

# Valid 2V0-15.25 Vce Dumps, New 2V0-15.25 Exam Papers

P.S. Free & New 2V0-15.25 dumps are available on Google Drive shared by Exam-Killer: [https://drive.google.com/open?id=1pZ4w0sS4hjyfUzRquRdX9gCuSB\\_kZu00](https://drive.google.com/open?id=1pZ4w0sS4hjyfUzRquRdX9gCuSB_kZu00)

The 2V0-15.25 exam questions are the ideal and recommended study material for quick and easiest VMware Cloud Foundation 9.0 Support (2V0-15.25) exam dumps preparation. The VMware Cloud Foundation 9.0 Support (2V0-15.25) practice questions are designed and verified by qualified and renowned VMware Certification Exams trainers. They work closely and check all VMware 2V0-15.25 Exam Dumps step by step. They also ensure the best possible answer for all 2V0-15.25 exam questions and strive hard to maintain the top standard of VMware Cloud Foundation 9.0 Support (2V0-15.25) exam dumps all the time.

Many candidates are afraid of the validity of VMware 2V0-15.25 latest study guide or how long the validity last. We guarantee that all our on-sale products are the latest version. If the real test questions change, and then we release new version you can download the latest New 2V0-15.25 Study Guide any time within one year. We also will provide one year service warranty. Our professional 24-online service staff will be on duty for you any time.

## New 2V0-15.25 Exam Papers - Reliable 2V0-15.25 Test Practice

Now we live in a highly competitive world. If you want to find a decent job and earn a high salary you must own excellent competences and rich knowledge. Under this circumstance, owning a 2V0-15.25 guide torrent is very important because it means you master good competences in certain areas and can handle the job well. The 2V0-15.25 exam prep we provide can help you realize your dream to pass exam and then own a 2V0-15.25 exam torrent. Exam-Killer provide high pass rate materials that are compiled by experts with profound experiences according to the latest development in the theory and the practice so they are of great value. Please firstly try out our 2V0-15.25 Exam Materials demo before you decide to buy our product. It is worthy for you to buy our 2V0-15.25 exam preparation not only because it can help you pass the exam successfully but also because it saves your time and energy.

## VMware 2V0-15.25 Exam Syllabus Topics:

---

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>IT Architectures, Technologies, Standards: This domain covers fundamental frameworks, tools, and best practices for building scalable, secure, and interoperable enterprise IT systems.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>VMware by Broadcom Solution: This section focuses on understanding VMware by Broadcom's virtualization and cloud infrastructure platform for managing modern enterprise workloads.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Troubleshoot and Optimize the VMware by Broadcom Solution: This domain focuses on troubleshooting VCF deployment, upgrades, conversions, workload domains, fleet operations (certificates, passwords, identity), licensing, compute resources, storage (vSAN, supplemental storage), networking (VDS, NSX), VCF Operations tools, Identity Broker automation, and HCX workload migrations.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Plan and Design the VMware by Broadcom Solution: This domain addresses architectural planning and design principles for creating scalable, secure virtual environments aligned with business requirements.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Install, Configure, Administrate the VMware by Broadcom Solution: This area covers installing, configuring, and managing VMware solutions including VCF Fleet deployment, expansion, and reduction operations.</li> </ul>

## VMware Cloud Foundation 9.0 Support Sample Questions (Q52-Q57):

### NEW QUESTION # 52

An administrator has observed that the vSphere Global Inventory is only available from the management domain vCenter. The Global Inventory is not available from the workload domain's vCenter.

Why is the "Global Inventory" missing from the workload domain's vCenter?

- A. Supervisor Management has not been enabled.
- B. VCF SSO and vCenter Linking have not been configured.
- C. An inventory sync was not run following the workload domain creation.
- D. An external VIDB instance has not been configured.

**Answer: B**

Explanation:

The Global Inventory List (GIL) is only available when multi-vCenter SSO domain linking is configured. In VMware Cloud Foundation, the management domain vCenter is deployed first and becomes the root vCenter for global inventory data. For workload domains, their vCenter Servers must be registered into the same SSO domain and linked with the management-domain vCenter in order for the global inventory data (VMs, hosts, clusters, content libraries) to appear.

If a workload domain vCenter is not SSO-linked, it operates in its own identity domain, and therefore cannot access or present Global Inventory, resulting in exactly the symptom described: the management domain vCenter shows the GIL, while the workload domain vCenter does not.

