NEW QUESTION # 251

Your company has recently acquired three growing startups in three different countries. You want to reduce overhead in infrastructure management and keep your costs low without sacrificing security and quality of service to your customers. How should you meet these requirements?

- A. Build a homogenous infrastructure at each subsidiary, and invest in training their engineers.
- B. Host all your subsidiaries' services on-premises together with your existing services.
- **C. Host all your subsidiaries' services together with your existing services on the public cloud.**
- D. Build a homogenous infrastructure at each subsidiary, and invest in hiring more engineers.

Answer: C

NEW QUESTION # 252

An organization wants to control what types of network traffic are allowed to enter and leave its network and access its applications. Which security measure should the organization use?

- **A. Firewall rules**
- B. Privileged access
- C. Encryption keys
- D. 2-Step Verification

Answer: A

NEW QUESTION # 253

Your organization needs to analyze data in order to gather insights into its daily operations. You only want to pay for the data you store and the queries you perform. Which Google Cloud product should your organization choose for its data analytics warehouse?

- A. BigQuery
- **B. Cloud SQL**
- C. Dataproc
- D. Cloud Spanner

Answer: B

NEW QUESTION # 254

An organization needs to store daily transactional data such as customer records and purchase history. The data follows a consistent schema and is cross-referenced. Which type of service should the organization use?

- A. Non-relational database
- B. Data warehouse
- C. Data lake
- **D. Relational database**

Answer: D

Explanation:

Relational databases are ideal for storing transactional data that follows a consistent schema and requires cross-referencing (e.g., customer records and purchase history). They provide ACID (Atomicity, Consistency, Isolation, Durability) compliance, which is essential for reliable transaction processing.

Option C: Relational database is correct because it is specifically designed for structured data with a consistent schema and supports complex queries and cross-referencing of data, which is essential for transactional systems.
