, low-productivity, and lack of plan and periodicity. As a consequence of these problem, our Professional-Data-Engineer test prep is totally designed for these study groups to improve their capability and efficiency when preparing for Professional-Data-Engineer Exams, thus inspiring them obtain the targeted Professional-Data-Engineer certificate successfully. Our Professional-Data-Engineer question torrent can play a very important part in helping you achieve your dream.

Google Professional-Data-Engineer certification exam is an excellent way for data engineering professionals to demonstrate their expertise in this field. Professional-Data-Engineer exam covers a wide range of topics and technologies, and it is designed to test the candidate's ability to design and implement solutions that meet the needs of real-world scenarios. If you are a data engineering professional looking to advance your career, the Google Professional-Data-Engineer certification exam is definitely worth considering.

Google Professional-Data-Engineer Certification is an excellent way for data processing professionals to demonstrate their knowledge and skills in designing and building data processing systems on Google Cloud Platform. Google Certified Professional Data Engineer Exam certification can help individuals advance their careers and open up new opportunities in the field of data engineering.

# Ace Your Exam Preparation with DumpsReview Google Professional-Data-Engineer Practice Questions

Our Professional-Data-Engineer study materials can help you pass test faster. You can take advantage of the certification. Many people improve their ability to perform more efficiently in their daily work with the help of our Professional-Data-Engineer exam questions and you can be as good as they are. The moment you choose to go with our Professional-Data-Engineer Study Materials, your dream will be more clearly presented to you. Next, through my introduction, I hope you can have a deeper understanding of our Professional-Data-Engineer learning quiz. We really hope that our Professional-Data-Engineer study materials will give you the help to pass the exam.

## How to book Google Professional Data Engineer Exams

The registration for the Google Professional Data Engineer Exam follows the steps given below.

- Step1: Visit the Google Cloud Webassessor Website
- Step3: Search for the exam name Google Professional Data Engineer
- Step4: Take the date of the exam, choose exam center and make further payment using payment method like credit/debit etc.
- Step2: Sign in or sign up to your Google Cloud Webassessor account

## Google Certified Professional Data Engineer Exam Sample Questions (Q22-Q27):

### NEW QUESTION # 22

You issue a new batch job to Dataflow. The job starts successfully, processes a few elements, and then suddenly fails and shuts down. You navigate to the Dataflow monitoring interface where you find errors related to a particular DoFn in your pipeline. What is the most likely cause of the errors?

- A. Insufficient permissions
- B. Job validation
- C. Graph or pipeline construction
- **D. Exceptions in worker code**

**Answer: D**

Explanation:

[https://cloud.google.com/dataflow/docs/guides/troubleshooting-your-pipeline#detect\\_an\\_exception\\_in\\_worker\\_code](https://cloud.google.com/dataflow/docs/guides/troubleshooting-your-pipeline#detect_an_exception_in_worker_code) While your job is running, you might encounter errors or exceptions in your worker code. These errors generally mean that the DoFns in your pipeline code have generated unhandled exceptions, which result in failed tasks in your Dataflow job. Exceptions in user code (for example, your DoFn instances) are reported in the Dataflow monitoring interface.

### NEW QUESTION # 23

Data Analysts in your company have the Cloud IAM Owner role assigned to them in their projects to allow them to work with multiple GCP products in their projects. Your organization requires that all BigQuery data access logs be retained for 6 months. You need to ensure that only audit personnel in your company can access the data access logs for all projects. What should you do?

- A. Export the data access logs via a project-level export sink to a Cloud Storage bucket in a newly created projects for audit logs. Restrict access to the project with the exported logs.
- B. Export the data access logs via a project-level export sink to a Cloud Storage bucket in the Data Analysts' projects. Restrict access to the Cloud Storage bucket.
- **C. Export the data access logs via an aggregated export sink to a Cloud Storage bucket in a newly created project for audit logs. Restrict access to the project that contains the exported logs.**
- D. Enable data access logs in each Data Analyst's project. Restrict access to Stackdriver Logging via Cloud IAM roles.

**Answer: C**

### NEW QUESTION # 24

Your company uses a proprietary system to send inventory data every 6 hours to a data ingestion service in the cloud. Transmitted

data includes a payload of several fields and the timestamp of the transmission. If there are any concerns about a transmission, the system re-transmits the data. How should you deduplicate the data most efficiently?

- A. Maintain a database table to store the hash value and other metadata for each data entry.
- B. Assign global unique identifiers (GUID) to each data entry.
- C. Store each data entry as the primary key in a separate database and apply an index.
- D. Compute the hash value of each data entry, and compare it with all historical data.

**Answer: A**

Explanation:

Using Hash values we can remove duplicate values from a database. Hash values will be same for duplicate data and thus can be easily rejected.

#### NEW QUESTION # 25

Suppose you have a table that includes a nested column called "city" inside a column called "person", but when you try to submit the following query in BigQuery, it gives you an error.

```
SELECT person FROM `project1.example.table1` WHERE city = "London"
```

How would you correct the error?

- A. Add ", UNNEST(city)" before the WHERE clause.
- B. Change "person" to "city.person".
- C. Add ", UNNEST(person)" before the WHERE clause.
- D. Change "person" to "person.city".

**Answer: C**

Explanation:

To access the person.city column, you need to "UNNEST(person)" and JOIN it to table1 using a comma.

[https://cloud.google.com/bigquery/docs/reference/standard-sql/migrating-from-legacy-sql#nested\\_repeated\\_resu](https://cloud.google.com/bigquery/docs/reference/standard-sql/migrating-from-legacy-sql#nested_repeated_resu)

#### NEW QUESTION # 26

When a Cloud Bigtable node fails, \_\_\_\_\_ is lost.

- A. the last transaction
- B. all data
- C. no data
- D. the time dimension

**Answer: C**

Explanation:

A Cloud Bigtable table is sharded into blocks of contiguous rows, called tablets, to help balance the workload of queries. Tablets are stored on Colossus, Google's file system, in SSTable format. Each tablet is associated with a specific Cloud Bigtable node. Data is never stored in Cloud Bigtable nodes themselves; each node has pointers to a set of tablets that are stored on Colossus. As a result:

Rebalancing tablets from one node to another is very fast, because the actual data is not copied. Cloud Bigtable simply updates the pointers for each node.

Recovery from the failure of a Cloud Bigtable node is very fast, because only metadata needs to be migrated to the replacement node.

When a Cloud Bigtable node fails, no data is lost
