If you cannot fully believe our 212-89 exam prep, you can refer to the real comments from our customers on our official website before making a decision. There are some real feelings after they have bought our study materials. Almost all of our customers have highly praised our 212-89 exam guide because they have successfully obtained the certificate. Generally, they are very satisfied with our 212-89 Exam Torrent. Also, some people will write good review guidance for reference. Maybe it is useful for your preparation of the 212-89 exam. In addition, you also can think carefully which kind of study materials suit you best. If someone leaves their phone number or email address in the comments area, you can contact them directly to get some useful suggestions.

EC-Council, the organization behind the ECIH v2 certification program, is a leading provider of information security training and certification programs. The organization has trained and certified over 200,000 professionals in more than 145 countries worldwide. EC-Council's mission is to build a safer and more secure cyber world by providing top-quality educational programs and certifications that help organizations protect their critical information assets from cyber threats. The ECIH v2 certification program is one of the many certification programs offered by EC-Council to help IT professionals enhance their skills and knowledge in the field of cybersecurity.

EC-COUNCIL 212-89 Exam Dumps - Pass Exam With Best Scores [2026]

Why you should trust Free4Dump? By trusting Free4Dump, you are reducing your chances of failure. In fact, we guarantee that you

will pass the 212-89 certification exam on your very first try. If we fail to deliver this promise, we will give your money back! This promise has been enjoyed by over 90,000 takes whose trusted Free4Dump. Aside from providing you with the most reliable dumps for 212-89, we also offer our friendly customer support staff. They will be with you every step of the way.

EC-Council Certified Incident Handler (ECIH v2) is an industry recognized certification that validates an individual's expertise in detecting, responding and resolving computer security incidents. 212-89 Exam is designed to assess the candidate's knowledge of the incident handling process, including the identification, containment, eradication, and recovery of a security breach. The ECIH certification is an excellent way for IT professionals to demonstrate their knowledge and skills in the area of incident handling.

EC-COUNCIL EC Council Certified Incident Handler (ECIH v3) Sample Questions (Q221-Q226):

NEW QUESTION # 221
Darwin is an attacker within an organization and is performing network sniffing by running his system in promiscuous mode. He is capturing and viewing all the network packets transmitted within the organization. Edwin is an incident handler in the same organization.
In the above situation, which of the following Nmap commands Edwin must use to detect Darwin's system that is running in promiscuous mode?

- A. nmap --script host map
- B. nmap --script=sniffer-detect [Target IP Address/Range of IP addresses]
- C. nmap -sU -p 500
- D. nmap -sV -T4 -O -F -version-light

Answer: B

NEW QUESTION # 222
An employee at a pharmaceutical company loses their organization-issued mobile device while attending an international conference. The device contained access to corporate email, cloud storage apps, and internal communication tools. Upon being informed, the company's incident response team attempts to take control of the device and protect sensitive data. However, they quickly discover that no centralized management setup or security controls had been established on the device, preventing them from locking the system or removing its stored information. Which preparation step would have enabled containment in this situation?

- A. Integrate biometric login across all endpoint systems.
- B. Install custom VPN protocols for mobile web access.
- C. Configure remote wipe functionality for mobile assets.
- D. Deploy mobile app wrapping tools for containerized code execution.

Answer: C

Explanation:
Comprehensive and Detailed Explanation (ECIH-aligned):
This incident highlights a failure in endpoint and mobile device preparation, a core area in the ECIH curriculum. Mobile devices often store or provide access to sensitive enterprise data, and when lost or stolen, they represent a high-risk exposure point. ECIH emphasizes that organizations must implement centralized mobile device management (MDM/EMM) controls as part of incident readiness.
Option D is correct because configuring remote wipe functionality allows an organization to immediately remove sensitive data from a lost or stolen device, even when physical access is no longer possible. Remote wipe is a critical containment capability that prevents data leakage, credential misuse, and unauthorized access to internal systems.
Option A strengthens authentication but does not help once the device is lost. Option B secures communications but does not address local data exposure. Option C improves application-level security but does not allow device-level containment.
ECIH stresses that preparation controls must support rapid containment actions. Without remote wipe capability, the response team is effectively powerless to protect data on a lost mobile device. Therefore, Option D is the correct and most effective preparation step.

NEW QUESTION # 223
In which of the following types of fuzz testing strategies the new data will be generated from scratch and the amount of data to be generated are predefined based on the testing model?

- A. Mutation-based fuzz testing
- B. Generation-based fuzz testing
- C. Protocol-based fuzz testing
- D. Log-based fuzz testing

Answer: B

Explanation:
Generation-based fuzz testing is a strategy where new test data is generated from scratch based on a predefined model that specifies the structure, type, and format of the input data. This approach is systematic and relies on a deep understanding of the format and protocol of the input data to create test cases that are both valid and potentially revealing of vulnerabilities. This contrasts with mutation-based fuzz testing, where existing data samples are modified (mutated) to produce new test cases, and log-based and protocol-based fuzz testing, which use different approaches to test software robustness andsecurity.References:ECIH v3 certification materials often cover software testing techniques, including fuzz testing, to identify vulnerabilities in applications by inputting unexpected or random data.

NEW QUESTION # 224
Which of the following is an inappropriate usage incident?

- A. Insider threat
- B. Access-control attack
- C. Reconnaissance attack
- D. Denial-of-service attack

Answer: A

NEW QUESTION # 225
You area systems administrator for a company. You are accessing your fileserver remotely for maintenance.
Suddenly, you are unable to access the server. After contacting others in your department, you find out that they cannot access the file server either.
You can ping the file server but not connect to it via RD. You check the Active Directory Server, and all is well.
You check the email server and find that emails are sent and received normally.
What is the most likely issue?

- A. An admin account issue
- B. A denial-of-service issue
- C. The fileserver has shutdown
- D. An email service issue

Answer: B
