NEW QUESTION # 49

During the upgrade process of VMware tools on virtual machines, what is the correct sequence to ensure smooth compatibility?

- A. Upgrade the virtual machines first, followed by the ESXi hosts and then the vCenter Server
- B. Upgrade the vCenter Server first, followed by the ESXi hosts and then the virtual machines
- C. Upgrade the ESXi hosts first, followed by the virtual machines and then the vCenter Server
- D. Upgrade the vSphere Client first, followed by the ESXi hosts and then the virtual machines

Answer: A

NEW QUESTION # 50

An architect is designing a new VMware software-defined data center (SDDC) that will consist of 100 branch sites connected to a single VMware vCenter Server within the primary data center. To allow for the use of existing automation scripts, there is a requirement to replicate the names of the virtual distributed port groups across all sites. The procurement team purchases licensing and there is no further budget allocated.

Which design decision should the architect make to meet this requirement?

- A. A new host and cluster folder will be created for each branch site
- B. A new vCenter Server will be deployed for each branch site
- C. The automation script will be updated to reflect unique naming for each site
- D. A new virtual data center will be created for each branch site

Answer: D

NEW QUESTION # 51

An architect is designing a new platform. Existing virtual machines will be migrated to this platform.

The migration process is defined as follows:

- A migration host will be loaded with virtual machines from the old platform
- The migration host will be added to the desired new cluster.
- Virtual machines compute and storage will be migrated to desired hosts in the new platform.
- The migration host will be removed and added back to the old platform so the process can restart.

The following characteristics are noted:

- A total of 800 virtual machines will be migrated.
- A total of 50 hosts will be available in the new platform.
- The migration host will have four paths to each of 512 connected LUNs.

Which size vCenter Server should be specified for the new platform?

- A. Large
- B. Small
- C. Medium
- D. Tiny

Answer: A

NEW QUESTION # 52

What does a single-site deployment design entail?

- A. Deploying vCenter Server on multiple physical servers for load balancing.
- B. Deploying vCenter Server across multiple data centers in different regions.
- C. Deploying vCenter Server in a highly available configuration within a single data center.
- D. Deploying vCenter Server on a single virtual machine.

Answer: C

NEW QUESTION # 53

What is the purpose of a virtual data center design?

- A. To determine the hardware and infrastructure requirements for vCenter Server.
- B. To specify the expected levels of system performance and responsiveness.

- C. To create a logical representation of the virtualized data center environment.
- D. To ensure the design meets the required industry regulations and standards.

Answer: C
