EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q18-Q23):

NEW QUESTION # 18
Question:
What information is available in a capacity planning report for storage infrastructure?

- A. Current and historical information about the utilization of storage, file systems, and ports
- B. Equipment purchase dates, licenses, lease status, and maintenance records
- C. Current and historical performance information about IT components and operations
- D. Number of units of storage available, used, and the cost

Answer: A

Explanation:
Capacity planning reports in storage environments focus on:
* Utilization trends of storage systems (e.g., used vs. available space)
* File system usage (volumes, file systems)
* Ports (SAN/NAS connections)
This enables proactive capacity management and ensures enough resources are available to meet future demands.

NEW QUESTION # 19
Question:
When troubleshooting a virtual machine, which file is most likely to provide a detailed history of the VM's behavior?

- A. Memory state file
- B. Configuration file
- C. Log file
- D. Virtual disk file

Answer: C

Explanation:
Log files record events and messages related to the operations of a virtual machine. They provide detailed information about the VM's behavior, errors, and system messages, which are crucial for troubleshooting.

NEW QUESTION # 20
Question:
What type of disk devices are the highest performing and most expensive of all disk devices?

- A. SATA
- B. SAS
- C. FC
- D. SCM
- E. SSD

Answer: D

Explanation:
Storage Class Memory (SCM) represents a new class of storage technology that bridges the gap between traditional DRAM and NAND flash memory. SCM offers significantly lower latency and higher endurance compared to NAND flash, making it the highest-performing storage medium currently available. Due to its advanced technology and performance characteristics, SCM is also the most expensive among the listed options.
* FC (Fibre Channel): A network protocol used for high-speed data transfer, not a type of disk device.
* SATA (Serial ATA): Commonly used in consumer-grade storage; offers lower performance and cost.
* SAS (Serial Attached SCSI): Offers better performance than SATA but still lags behind SSDs and SCM.
* SSD (Solid State Drive): Provides faster data access than HDDs but is outperformed by SCM.
* SCM (Storage Class Memory): Combines the speed of DRAM with the persistence of NAND, offering unparalleled performance.

NEW QUESTION # 21
Question:
Which information is contained in a stub file?

- A. Name and size of the archived file
- B. Address of the source file
- C. Address of the archived file
- D. Hard drive address storing the archived file

Answer: C

Explanation:
A stub file is a small placeholder file that remains on primary storage after data has been archived or moved to secondary storage.
It contains a pointer or address of the archived data's location.
When accessed, the data is transparently retrieved from the archive.
* Address of the source file and other options do not accurately describe a stub file's purpose.

NEW QUESTION # 22
Question:
Which RAID level consists of two disk drives and every write is written to both disks?

- A. RAID 6
- B. RAID 1
- C. RAID 5
- D. RAID 1+0

Answer: B

Explanation:
RAID 1 is disk mirroring. It writes identical copies of data to two disks simultaneously, providing redundancy.
* Minimum of 2 disks (no parity, no striping).
* Excellent read performance, write performance equivalent to a single disk.
* Provides fault tolerance because data is duplicated.
