Last but not least, our perfect customer service staff will provide users with the highest quality and satisfaction in the hours.

UiPath Agentic Automation Associate Sample Questions (Q60-Q65):

NEW QUESTION # 60

Which PowerShell command should a Citrix Administrator run to obtain the name of a deployment, the local host cache configuration and the license level?

- A. Get-BrokerResource
- **B. Get-BrokerSite**
- C. Get-BrokerCatalog
- D. Get-BrokerController

Answer: B

Explanation:

The Get-BrokerSite PowerShell command retrieves details about the Citrix Site, including the deployment name, local host cache configuration, and license level. This makes it the correct command for gathering this type of information.

NEW QUESTION # 61

Which two statements are valid when using Citrix Profile Streaming? (Choose two.)

- A. Profile Streaming will delay the logon process.
- B. The files and folders are fetched on demand.
- C. Profile Streaming is disabled by default.
- D. Registry entries and files in the pending area are fetched when accessed.

Answer: B,D

Explanation:

With Citrix Profile Streaming, parts of the user profile (such as registry entries and files) are loaded on demand instead of fully at logon. This reduces logon time by fetching profile components only when accessed during the session.

NEW QUESTION # 62

Which three authentication features require Citrix XML Service trust to be enabled within a Citrix Virtual Apps and Desktops infrastructure? (Choose three.)

- A. Pass-through from NetScaler Gateway
- B. HTTP Basic
- C. Smart card
- D. Pass-through
- E. Smart Access

Answer: A,B,D

Explanation:

Citrix XML Service trust must be enabled when authentication credentials need to be passed securely from StoreFront to the Delivery Controller. This applies to HTTP Basic authentication, pass-through from NetScaler Gateway, and pass-through authentication, all of which rely on trusted XML communication.

NEW QUESTION # 63

A Citrix Administrator is configuring a Citrix Virtual Desktops Site for use with a mirrored SQL Server database. Which setting in SQL is important that the administrator configure manually when creating an empty database on the principal SQL Server?

- A. SQL Version Number
- B. SQL Mirroring Version
- C. Database Type Setting
- D. Collation Setting

Answer: D

Explanation:

When configuring a Citrix Virtual Desktops Site with a mirrored SQL Server database, the collation setting must be configured manually and must match across all SQL Servers in the mirroring setup. Citrix relies on consistent collation to ensure proper database functionality.

NEW QUESTION # 64

Scenario: A Citrix Administrator needs to power-manage a group of Server OS Virtual Delivery Agent (VDA) machines that are all in the same Delivery Group. The administrator needs all the machines to be restarted once a week during the weekend. Additionally, a subset of the machines should be restarted every day during non-peak hours. Which feature must the administrator change from the default values in order to fulfill the requirements?

- A. Tag restrictions
- B. Weekday and weekend hours
- C. Restart duration

- D. Peak and non-peak hours

Answer: A

Explanation:

Tag restrictions allow administrators to apply different power management schedules to subsets of machines within the same Delivery Group. By tagging certain Server OS VDAs, the administrator can configure weekly restarts for all machines and daily restarts for only the tagged subset during non-peak hours.

NEW QUESTION # 65

.....

UiAAAv1 practice software creates an atmosphere just like a real UiPath exam thus developing your confidence and leaving no space for any surprises that make you anxious on the day of the exam. Moreover, the software is developed by Prep4sureExam in a way that is simple to use and helps you perform better at the UiPath Agentic Automation Associate exam.
