## The best Talend-Core-Developer Practice Exam Preparation Materials are high pass rate - Exam4Docs

In order to let you have a deep understanding of our Talend-Core-Developer learning guide, our company designed the free demos for our customers. We will provide you with free demos of our study materials before you buy our products. If you want to know our Talend-Core-Developer training materials, you can download them from the web page of our company. If you use the free

demos of our Talend-Core-Developer study engine, you will find that our products are very useful for you to pass your Talend-Core-Developer exam and get the certification.

## Talend Core Certified Developer Exam Sample Questions (Q28-Q33):

### NEW QUESTION # 28

Which component can be used to read a CSV file in an ESB Route?

- A. **cFileInputDelimited**
- B. cMap
- C. tMap
- D. cFile
- E. tFileInputDelimited

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation:

In Talend's Enterprise Service Bus (ESB) routes, the appropriate component to read a CSV file is **cFileInputDelimited**. This component is specifically designed for Camel routes to handle delimited files like CSVs.

### NEW QUESTION # 29

Which operations can you perform using a tMap component? Choose 3 answers.

- A. **Map data using filters, constraints, and simple explicit joins.**
- B. Reject data using inner join rejections.
- C. **Perform full outer joins.**
- D. **Transform data from single or multiple sources to single or multiple destinations.**
- E. Load single lookup tables only.

**Answer: A,C,D**

Explanation:

Comprehensive and Detailed Explanation:

The tMap component in Talend allows for various data transformation and mapping operations. The correct operations include:

- \* A. Map data using filters, constraints, and simple explicit joins.
- \* tMap allows mapping fields between sources and destinations with filters and constraints.
- \* B. Perform full outer joins.
- \* Unlike tJoin, tMap supports full outer joins, allowing all records from both tables to be included.
- \* C. Transform data from single or multiple sources to single or multiple destinations.
- \* You can map multiple input sources to multiple output targets with transformations.

### NEW QUESTION # 30

Which statements are true about the execution logs of a task running on a Remote Engine? Choose 2 answers.

- A. **Logs are stored in the file system of the server where the Remote Engine is running.**
- B. Logs are stored in an H2 database hosted on the server where the Remote Engine is running.
- C. **Logs can be downloaded from Talend Management Console.**
- D. Logs are stored in Parquet format on the server where the Remote Engine is running.

**Answer: A,C**

Explanation:

Comprehensive and Detailed Explanation:

When a task executes on a Talend Remote Engine, the execution logs are handled as follows:

- \* Logs are stored in the file system of the server where the Remote Engine is running (Option A):
- \* The Remote Engine writes execution logs to its local file system, typically in plain text or log formats. These logs provide detailed information about the task's execution and are essential for troubleshooting and monitoring.
- \* Logs can be downloaded from Talend Management Console (Option C):

- \* Talend Management Console (TMC) aggregates execution logs from Remote Engines, allowing users to access and download them directly through the TMC interface. This centralized access simplifies monitoring and debugging across multiple environments. Why not other options?
- \* Option B: While some components of Talend may use H2 databases for internal purposes, execution logs are not typically stored in an H2 database on the Remote Engine server.
- \* Option D: Execution logs are generally stored in plain text or standard log formats, not in Parquet format. Parquet is a columnar storage file format commonly used for efficient data processing, not for logging purposes.

### NEW QUESTION # 31

You built multiple Jobs in Studio, each uses its own tDBInput component to connect to a common database server, but they all use different credentials. How should you configure the tDBInput components?

- A. Set the Database field to Metadata.
- B. Set the Property type to Repository and use a common DB connection metadata.
- **C. Set the Property type to Built-in and set all the relevant properties manually.**
- D. Set the Property type to Repository and replace the credentials in each component.

#### Answer: C

Explanation:

Comprehensive and Detailed Explanation:

When multiple Jobs require connections to the same database server but with different credentials, the recommended approach is:

\* Set the Property Type to Built-in and Set All the Relevant Properties Manually (Option C):

\* In each tDBInput component, set the 'Property Type' to 'Built-in.'

\* Manually enter the connection details, including the specific username and password required for that particular Job.

This approach ensures that each Job uses its own set of credentials, maintaining the necessary security and access controls.

### NEW QUESTION # 32

Where can you specify the remote JobServer to execute a Job?

- A. Job settings section of the Project Settings windows
- B. Run/Debug section in the Preference window
- **C. Target Exec tab in the Run view**
- D. Extra tab in the Job view

#### Answer: C

Explanation:

To specify the remote JobServer to execute a job, you need to use the Target Exec tab in the Run view of Talend Studio. The Run view allows you to configure and execute your job from Talend Studio. The Target Exec tab allows you to select whether you want to run your job locally or remotely on a JobServer. A JobServer is a server application that allows you to execute jobs remotely from Talend Studio or Talend Administration Center. To run your job on a remote JobServer, you need to select Remote Jobserver option from the drop-down menu and select or add a JobServer connection from the list.

You do not need to use Job settings section of Project Settings window, Extra tab in Job view, or Run/Debug section in Preferences window. These windows are not used to specify remote JobServer execution. The Job settings section of Project Settings window is used to configure general settings for your jobs, such as versioning, statistics, logs, etc. The Extra tab in Job view is used to configure extra features for your job, such as implicit context load, tStatCatcher, tLogCatcher, etc. The Run/Debug section in Preferences window is used to configure run/debug settings for your Talend Studio, such as JVM arguments, execution mode, etc. References: Talend Open Studio: Open-source ETL and Free Data Integration | Talend, [Run view - 7.3], [Project Settings - 7.3], [Job view - 7.3], [Preferences - 7.3]

### NEW QUESTION # 33

.....

Our Talend-Core-Developer study materials include all the qualification tests in recent years, as well as corresponding supporting materials. Such a huge amount of database can greatly satisfy users' learning needs. Not enough valid Talend-Core-Developer learning materials, will bring many inconvenience to the user, such as delay learning progress, reduce the learning efficiency eventually

lead to the user's study achievement was not significant, these are not conducive to the user pass exam, therefore, in order to solve these problems, our Talend-Core-Developer Study Materials will do a complete summarize and precision of summary analysis.
