Provides Excellent SC-900 Prep Guide for SC-900 Exam - Test4Engine

It would take a lot of serious effort to pass the Microsoft SC-900 exam, therefore it wouldn't be simple. So, you have to prepare yourself for this. But since we are here to assist you, you need not worry about how you will study for the Microsoft Security Compliance and Identity Fundamentals (SC-900) exam dumps. You can get help from us on how to get ready for the Microsoft

SC-900 Exam Questions. We will accomplish this objective by giving you access to some excellent SC-900 practice test material that will enable you to get ready for the Microsoft Security Compliance and Identity Fundamentals (SC-900) exam dumps.

Microsoft Security Compliance and Identity Fundamentals Sample Questions (Q146-Q151):

NEW QUESTION # 146

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

Microsoft states that Identity Protection is used to "detect potential vulnerabilities affecting your organization's identities, configure automated responses, and investigate suspicious actions related to your organization's identities." It evaluates user risk and sign-in risk using detections such as "leaked credentials, anonymous IP address, unfamiliar sign-in properties, [and] impossible travel." These built-in detections confirm that the service can detect whether valid user credentials have been found in public or criminal datasets—commonly referred to as leaked credentials—thereby reducing identity compromise risk.

Identity Protection includes policy controls that "automate the response to detected risks," specifically the User risk policy and Sign-in risk policy. Microsoft describes that these policies can "require password change when user risk is detected" and "require multi-factor authentication when sign-in risk is detected." Therefore, Identity Protection can invoke MFA based on risk as part of Conditional Access-backed risk policies.

However, Identity Protection does not perform group lifecycle management. Microsoft positions group membership automation under Azure AD dynamic groups/Identity Governance, not Identity Protection.

Consequently, adding users to groups based on risk level is not a function of Identity Protection, which focuses on detection, risk evaluation, and policy-driven remediation (e.g., MFA or password reset), not group assignment.

NEW QUESTION # 147

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Graphical user interface, text, application, email Description automatically generated

NEW QUESTION # 148

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:
