

Free PDF Quiz 2026 High Pass-Rate Mule-Dev-202: Cost Effective Salesforce Certified MuleSoft Hyperautomation Developer Dumps

From the moment you first touch Mule-Dev-202 simulating exam, you can feel the sense of security we are trying to bring you. You are not only the user of Mule-Dev-202 training prep, but also our family and friends. We have the same goal to let you enjoy the best service and the best quality of our Mule-Dev-202 Exam Questions. Meanwhile, we have developed our Mule-Dev-202 learning braindumps so much to help you pass the exam. And you will be bound to pass the exam with our Mule-Dev-202 training quiz.

The Mule-Dev-202 quiz torrent we provide is compiled by experts with profound experiences according to the latest development in the theory and the practice so they are of great value. Please firstly try out our product before you decide to buy our product. It is worthy for you to buy our Mule-Dev-202 Exam Preparation not only because it can help you pass the Mule-Dev-202 exam successfully but also because it saves your time and energy. Your satisfactions are our aim of the service and please take it easy to buy our Mule-Dev-202 quiz torrent.

Mule-Dev-202 Valid Dumps Pdf - Mule-Dev-202 Reliable Exam Materials

We all know that pass the Mule-Dev-202 exam will bring us many benefits, but it is not easy for every candidate to achieve it. The Mule-Dev-202 guide torrent is a tool that aimed to help every candidate to pass the exam. Our Mule-Dev-202 exam materials can installation and download set no limits for difficulty of the computers and persons. You can use our Mule-Dev-202 Practice Questions directly. We guarantee you that the Mule-Dev-202 study materials we provide to you are useful and can help you pass the test.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q54-Q59):

NEW QUESTION # 54

An RPA process is invoked by a MuleSoft Composer flow. The RPA process has a User Task that can take up to 24 hours to complete.

- A. Create a second MuleSoft Composer flow that starts when the RPA process is complete.
- B. Wait for the RPA process to complete and use the results in the same MuleSoft Composer flow.
- C. Using best practices, how should the results be consumed by MuleSoft Composer?
- D. Create a second MuleSoft Composer flow that runs on a schedule and checks if the RPA process is complete.
- E. Wait for the RPA process to complete and invoke a second MuleSoft Composer flow via REST API.

Answer: A

Explanation:

When an RPA process involves a User Task that can take a significant amount of time (up to 24 hours) to complete, it is best to use a follow-up mechanism to handle the results once the process is finished:

Second MuleSoft Composer Flow:

Create a second MuleSoft Composer flow that is triggered when the RPA process completes. This ensures that the first flow is not held up while waiting for the long-running RPA process to finish.

The second flow can start based on an event, such as the completion status of the RPA process, ensuring timely and efficient processing of the results.

Trigger Mechanism:

Configure the RPA process to notify MuleSoft Composer when it is complete, possibly using a REST API or another integration method.

Best Practices:

This approach adheres to best practices by keeping flows modular and focused on specific tasks, making them easier to manage and troubleshoot.

NEW QUESTION # 55

AnyAirlines needs to select a tool for developing an integration between Salesforce and an ERP system in the cloud. The requirements state that the systems must communicate bidirectionally and as close to real time as possible. The ERP system can be accessed via a SOAP-based web service.

Which tool meets the requirements of this integration?

- A. Anypoint Studio
- B. MuleSoft Composer
- C. MuleSoft RPA
- D. Orchestrator

Answer: A

Explanation:

Anypoint Studio is the most suitable tool for developing an integration between Salesforce and an ERP system in the cloud, especially when bidirectional communication in near real-time is required. Here's why:

SOAP-Based Web Services Support:

Anypoint Studio supports SOAP-based web services, which is essential since the ERP system can be accessed via SOAP.

Bidirectional Communication:

Anypoint Studio allows for complex integrations that require bidirectional communication. You can set up flows that handle both inbound and outbound data seamlessly.

Real-Time Integration:

With Anypoint Studio, you can design integrations that process data in near real-time, ensuring timely updates between Salesforce and the ERP system.

