

# 2026 MuleSoft-Integration-Architect-I Latest Exam Discount 100% Pass | High Pass-Rate Salesforce Certified MuleSoft Integration Architect I Actual Test Pdf Pass for sure

P.S. Free 2026 Salesforce MuleSoft-Integration-Architect-I dumps are available on Google Drive shared by Dumpleader: [https://drive.google.com/open?id=1oWs9TaQBqtHGu5AjNoawnjBGWY4Y4a\\_Q](https://drive.google.com/open?id=1oWs9TaQBqtHGu5AjNoawnjBGWY4Y4a_Q)

We offer you free demo to you to have a try before buying MuleSoft-Integration-Architect-I study guide, therefore you can have a better understanding of what you are going to buy. Free demo can be find in our website, if you are quite satisfied with the free demo, just add the MuleSoft-Integration-Architect-I study guide to shopping cart, after you buy it, our system will send the downloading link and password to you within ten minutes, and you can start your learning right now. Moreover, we offer you free update for one year after you buy the MuleSoft-Integration-Architect-I Exam Dumps, therefore you can get the latest version timely.

## Salesforce MuleSoft-Integration-Architect-I Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Designing for the Runtime Plane Technology Architecture: It includes analyzing Mule runtime clusters, designing solutions for CloudHub, choosing Mule runtime domains, leveraging Mule 4 class loader isolation, and understanding the reactive event processing model.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Designing and Developing Mule Applications: It includes selecting application properties, using fundamental features, designing with core routers, understanding the Salesforce Connector, and leveraging core connectors.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Designing Integration Solutions to Meet Persistence Requirements: It addresses the usage of VM queues and connectors, object stores and services, and stateful components configured with object stores.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Applying DevOps Practices and Operating Integration Solutions: Its sub-topics are related to designing CI</li> <li>CD pipelines with MuleSoft plugins, automating interactions with Anypoint Platform, designing logging configurations, and identifying Anypoint Monitoring features.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Designing Automated Tests for Mule Applications: This topic covers unit test suites, and scenarios for integration and performance testing.</li> </ul>
Topic 6	<ul style="list-style-type: none"> <li>Designing Integration Solutions to Meet Security Requirements: This topic emphasizes securing access to the Anypoint Platform and APIs, using Anypoint Security, counteracting security vulnerabilities, and understanding audit logging capabilities.</li> </ul>

## 2026 Professional MuleSoft-Integration-Architect-I Latest Exam Discount | 100% Free MuleSoft-Integration-Architect-I Actual Test Pdf

Dumpleader offers MuleSoft-Integration-Architect-I actual exam dumps in easy-to-use PDF format. It is a portable format that

works on all smart devices. Questions in the MuleSoft-Integration-Architect-I PDF can be studied at any time from any place. Furthermore, Salesforce Certified MuleSoft Integration Architect I (MuleSoft-Integration-Architect-I) PDF exam questions are printable. It means you can avoid eye strain by preparing real questions in a hard copy.

## Salesforce Certified MuleSoft Integration Architect I Sample Questions (Q64-Q69):

### NEW QUESTION # 64

Refer to the exhibit.

A business process involves the receipt of a file from an external vendor over SFTP. The file needs to be parsed and its content processed, validated, and ultimately persisted to a database. The delivery mechanism is expected to change in the future as more vendors send similar files using other mechanisms such as file transfer or HTTP POST.

What is the most effective way to design for these requirements in order to minimize the impact of future change?

- **A. Create an API that receives the file and invokes a Process API with the data contained in the file, then have the Process API process the data using a MuleSoft Batch Job and other System APIs as needed**
- B. Use a MuleSoft Scatter-Gather and a MuleSoft Batch Job to handle the different files coming from different sources
- C. Create a Process API to receive the file and process it using a MuleSoft Batch Job while delegating the data save process to a System API
- D. Use a composite data source so files can be retrieved from various sources and delivered to a MuleSoft Batch Job for processing

**Answer: A**

Explanation:

\* Scatter-Gather is used for parallel processing, to improve performance. In this scenario, input files are coming from different vendors so mostly at different times. Goal here is to minimize the impact of future change. So scatter Gather is not the correct choice.

