## 効率的な1Y0-204学習範囲 & 資格試験におけるリーダーオファー & 人気のある1Y0-204資格勉強

Citrixの1Y0-204の試験の資料やほかのトレーニング資料を提供しているサイトがたくさんありますが、Citrixの1Y0-204の認証試験の高品質の資料を提供しているユニークなサイトはShikenPASSです。ShikenPASSのガイダンスとヘルプを通して、初めにCitrixの1Y0-204「Citrix Virtual Apps and Desktops 7 Administration」の認証を受けるあなたは、気楽に試験に合格することができます。ShikenPASSが提供した問題と解答は現代の活力がみなぎる情報技術専門家が豊富な知識と実践経験を活かして研究した成果で、あなたが将来IT分野でより高いレベルに達することに助けを差し上げます。

## Citrix Virtual Apps and Desktops 7 Administration 認定 1Y0-204 試験問題 (Q178-Q183):

### 質問 # 178

Scenario: A Citrix Administrator has given permissions to team members to access their own admin partition, so they can add resources for different departments and manage them without making changes to the default Citrix ADC partition and configuration. One team member was trying to use the command-line interface to troubleshoot an authentication issue and cloud NOT use `aaad.debug`. However, the team member has full permissions on the admin partition. What can be the cause of this issue?

- A. The team member needs to troubleshoot the issue from the GUI.
- B. The team member does NOT have permission to use the CLI.
- C. The team member does NOT have Shell access by design.
- D. The team member is NOT using the CLI correctly.

正解: C

解説:

Team members who have access to their own admin partitions do NOT have Shell access by design. Shell access is only available for the default partition. Therefore, the team member cannot use `aaad.debug` or any other Shell commands from the CLI.

#### 質問 # 179

What are three daily steps a Citrix Administrator should take to monitor a Citrix Virtual Apps and Desktops infrastructure? (Choose three.)

- A. Check for warnings or alerts with Citrix Director.
- B. Check virtual machine power states.
- C. Perform a capacity assessment.
- D. Test environment access.
- E. Review available Citrix software upgrades.

正解: A、B、D

解説:

Test environment access.

Verifying that users can log on and launch applications or desktops ensures early detection of authentication or entitlement issues.

Check for warnings or alerts with Citrix Director.

Daily review of Director's dashboard and alerts helps catch resource constraints, service failures, or licensing issues before they impact users.

Check virtual machine power states.

Ensuring that catalog machines are powered on or off as expected (especially for scheduled or demand-based workloads) confirms Autoscale or scheduling configurations are functioning correctly.

#### 質問 # 180

Scenario: A Citrix Administrator needs to ensure that a user request is redirected to the next available data center in order to ensure the best user experience based upon location.

Below are the Global Server Load Balancing (GSLB) vserver settings:

```
sh gslb vserver gslb.outscale.cloud
gslb.outscale.cloud-SSL    State: UP
DNS Record Type: A
Last state changed was at Tue May 16 23:47:54 2017
Time since last state change: 16 days, 16:13:23.390
Configured Method: RTT
BackupMethod: LEASTCONNECTION
No. of Bound Services: 2(Total)  1(Active)
Persistence: NONE
Disable Primary Vserver on Down: DISABLED
Site Persistence: ConnectionProxv
To which setting should the administrator change the configured method?
```

- A. LeastConnection
- B. LeastBandwidth
- C. RoundRobin
- D. StaticProximity

正解: A

解説:

Explanation

According to the Citrix Virtual Apps and Desktops 7 Deployment and Administration (CWS-215) course, the LeastConnection method is used to redirect user requests to the data center with the fewest active connections.

This can help balance the load across different data centers and improve the user experience. The other methods are not suitable for this scenario because they do not consider the number of active connections or the location of the user

### 質問 # 181

Which three functionalities will NetScaler Gateway provide to allow access to internal resources on behalf of external users? (Choose three.)

- A. Allow secured external connections from Citrix Workspace app (Reverse Web Proxy)
- B. Enumerate resources
- C. Allow secured access to internal hosted applications (HDX Proxy)
- D. Authenticate Users
- E. Aggregate resources

正解: A、C、D

解説:

Authenticate Users

NetScaler Gateway performs user authentication (LDAP, RADIUS, etc.) at the perimeter before granting any access.

Allow secured external connections from Citrix Workspace app (Reverse Web Proxy) It acts as a reverse web proxy, terminating and inspecting incoming SSL/TLS connections from Citrix Workspace app.

Allow secured access to internal hosted applications (HDX Proxy)

It proxies HDX traffic over TLS, securely tunneling ICA sessions to internal XenApp/XenDesktop resources.

### 質問 # 182

A Citrix Administrator has deployed a non-domain-joined StoreFront server.

Which two options should the administrator be aware of with this deployment? (Choose two.)

- A. Server groups are NOT supported.
- B. Authentication occurs at the Citrix ADC.
- C. Authentication occurs at the Domain Controller.
- D. Two-factor authentication is NOT supported.
- E. Authentication occurs at the Delivery Controller.
- F. Server groups are supported.

正解: A、E

解説:

According to the Plan your StoreFront deployment document, for single server deployments you can install StoreFront on a non-domain-joined server but certain functionality will be unavailable; otherwise, StoreFront servers must reside either within the Active Directory domain containing your users' accounts or within a domain that has a trust relationship with the user accounts domain unless you enable delegation of authentication to the Citrix Virtual Apps and Desktops sites or farms. All the StoreFront servers in a group must reside within the same domain. Therefore, server groups are not supported for non-domain-joined StoreFront servers (option D). Also, according to the User authentication document, when you configure a store, you specify the type of authentication service to use. By default, users are authenticated on StoreFront. Alternatively, you can delegate authentication to Citrix ADC or to the Delivery Controllers (option E). Authentication does not occur at the Domain Controller (option A) or at the Citrix ADC (option C) by default. Two-factor authentication is supported for non-domain-joined StoreFront servers (option B) as long as the authentication is delegated to Citrix ADC or Delivery Controllers.