Advanced Integration Capabilities:

Anypoint Studio offers advanced capabilities for data transformation, error handling, and connecting various systems, making it ideal for complex integration scenarios.

NEW QUESTION # 56

AnyAirlines is developing an RPA process to extract information from a legacy system. To capture the manual workflow, they leverage RPA Recorder.

Which two best practices should they be aware of when working with the autogenerated workflow code?
(Choose two.)

- A. All autocaptured information is for documentation purposes only.
- **B. The autogenerated workflows may contain sensitive information that must be removed.**
- **C. Some autogenerated code must be replaced with more robust or specialized action steps.**
- D. All keystrokes and mouse clicks in the autogenerated code must be disabled before deploying to production.

Answer: B,C

Explanation:

When developing an RPA process using RPA Recorder, it is essential to be mindful of the following best practices concerning the autogenerated workflow code:

Replace Autogenerated Code:

Robustness: Some of the autogenerated code may not be optimized for robustness or specific use cases. It is often necessary to review and replace parts of the autogenerated workflow with more robust or specialized action steps to ensure reliability and accuracy.

Specialization: Customizing the workflow to fit the specific requirements of the process can improve performance and handle exceptions better.

Remove Sensitive Information:

Sensitive Data: Autogenerated workflows might capture sensitive information such as usernames, passwords, or other confidential data. It is crucial to identify and remove or mask this information before deploying the RPA process to production to maintain security and compliance.

Compliance: Ensuring that sensitive information is handled appropriately helps in adhering to data protection regulations and organizational policies.

NEW QUESTION # 57

Which Connected App scope should be used to connect RPA Manager with an Anypoint Platform account?

- **A. RPA Integrator**
- B. API Catalog Contributor
- C. Exchange Administrator
- D. Application Creator

Answer: A

Explanation:

To connect RPA Manager with an Anypoint Platform account, the appropriate Connected App scope is RPA Integrator:

RPA Integrator Scope:

The RPA Integrator scope is designed to provide the necessary permissions for integrating RPA Manager with Anypoint Platform. This scope allows the connected app to interact with the RPA Manager and manage RPA processes.

Connected App Configuration:

When setting up a connected app in Anypoint Platform, select the RPA Integrator scope to ensure that the integration can access and manage the RPA processes as required.

Anypoint Platform Connected Apps Documentation

NEW QUESTION # 58

A MuleSoft developer at AnyAirlines is tasked with creating a new API for an integration.
According to best practices, what is the first step they need to perform?

- A. Create a new project in Anypoint Studio.
- B. Install a standalone Mule runtime on their local machine.
- **C. Create a RAML definition in Design Center.**
- D. Create a case in Salesforce.

Answer: C

Explanation:

RAML Definition Creation: The first step in creating a new API as per MuleSoft best practices is to create a RAML (RESTful API Modeling Language) definition in the Design Center. This step is critical as it outlines the API's structure, endpoints, methods, and data types, providing a clear blueprint for subsequent development.

Reference: MuleSoft API Design Best Practices

Project Creation in Anypoint Studio: Once the RAML definition is created, the next step would be to generate the API project in Anypoint Studio. This IDE allows developers to implement the API logic as defined in the RAML.

Reference: Getting Started with Anypoint Studio

Mule Runtime Installation: Installing Mule runtime is necessary for running and testing Mule applications locally. However, this step is secondary to defining the API's structure.

Reference: Mule Runtime Installation

Case Creation in Salesforce: Creating a case in Salesforce is not relevant to the API development process but may be necessary for support or project management purposes.

Reference: Salesforce Case Management

NEW QUESTION # 59

.....

In the course of your study, the test engine of Mule-Dev-202 actual exam will be convenient to strengthen the weaknesses in the learning process. This can be used as an alternative to the process of sorting out the wrong questions of Mule-Dev-202 learning guide in peacetime learning, which not only help you save time, but also makes you more focused in the follow-up learning process with our Mule-Dev-202 learning materials.