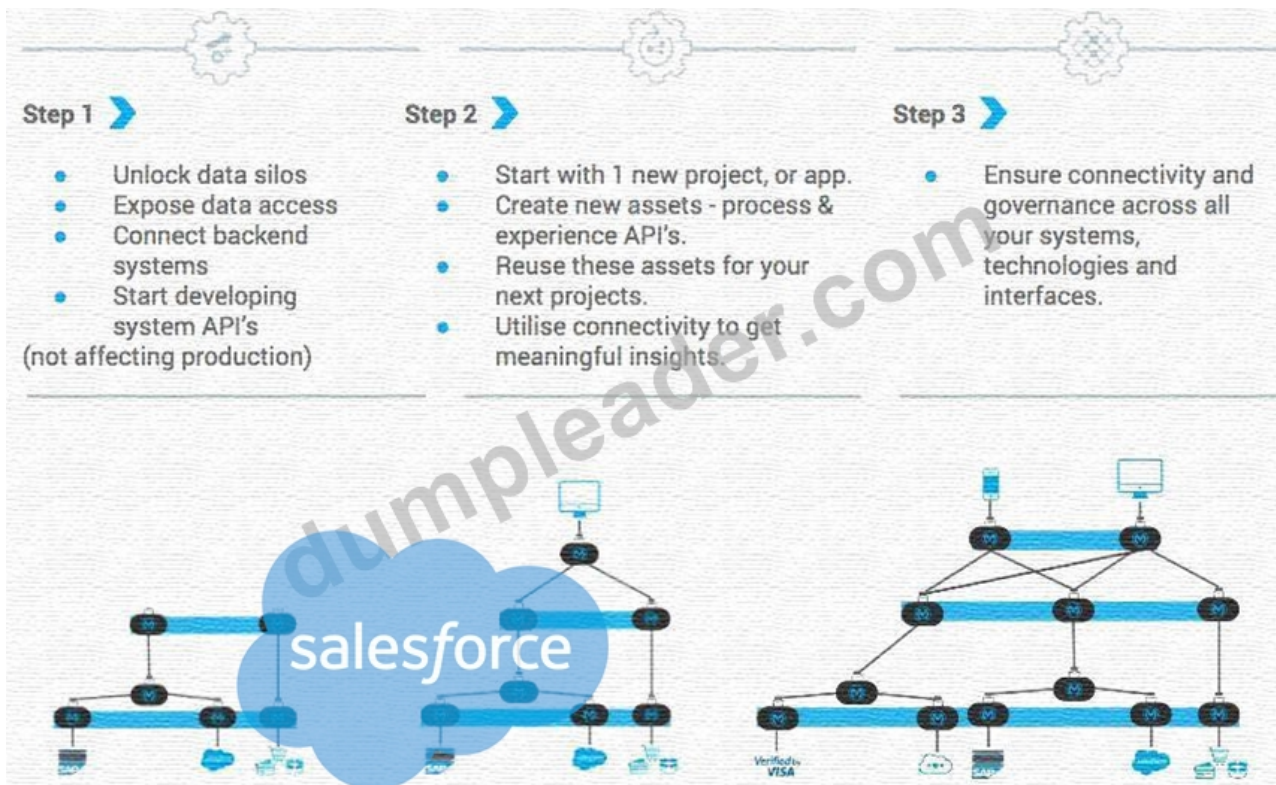

\* If we use 1 API to receive all files from different Vendors, any new vendor addition will need changes to that 1 API to accommodate new requirements. So Option A and C are also ruled out.

\* Correct answer is Create an API that receives the file and invokes a Process API with the data contained in the file, then have the Process API process the data using a MuleSoft Batch Job and other System APIs as needed. Answer to this question lies in the API led connectivity approach.

\* API-led connectivity is a methodical way to connect data to applications through a series of reusable and purposeful modern APIs that are each developed to play a specific role - unlock data from systems, compose data into processes, or deliver an experience. System API : System API tier, which provides consistent, managed, and secure access to backend systems. Process APIs : Process APIs take core assets and combines them with some business logic to create a higher level of value. Experience APIs : These are designed specifically for consumption by a specific end-user app or device.

So in case of any future plans , organization can only add experience API on addition of new Vendors, which reuse the already existing process API. It will keep impact minimal.