Option B (Supervisor Management) relates to vSphere with Tanzu and has no impact on Global Inventory.

Option C (inventory sync) is incorrect—there is no manual sync required; GIL relies entirely on SSO linking.

Option D (VIDB) is not related to vCenter linking or inventory visibility; it is used by VCF Identity Broker.

Therefore, the reason the Global Inventory is missing from the workload domain vCenter is that SSO/vCenter Linking has not been configured, which is required for federation across all VCF vCenters.

### NEW QUESTION # 53

An administrator is responsible for supporting a VMware Cloud Foundation (VCF) fleet and has been tasked with deploying VMware Cloud Foundation (VCF) Operations for Logs. To complete this task, the administrator needs to configure a new offline depot within VCF Operations fleet management.

The following information has been provided to the administrator to complete the task:

\* Offline Depot Type: Webserver

\* Repository

URL: http://10.138.148.160/depot/

\* Username: depotuser

\* Password: P@ssword!23!

\* Accept imported certificate: True

When the administrator attempts to configure the depot, the following error message is presented:

Either the depot URL provided is partial or invalid or not reachable or download token is invalid. Check logs for more details.

The administrator completes the following troubleshooting steps:

\* Confirms the Repository URL is valid by connecting to it through a web browser.

\* Reviews the command used to create the depot:

```
o ./vcf-download-tool binaries download --depot-store=/VCF --depot-download-token-file=<token_file_path> -  
-vcf-version=9.0.0.0 --sku=VCF --component=VRLI --type=INSTALL
```

\* Confirms that the downloaded folder and files were copied into the /depot shared folder on the web server hosting the repository

Which two actions must the administrator take to resolve the issue? (Choose two.)

- A. Reconfigure the web server to share the /vcf/ folder containing the depot files.
- B. When configuring the offline depot, the OfflineDepotType should be changed to Local Path.
- C. When configuring the offline depot, the Repository URL should be changed to http://10.138.148.160.
- D. Reconfigure the Fleet Manager appliance to share the /data/ folder.
- E. When configuring the offline depot, the Repository URL should be changed to https://10.138.148.160/depot/.

**Answer: A,E**

Explanation:

To resolve the "partial or invalid or not reachable" error when configuring the VCF 9.0 Offline Depot, the administrator must address two critical misconfigurations related to the protocol and the file path mapping:

\* Switch to HTTPS (Option E): VMware Cloud Foundation 9.0 enforces HTTPS by default for all depot connections to ensure security. The administrator's configuration uses http://, which the VCF Fleet Manager will reject (or fail to connect to) unless the system has been explicitly modified via internal properties files to allow insecure transport. Changing the Repository URL to https://10.

138.148.160/depot/ aligns with the default security requirements of the VCF 9.0 binaries download and validation process.

\* Reconfigure Web Server Pathing (Option A): The command --depot-store=/VCF instructs the download tool to create a repository structure rooted at /VCF. The administrator then copied this

"downloaded folder" into the /depot folder on the web server, resulting in a nested path (e.g., /var/www

/html/depot/VCF/...). However, the configured URL is ../depot/, which points to the parent directory where the required index.json or metadata files are not immediately visible. The administrator must reconfigure the web server (e.g., via DocumentRoot or Alias settings) to explicitly share the specific

/vcf/ (or /VCF/) folder content at the target URL so the Fleet Manager can locate the manifest files.

#### NEW QUESTION # 54

In VMware Cloud Foundation (VCF) Automation an administrator is troubleshooting an issue with a newly created Organization. When the Organization administrator attempts to create a Namespace, they receive an error "Failed to list VPC after selecting a region.

The administrator logs into the NSX Manager for the Region and does not see an NSX Project for the Organization. What could cause these symptoms?

- A. The Organization Administrator hasn't created a Project in the selected Region.
- B. The Organization Administrator hasn't created a VPC in the selected Region.
- C. The Provider Administrator hasn't set up the Organization's Networking Configuration for the selected Region.
- D. The Provider Administrator hasn't granted the Organization Administrator role to the First User.

**Answer: C**

Explanation:

In VMware Cloud Foundation 9.0 Automation, every Organization requires a properly configured Networking Configuration for each Region in which it operates. This configuration step—performed by the Provider Administrator—creates the NSX Project corresponding to the Organization, enabling Namespace creation, VPC visibility, and workload provisioning.

