But in order to pass ISC certification CISSP exam many people spent a lot of time and energy to consolidate knowledge and didn't pass the exam. This is not cost-effective. If you choose Free4Torrent's product, you can save a lot of time and energy to consolidate knowledge, but can easily pass ISC Certification CISSP Exam. Because Free4Torrent's specific training material about ISC certification CISSP exam can help you 100% pass the exam. If you fail the exam, Free4Torrent will give you a full refund.

ISC CISSP (Certified Information Systems Security Professional) Exam is one of the most highly regarded and sought-after certifications in the field of information security. It is an internationally recognized credential that demonstrates an individual's proficiency in designing, implementing, and managing security programs for organizations. CISSP exam is designed to ensure that candidates have the necessary knowledge and skills to protect organizations against cyber threats and attacks.

The CISSP Certification Exam covers a wide range of topics related to information security, including security and risk management, asset security, security engineering, communication and network security, identity and access management, security assessment and testing, security operations, and software development security. CISSP exam consists of 250 multiple-choice questions and lasts for six hours. The passing score for the exam is 700 out of 1000.

## ISC Certified Information Systems Security Professional (CISSP) Sample Questions (Q1629-Q1634):

**NEW QUESTION # 1629**

Which of the following is true of Service Organization Control (SOC) reports?

- A. SOC 3 Type 2 reports assess internal controls for financial reporting
- **B. SOC 2 Type 2 reports include information of interest to the service organization's management**
- C. SOC 2 Type 2 reports assess internal controls for financial reporting
- D. SOC 1 Type 2 reports assess the security, confidentiality, integrity, and availability of an organization's controls

**Answer: B**

**NEW QUESTION # 1630**

Which of the following wraps the decryption key of a full disk encryption implementation and ties the hard disk drive to a particular device?

- A. Preboot eXecution Environment (PXE)
- B. Simple Key-Management for Internet Protocol (SKIP)
- **C. Trusted Platform Module (TPM)**
- D. Key Distribution Center (KDC)

**Answer: C**

**NEW QUESTION # 1631**

Which of the following is the PRIMARY type of cryptography required to support non-repudiation of a digitally signed document?

- **A. Asymmetric**
- B. Hashing
- C. Symmetric
- D. Message Digest (MD)

**Answer: A**

**NEW QUESTION # 1632**

What are the components of an object's sensitivity label?

- A. A single classification and a single compartment.
- B. A Classification Set and user credentials.
- C. A Classification Set and a single Compartment.
- **D. A single classification and a Compartment Set.**

**Answer: D**

Explanation:

Explanation/Reference:

Explanation:

An object's sensitivity label contains one classification and multiple categories which represent compartments of information within a system.

When the MAC model is being used, every subject and object must have a sensitivity label, also called a security label. It contains a classification and different categories. The classification indicates the sensitivity level, and the categories enforce need-to-know rules. The classifications follow a hierarchical structure, with one level being more trusted than another.

However, the categories do not follow a hierarchical scheme, because they represent compartments of information within a system. The categories can correspond to departments (UN, Information Warfare, Treasury), projects (CRM, AirportSecurity, 2011Budget), or management levels. In a military environment, the classifications could be top secret, secret, confidential, and unclassified. Each classification is more trusted than the one below it. A commercial organization might use confidential, proprietary, corporate, and sensitive. The definition of the classification is up to the organization and should make sense for the environment in which it is used.

Incorrect Answers:

A: An object's sensitivity label contains a single classification, not a classification set and multiple categories (compartments), not a single compartment.

B: An object's sensitivity label contains multiple categories (compartments), not a single compartment.

C: An object's sensitivity label contains a single classification, not a classification set. Furthermore, an object's sensitivity label does not contain user credentials.

### NEW QUESTION # 1633

What is the difference between Advisory and Regulatory security policies?

- A. there is no difference between them
- B. regulatory policies are high level policy, while advisory policies are very detailed
- C. Advisory policies are mandated while Regulatory policies are not
- D. **Advisory policies are not mandated. Regulatory policies must be implemented.**

**Answer: D**

Explanation:

Explanation/Reference:

Explanation:

Regulatory policy is not often something that an organization can work around. Rather, they must work with them. Governments and regulatory and governing bodies that regulate certain professions, such as medicine and law typically create this type of policy. In general, organizations that operate in the public interest, such as safety or the management of public assets, or that are frequently held accountable to the public for their actions, are users of regulatory policy. This type of policy consists of a series of legal statements that describe in detail what must be done, when it must be done, who does it, and can provide insight as to why it is important to do it.

An advisory policy provides recommendations often written in very strong terms about the action to be taken in a certain situation or a method to be used. While this appears to be a contradiction of the definition of policy, advisory policy provides recommendations. It is aimed at knowledgeable individuals with information to allow them to make decisions regarding the situation and how to act. Because it is an advisory policy, the enforcement of this policy is not applied with much effort. However, the policy will state the impact for not following the advice that is provided within the policy.

Incorrect Answers:

A: There is a difference between Advisory and Regulatory security policies.

B: Advisory policies are not very detailed.

D: Advisory policies are not mandated and Regulatory policies are.