### NEW QUESTION # 65

An auto mobile company want to share inventory updates with dealers D1 and D2 asynchronously and concurrently via queues Q1 and Q2. Dealer D1 must consume the message from the queue Q1 and dealer D2 to must consume a message from the queue Q2. Dealer D1 has implemented a retry mechanism to reprocess the transaction in case of any errors while processing the inventers updates. Dealer D2 has not implemented any retry mechanism.

How should the dealers acknowledge the message to avoid message loss and minimize impact on the current implementation?

- A. Dealer D1 must use auto acknowledgement and dealer D2 can use manual acknowledgement and acknowledge the message after successful processing
- B. Dealer D1 and dealer D2 must use AUTO acknowledgement and acknowledge the message after successful processing
- C. Dealer D1 can use auto acknowledgement and dealer D2 can use IMMEDIATE acknowledgement and acknowledge the message of successful processing
- **D. Dealer D1 can use AUTO acknowledgement and dealer D2 must use manual acknowledgement and acknowledge the message after successful processing**

**Answer: D**

Explanation:

\* Dealer D1 - AUTO Acknowledgment:

\* Dealer D1, which has a retry mechanism, can use AUTO acknowledgment. This means that the message is acknowledged automatically once received. The retry mechanism will handle any processing errors and reprocess the message if needed.

\* Dealer D2 - Manual Acknowledgment:

\* Dealer D2, which does not have a retry mechanism, must use manual acknowledgment. This approach allows D2 to acknowledge the message only after it has been successfully processed, ensuring no message is lost due to processing errors.

\* Ensuring Message Delivery:

\* Using manual acknowledgment for Dealer D2 ensures that the message is not lost and can be reprocessed if an error occurs during processing, which is crucial since it lacks a retry mechanism.

\* MuleSoft Documentation on JMS Acknowledgment

\* Best practices for Reliable Messaging

### NEW QUESTION # 66

An organization is choosing between API-led connectivity and other integration approaches.

According to MuleSoft, which business benefits is associated with an API-led connectivity approach using Anypoint Platform?

- A. improved security through adoption of monolithic architectures
- B. Higher outcome repeatability through centralized development
- C. Greater project predictability through tight coupling of systems
- **D. Increased developer productivity through self-service of API assets**

**Answer: D**

#### NEW QUESTION # 67

What API policy would LEAST likely be applied to a Process API?

- A. Client ID enforcement
- B. Custom circuit breaker
- C. Rate limiting
- **D. JSON threat protection**

**Answer: D**

Explanation:

Key to this question lies in the fact that Process API are not meant to be accessed directly by clients. Lets analyze options one by one. Client ID enforcement : This is applied at process API level generally to ensure that identity of API clients is always known and available for API-based analytics Rate Limiting : This policy is applied on Process Level API to secure API's against degradation of service that can happen in case load received is more than it can handle Custom circuit breaker : This is also quite useful feature on process level API's as it saves the API client the wasted time and effort of invoking a failing API. JSON threat protection : This policy is not required at Process API and rather implemented as Experience API's. This policy is used to safeguard application from malicious attacks by injecting malicious code in JSON object. As ideally Process API's are never called from external world , this policy is never used on Process API's Hence correct answer is JSON threat protection MuleSoft Documentation Reference : <https://docs.mulesoft.com/api-manager/2.x/policy-mule3-json-threat>

#### NEW QUESTION # 68

An organization has deployed runtime fabric on an eight node cluster with performance profile. An API uses and non persistent object store for maintaining some of its state data. What will be the impact to the state data if server crashes?

- A. State data is preserved
- B. State data is rolled back to a previously saved version
- C. State data is preserved as long as more than one more is unaffected by the crash
- **D. State data is lost**

**Answer: D**

#### NEW QUESTION # 69

.....

Our MuleSoft-Integration-Architect-I exam prep has already become a famous brand all over the world in this field since we have engaged in compiling the MuleSoft-Integration-Architect-I practice materials for more than ten years and have got a fruitful outcome. You are welcome to download the free demos to have a general idea about our MuleSoft-Integration-Architect-I study questions. Since different people have different preferences, we have prepared three kinds of different versions of our MuleSoft-Integration-Architect-I training guide: PDF, Online App and software.