The error "Failed to list VPC after selecting a region" combined with the absence of an NSX Project in NSX Manager is a direct indicator that the Organization's Networking Configuration was never initialized. VCF Automation automatically creates the NSX Project only when the Provider Admin completes this step.

Option B is invalid because the Organization Administrator cannot create NSX Projects manually; they are system-generated during networking setup.

Option C is incorrect because role assignment affects administrative permissions, not NSX project creation.

Option D is also incorrect-the Organization Admin cannot create a VPC until the NSX Project exists.

#### NEW QUESTION # 55

An administrator determined that the VMware NSX admin password expired on their VMware NSX Edge Transport nodes. The administrator manually resets the password in the console of each Edge Transport node.

What additional action is required to synchronize the new password in VMware Cloud Foundation (VCF) Operations?

- A. In VCF Operations, rotate the admin password for each NSX Edge Transport node.
- **B. In VCF Operations, remediate the admin password for each NSX Edge Transport node.**
- C. In VCF Operations, sync the admin password for each NSX Edge Transport node.
- D. In VCF Operations, update the admin password for each NSX Edge Transport node.

**Answer: B**

Explanation:

In VMware Cloud Foundation 9.0, password changes made manually on an NSX Edge Transport Node are not automatically synchronized with VCF Operations. VCF Operations maintains secure credential records for all managed components, including NSX Manager appliances and NSX Edge Transport Nodes. When credentials become stale-such as after a password expiration and manual reset-VCF Operations marks the credential object as out of sync and requires administrative remediation.

The official workflow described in VCF 9.0 Operations documentation states that administrators must use the "Remediate Password" function whenever a password was changed outside of VCF Operations, ensuring that the platform revalidates and updates the stored credentials used for monitoring, log collection, and automation tasks. Options such as "rotate," "sync," or "update" do not apply because rotation implies generating a new password managed by VCF, and "sync" does not overwrite the stored credential. Only remediation forces VCF Operations to re-validate and align credentials with the external system.

Therefore, after manually resetting the NSX Edge admin password, the administrator must perform password remediation in VCF Operations to restore operational consistency, making B the correct and verified answer.

#### NEW QUESTION # 56

An administrator configures a new VMware Cloud Foundation (VCF) instance in a remote site using a vSAN Express Storage Architecture (ESA) for the workload domain cluster. vSAN ESA is configured with Auto-Policy Management and is designed to tolerate a single failure. The cluster experiences a hardware failure and on investigation, the administrator discovers that the affected objects did not re-protect and remain in a "Reduced availability with no rebuild" state.

How can the administrator explain why the vSAN objects did not rebuild as expected?

- **A. The number of ESX hosts doesn't support rebuilds during an outage.**
- B. The storage devices are not certified for vSAN.
- C. The existing disk groups need to be expanded to support additional capacity.
- D. The storage policy needs to be modified to support forced provisioning.

**Answer: A**

Explanation:

In VMware Cloud Foundation 9.0, using vSAN Express Storage Architecture (ESA) with Auto-Policy Management, the system automatically selects the correct storage policy based on the cluster size and desired failure protection. When the administrator configures tolerance for a single failure (FTT=1 using RAID-1 mirroring), vSAN ESA requires sufficient remaining hosts during a failure event to reprotect objects.

A minimum of 3 ESA-capable hosts is required for RAID-1, and re-protection after a failure requires enough hosts with available capacity to place new replica components. In small ESA clusters (e.g., 3 or 4 nodes), if one host fails, the remaining hosts may not meet the placement rules for automatic rebuild to restore compliance. ESA enforces strict placement rules to maintain consistent performance and resilience; if vSAN determines that object layout compliance cannot be restored without violating these rules, it enters Reduced availability with no rebuild state.

This behavior is expected and documented: rebuilds cannot occur if the cluster does not have sufficient hosts or free capacity to recreate absent components. The administrator's ESA configuration behaved correctly given the cluster size limitation, making B the correct answer.

## NEW QUESTION # 57

.....

It is a prevailing belief for many people that practice separated from theories are blindfold. Our 2V0-15.25 learning quiz is a salutary guidance helping you achieve success. The numerous feedbacks from our clients praised and tested our strength on this career, thus our 2V0-15.25 practice materials get the epithet of high quality and accuracy. We are considered the best ally to our customers who want to pass their 2V0-15.25 exam by their first attempt and achieve the certification successfully!
