우리는 고객이 첫 번째 시도에서 Salesforce Plat-Dev-210 자격증 시험을 합격할 수 있다는 것을 약속드립니다. Salesforce Plat-Dev-210 시험을 합격하여 자격증을 손에 넣는다면 취직 혹은 연봉 인상 혹은 승진이나 이직에 확실한 가산점이 될 것입니다. Salesforce Plat-Dev-210 시험 어려운 시험이지만 저희 Salesforce Plat-Dev-210 덤프로 조금이나마 쉽게 따봅시다.

Salesforce Plat-Dev-210 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> Omnistudio Data Mappers: This part of the exam measures the skills of a Data Engineer and focuses on the use of Omnistudio Data Mappers for extracting, transforming, and loading data. It includes identifying the appropriate Data Mapper for a given requirement, as well as determining the necessary Extract, Load, Transform, and Turbo Extract functionalities based on specific use cases. This section ensures the candidate can effectively map and manipulate data to support business processes.

주제 2	<ul style="list-style-type: none"> • Integrated Troubleshooting and Deployment: This final section measures the skills of a Support Engineer and focuses on identifying and resolving issues within Omnistudio tools. It involves diagnosing errors based on given scenarios and determining where breakdowns occur in the data flow for specific customer issues. This ensures the candidate can effectively troubleshoot, debug, and maintain solutions to ensure optimal performance and reliability.
주제 3	<ul style="list-style-type: none"> • Flexcards: This section of the exam measures the skills of a Solution Architect and covers the ability to design and configure FlexCards based on specific business requirements. It evaluates the candidate's knowledge in selecting appropriate card styles, defining data sources and fields, and implementing user actions across different card states. Additionally, this domain tests the understanding of constructing the underlying JSON data structure that powers the FlexCards framework, ensuring that the configured cards meet both functional and technical specifications.

Salesforce 인증Plat-Dev-210인증시험공부자료는Itcertkr에서 제공해드리는Salesforce 인증Plat-Dev-210덤프가 가장 좋은 선택입니다. Itcertkr에서는 시험문제가 업데이트되면 덤프도 업데이트 진행하도록 최선을 다하여 업데이트서비스를 제공해드려 고객님의게서소유하신 덤프가 시장에서 가장 최신버전덤프로 되도록 보장하여 시험을 맞이할수 있게 도와드립니다.

최신 Salesforce Developer Plat-Dev-210 무료샘플문제 (Q104-Q109):

질문 # 104

A developer needs to change some field labels on a FlexCard. The FlexCard is currently deployed to production. The developer that the best course of action is to version the FlexCard rather than cloning it.

Which factor would lead the developer to this decision?

- A. The new version of the FlexCard will be used in a new Console, and the current version of the FlexCard should remain unchanged.
- B. All instances of the FlexCard must be updated with the changes.
- C. The new and current versions will be displayed together on the same target.
- D. Another team member is developing new actions, fields, and styling for the current version of the FlexCard.

정답: B

설명:

Versioning a FlexCard allows the developer to make changes to the FlexCard without affecting the existing instances of the FlexCard. The developer can choose to update all instances of the FlexCard with the new version or keep them as they are. This is useful when the changes are minor and do not affect the functionality or layout of the FlexCard. Cloning a FlexCard creates a copy of the FlexCard with a new name and ID. The developer can make changes to the cloned FlexCard without affecting the original FlexCard. This is useful when the changes are major and require a different configuration or design of the FlexCard. In this case, since all instances of the FlexCard must be updated with the changes, versioning is the best course of action.

질문 # 105

Refer to the exhibit below. In this Integration Procedure structure, what Send JSON Path would you use to send the output of the ActionZ element to a Response Action?

- A. BlockX:BlockY:ActionAZ
- B. BlockX.BlockYActionZ
- C. ActionZ:BlockY:BlockX
- D. ActionZ:BlockY:BlockX

정답: B

설명:

The Send JSON Path syntax for accessing an element from an Integration Procedure structure is BlockName.ElementName. In this case, the BlockName is BlockX and the ElementName is ActionZ. The colon (:) is used to separate the input and output parameters, not the block and element names. The order of the block and element names should follow the hierarchy of the structure, from top to bottom.

질문 # 106

In a calculation procedure, what is required for the output of a calculation step to be used in an aggregation step?

- A. It must be included in the calculation output.
- B. It must be a calculation step.
- C. It must be included in constants.
- D. It must be a matrix lookup step.

정답: A

설명:

In a calculation procedure, the output of a calculation step must be included in the calculation output in order to be used in an aggregation step. The calculation output defines the variables that are available for aggregation

질문 # 107

An OmniScript displays data from an API using Integration Procedure, but some of the data is missing. Which two configuration errors could cause this? Choose 2 answers

- A. The missing data is trimmed in the Integration Procedure Action Response JSON Path.
- B. The Integration Procedure Preview Input Parameters do not match the JSON sent from the OmniScript.
- C. The JSOW sent from the Integration Procedure Action does not match any of the Original Input for the Integration Procedure
- D. The element name for the missing data does not match the JSON node key in the Integration Procedure Response.

정답: C,D

설명:

The element name for the missing data must match the JSON node key in the Integration Procedure Response, otherwise the data will not be mapped correctly. The JSON sent from the Integration Procedure Action must match one of the Original Input for the Integration Procedure, otherwise the Integration Procedure will not execute properly. The Integration Procedure Preview Input Parameters and the Response JSON Path have no effect on displaying data in OmniScript.

질문 # 108

The OmniScript must retrieve device details stored in the Asset object and then call an external system to send troubleshooting commands via REST API to the device.

Which two OmniScript element should the developer use to configure this functionality?

- A. REST API Action
- B. Navigation Action
- C. HTTP Action
- D. DataRaptor Extract Action
- E. SOQL Action

정답: C,D

설명:

According to the OmniScript Action Elements page, a DataRaptor Extract Action can be used to "get data from one or more Salesforce records" and an HTTP Action can be used to "get, save, or delete data through a web application programming interface (API)".
