We offer free update for one year, it will help you to change your practicing ways in accordance with the dynamics of the exam.

ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q84-Q89):

NEW QUESTION # 84

Which of the following is a test-first approach, where tests that express a shared understanding from stakeholders of how the application is expected to work, are first written in business-readable language (following the Given/When/Then format), and then made executable to drive development?

- A. Behavior-Driven Development (BDD)
- B. Test-Driven Development (TDD)
- C. Domain-Driven Design (DDD)
- D. Acceptance Test-Driven Development (ATDD)

Answer: A

Explanation:

This answer is correct because Behavior-Driven Development (BDD) is a test-first approach, where tests that express a shared understanding from stakeholders of how the application is expected to work, are first written in business-readable language (following the Given/When/Then format), and then made executable to drive development. BDD is a collaborative approach that involves testers, developers, business analysts, product owners, and other stakeholders in defining the expected behavior of the application using scenarios that describe the preconditions, actions, and outcomes of the application. BDD scenarios are written using a domain-specific language (DSL) that can be translated into executable test cases using tools such as Cucumber or SpecFlow. BDD aims to improve communication, collaboration, and feedback among the team members, and to deliver software that meets the customer's needs and expectations. NEW QUESTION # 85

Which of the following examples represents System Integration testing?

- A. Testing the system based on specifications using simulator for a sub-system
- B. Testing an application's behaviour to check if it fulfils business needs
- C. Testing if e-commerce website works correctly with a third-party payment gateway
- D. Testing an application in development environment which is similar to the production environment

Answer: C

NEW QUESTION # 86

Which of the following is NOT a deciding factor in determining the extent of testing required?

- A. Budget to do testing
- B. A particular tester involved in testing
- C. Level of risk of the product or features
- D. Time available to do testing

Answer: B

Explanation:

The extent of testing required for a software product depends on various factors, such as the level of risk, the budget, and the time available. The level of risk reflects the potential impact of failures on the stakeholders and the environment. The budget determines how much resources can be allocated for testing. The time available defines the schedule and deadlines for testing activities. The particular tester involved in testing is not a deciding factor for the extent of testing required, as testing should be based on objective criteria and not on personal preferences or abilities. NEW QUESTION # 87

Consider the following defect report for an Exam Booking System

Defect ID: ST1041 | Title: Unable to cancel an exam booking | Severity: Very High | Priority: Very High | Environment: Windows 10, Firefox Description: When attempting to cancel an exam booking using the cancel exam feature, the system does not cancel the exam even though it shows a message that the exam has been cancelled.

Which ONE of the following indicates the information that should be added to the description for reproducing the defect easily?

- A. Repeating the test case with different browsers and logging a separate defect for each one of them
- B. The defect Id used is alphanumeric in nature. It should be a number only.
- C. Providing better severity and priority. It is not clear why this is a high severity problem as the exams can be booked without any problem.
- D. Providing exact steps that lead to this defect. It is not clear from the description if this is a problem for any scheduled exam or for a specific user.

Answer: D

NEW QUESTION # 88

For each of the test cases to be executed, the following table specifies the priority order and dependencies on other test cases

Test Case	Priority	Logical Dependencies
TC1	Low	TC5
TC2	High	TC3
TC3	High	TC4
TC4	High	-
TC5	Low	TC2
TC6	Medium	-

Which of the following test execution schedules is compatible with the logical dependencies and allows executing the test cases in priority order?

- A. TC4, TC3, TC2, TC6, TC1, TC5
- B. TC4, TC6, TC3, TC2, TC5, TC1
- C. TC3, TC5, TC6, TC1, TC4, TC3
- D. TC4, TC3, TC2, TC6, TC5, TC1

Answer: A

Explanation:

This answer is correct because it follows the logical dependencies and allows executing the test cases in priority order. TC4, TC3, and TC2 are executed first because they have the highest priority. TC6 is executed next because it has a logical dependency on TC2. TC1 is executed next because it has a logical dependency on TC5. Finally, TC5 is executed last because it has the lowest priority.
