Even if you study well but with no idea of the Google Cloud Certified - Professional Google Workspace Administrator Google-Workspace-Administrator exam pattern, it will be tough to crack the nut. You shall waste your time thinking about the pattern and how to attempt the Google Cloud Certified - Professional Google Workspace Administrator Google-Workspace-Administrator Exam Questions. On the other hand, if you know the Google Cloud Certified - Professional Google Workspace

Administrator Google-Workspace-Administrator exam questions well, you can use that time to solve the queries and improve your chances to score well in the exam.

Google Cloud Certified - Professional Google Workspace Administrator Sample Questions (Q87-Q92):

NEW QUESTION # 87

A user does not follow their sign-in pattern and signs In from an unusual location As an admin, what should you do in response to this alert for this user during this investigation?

- A. Add Two Factor Authentication to the Domain
- B. First suspend the account and then investigate
- C. Investigate the account for unauthorized activity in the Login and Security Audit Log
- D. Enhance your security alerts for tracking sign-in patterns

Answer: C

Explanation:

Access Admin Console: Go to admin.google.com and sign in with your admin account.

Navigate to Reports: In the Admin console, go to Reports > Audit > Login.

Review Login Activity: Look for any unusual or suspicious login attempts, such as logins from unknown IP addresses or locations.

Investigate Further:

Check the user's activity for any signs of unauthorized access or unusual behavior.

Use the Security Audit Log to find more details about the login attempts and other security events.

Take Appropriate Actions:

If unauthorized activity is confirmed, consider resetting the user's password and enabling two-factor authentication (2FA).

Notify the user and possibly suspend the account if the threat level is high until the issue is resolved.

By investigating the login and security logs, you can identify and mitigate potential security threats effectively.

NEW QUESTION # 88

The Google Analytics service is set to OFF for your entire organization. All users in the marketing team OU and a subset of users in the sales OU need access to Analytics. The rest of the organization should not have access. You must configure access in Additional Google services.

What should you do?

- A. Enable Google Analytics for the marketing and sales OUs. Create a group to deny access to Google Analytics and assign it to the sales users who should not have access.
- B. Enable Google Analytics for the marketing OU. Create a sub-OU for the sales users under the marketing OU.
- C. Enable Google Analytics for the marketing OU. Create a group from the Admin console that includes the sales users, and set Google Analytics to On for that group.
- D. Enable Google Analytics at the top of the OU structure.

Answer: C

Explanation:

This is the most efficient solution as it directly targets the users who need access without unnecessary complications.

NEW QUESTION # 89

Recently your organization has had an increase in messages marked as spam You need to quickly and efficiently obtain detailed information regarding each message What should you do?

- A. Create an investigation by using a SQL query to search for all spam audit logs exported to BigQuery
- B. Use the spam filter report in the security dashboard to see messages Google's spam filter marked as spam during a specific time period
- C. Use Google Vault to put all messages marked as spam in a legal hold and review the messages

- D. Send an alert to all users to mark all suspicious Gmail messages as spam and review the Alert center messages

Answer: B

Explanation:

Access Security Dashboard: Go to the Google Admin console and navigate to the 'Security' section.

Open Spam Filter Report: In the security dashboard, open the spam filter report.

Filter by Time Period: Select the specific time period you want to analyze.

Review Spam Messages: Review the detailed information regarding each message marked as spam by Google's spam filter.

Take Necessary Actions: Use the information from the report to adjust spam filters, user alerts, or take other necessary actions to manage spam more effectively.

NEW QUESTION # 90

Your company's Google Workspace primary domain is "mycompany.com," and it has acquired a startup that is using another cloud provider with a domain named "mystartup.com." You plan to add all employees from the startup to your Google Workspace domain while preserving their current mail addresses. The startup CEO's email address is andrea@mystartup.com, which also matches your company CEO's email address as andrea@mycompany.com, even though they are different people. Each must keep the usage of their email. In addition, your manager asked to have all existing security policies applied for the new employees without any duplication. What should you do to implement the migration?

- A. Create a new Google Workspace domain with "mystartup.com," and create a trust between both domains for reusing the same security policies and sharing employee information within the companies.
- B. Create the startup employees in the "mycompany.com" domain, and add a number at the end of the user name whenever there is a conflict. In Gmail > Routing, define a specific route for the OU that targets the startup employees, which will modify the email address domain to "mystartup.com," and remove any numbers previously added. In addition, confirm that the SPF and DKIM records are properly set.
- C. Create an alias domain, mystartup.com, in your existing Google Workspace domain, set up necessary DNS records, and create all startup employees with the alias domain as their primary email addresses.
- D. Create a secondary domain, mystartup.com, within your current Google Workspace domain, set up necessary DNS records, and create all startup employees with the secondary domain as their primary email addresses.

Answer: D

Explanation:

* Secondary Domain:

* A secondary domain allows you to add another domain to your existing Google Workspace account without creating a separate account.

* This is useful for managing users from different domains under a single Google Workspace instance.

* Steps to Add a Secondary Domain:

* Navigate to the Google Admin console.

* Go to Account > Domains > Manage domains.

* Click "Add a domain" and select "Add another domain".

* Enter the domain name (mystartup.com) and follow the prompts to verify domain ownership by updating DNS records.

* Once verified, create users under the secondary domain:

* Navigate to Directory > Users.

* Click "Add new user" and enter user information, selecting the secondary domain for their email address.

* Ensure all existing security policies are applied by assigning the users to the appropriate organizational units.
