

Cisco 300-540 Sample Exam - Test 300-540 Simulator Free

Download Cisco 300-540 Exam Dumps for Best Preparation

Exam : 300-540

Title : Designing and Implementing
Cisco Service Provider
Cloud Network
Infrastructure

Just register for the 300-540 examination and download 300-540 updated pdf dumps today. With these 300-540 real dumps you will not only boost your Designing and Implementing Cisco Service Provider Cloud Network Infrastructure test preparation but also get comprehensive knowledge about the Designing and Implementing Cisco Service Provider Cloud Network Infrastructure examination topics.

Cisco 300-540 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Security: This section of the exam measures the skills of Network Security Engineers and covers the implementation of infrastructure-level protection in cloud and NFVI ecosystems. It includes topics such as ACLs, uRPF, RTBH, router hardening, BGP flowspec, TACACS, and MACSEC. Candidates should understand DoS mitigation methods and apply security practices within NFVI, focusing on API protection, securing the control and management plane, and segmentation strategies in service provider cloud environments. The domain also evaluates basic knowledge of TLS, mTLS, and general cloud security solutions related to DNS protection, zero-day defenses, and malware detection.

Topic 2	<ul style="list-style-type: none"> • Cloud Interconnect: This section of the exam measures the skills of Service Provider Network Engineers and covers how large networks interconnect with cloud platforms and carrier-neutral facilities. Candidates are expected to understand various connectivity options to cloud providers, customer sites, and other neutral facilities, as well as evaluate WAN connectivity models such as direct connect, MPLS or segment routing, and IPsec VPN links. The domain also includes the ability to troubleshoot advanced data center interconnect solutions, including EVPN VXLAN, EVPN over SR • MPLS, ACI-based connectivity, and pseudowire architectures supporting cloud-to-cloud and cloud-to-edge communication.
Topic 3	<ul style="list-style-type: none"> • Service Assurance and Optimization: This section of the exam measures the skills of Cloud Operations Engineers and covers assurance mechanisms used to maintain performance, stability, and visibility across NFVI environments. It includes network assurance concepts such as MANO frameworks, VNF workload monitoring, VIM control plane KPIs, and streaming telemetry with gRPC and gNMI. Candidates must understand cloud infrastructure performance monitoring tools, including SR-PM, NetFlow, IPFIX, syslog, SNMP traps, RMON, cloud agents, and automated fault management systems. The domain also touches on diagnosing NFVI-related errors and optimizing VNFs using techniques such as SR-IOV and software-accelerated virtual switching technologies like DPDK and VPP.
Topic 4	<ul style="list-style-type: none"> • High Availability: This section of the exam measures the skills of Cloud Infrastructure Architects and covers the design and implementation of redundancy and resiliency mechanisms in virtualized network functions and distributed cloud platforms. It includes data plane redundancy for VNFs, high availability within a single VIM control plane, and resilient compute, vNIC, and top-of-rack switching. The exam requires an understanding of multi-homing, EVLAG configurations, virtual private cloud deployment, and ECMP strategies for NFVI integrations with physical routing protocols such as BGP, OSPF, and IS-IS. Candidates must also recommend suitable high-availability models involving DNS, routing, and load balancing.
Topic 5	<ul style="list-style-type: none"> • Virtualized Architecture: This section of the exam measures the skills of Cloud Network Engineers and covers the foundational concepts of virtualized infrastructures used in modern service provider and cloud environments. Candidates are expected to understand constraints in IaaS designs, determine appropriate cloud service models, and demonstrate awareness of container orchestration compared to traditional virtual machines. The exam also evaluates the ability to implement key virtualization functions such as NFV, VNF, NSO, and virtualized Cisco platforms. Learners must be able to deploy NFV with automation tools, manage VNF onboarding, work with NSO-driven orchestration, and use protocols like NETCONF, RESTCONF, REST APIs, and gNMI within automated cloud ecosystems. A general understanding of supporting platforms such as OpenStack also forms part of the required knowledge in this domain.

Test 300-540 Simulator Free & Latest 300-540 Test Cost

We would like to benefit our customers from different countries who decide to choose our 300-540 study guide in the long run, so we cooperation with the leading experts in the field to renew and update our 300-540 study materials. We can assure you that you will get the latest version of our 300-540 Training Materials for free from our company in the whole year after payment. Do not miss the opportunity to buy the best 300-540 preparation questions in the international market which will also help you to advance with the times.

Cisco Designing and Implementing Cisco Service Provider Cloud Network Infrastructure Sample Questions (Q102-Q107):

NEW QUESTION # 102

SR-IOV technology improves network performance by:

- A. Decreasing the number of available network paths
- B. Increasing CPU utilization for network tasks
- C. Allowing VMs direct access to physical network interfaces

- D. Encrypting all data in transit

Answer: C

NEW QUESTION # 103

A zero-day exploit refers to:

- A. A vulnerability that the attacker discovers before the developer
- B. An attack that occurs on the same day a security patch is released
- C. A bug that is fixed immediately upon discovery
- D. A flaw that has been known for at least a day

Answer: A

NEW QUESTION # 104

Which of the following are benefits of using streaming telemetry for network assurance? (Select two)

- A. Increased network latency
- B. Real-time data collection
- C. Reduced monitoring capabilities
- D. Improved scalability and flexibility

Answer: B,D

NEW QUESTION # 105

Router hardening involves:

- A. Using default passwords
- B. Disabling unnecessary services and interfaces
- C. Decreasing logging level
- D. Allowing all inbound traffic

Answer: B

NEW QUESTION # 106

Pseudowires are typically used for:

- A. Directly connecting two locations without encryption
- B. Providing a dedicated, high-latency connection between data centers
- C. Emulating a physical wire over a MPLS network
- D. Decreasing the overall security of a network

Answer: C

NEW QUESTION # 107

.....

The clients can download our 300-540 exam questions and use our them immediately after they pay successfully. Our system will send our 300-540 learning prep in the form of mails to the client in 5-10 minutes after their successful payment. The mails provide the links and if only the clients click on the links they can log in our software immediately to learn our 300-540 Guide materials. It is fast and convenient!
